## Cotton Broad-Woven Goods

First Quarter 1966 To Third Quarter 1967

FOR RELEASE: January 26, 1968

SERIES: M22T.1

A review of the information published in this series has revealed some reporting errors of toweling and combed bed sheeting fabrics for selected fabric descriptions. The following changes should be made in this publication of M22T.1, Cotton Broad-Woven Goods, for the first quarter 1966 through the third quarter 1967. In addition, you should note in your review of these data that the significant revisions are indicated with an asterisk.

U.S. DEPARTMENT OF COMMERCE Alexander B. Trowbridge, Secretary

William H. Shaw, Assistant Secretary, Economic Affairs  
BUREAU OF THE CENSUS A. Ross Eckler, Director

## Second Quarter 1966

 MASS. INST. TECH.  
 FEB 14 1967  
 LIBRARY

142-A

FOR RELEASE: December 30, 1966

D255

SERIES: M22T.1(66)-1

Cotton broad-woven fabrics production in the second quarter of 1966 was one percent below previous quarter.

Production of colored yarn fabrics was 8 percent below the previous quarter's level, while fine cotton fabrics decreased 5 percent and duck and allied fabrics 4 percent. Other fabrics and specialties increased four percent, and towelings 2 percent. Other fabric classes showed changes of only one percent.

**COVERAGE**—The figures included in this report represent the entire production of cotton broad-woven fabrics over 12 inches wide. Estimates have been included for all manufacturers whose reports were not received in time for tabulation. Such companies accounted for approximately 2 percent of the total production.

**COVERAGE OF INDIVIDUAL TABLES**—The information contained in this report is collected on Census Form

M22T, Broad Fabrics (Except Knit): Woven, Nonwoven, and Felts. A separate report is obtained from each mill, although in some instances the "mill" reported as one unit to the Census Bureau constitutes two or more buildings at the same or nearby locations. In the tabulation of these reports, the production figures shown in tables 1, and 2 represent total production of cotton fabrics by all known weaving mills regardless of their primary activity. However, because a single report is collected from an individual mill, the information shown in tables 3, 4, and 5 relates to the entire activity of all mills primarily producing cotton fabrics. Insofar as these mills produce tire cord or man-made fiber or wool fabrics as secondary products, the yarn consumption or loom activity for such fabrics would be included in this report. Where cotton fabrics are secondary products of a mill primarily producing man-made fiber fabrics, yarns consumed in their manufacture are excluded from this report. They are included in Current Industrial Reports relating to man-made fiber broad-woven fabrics.

Table 1.--SUMMARY OF PRODUCTION, BY CLASS OF FABRIC

(Thousands of linear yards)

Type of goods	1966	
	April-June (Preliminary)	January-March <sup>1</sup>
COTTON BROAD-WOVEN GOODS, TOTAL.....	2,270,978	2,294,729
Duck and allied fabrics.....	65,753	68,620
Sheeting and allied coarse and medium yarn fabrics.....	676,706	683,869
Print cloth yarn fabrics.....	798,307	794,170
Colored yarn fabrics.....	104,836	114,239
Towels, toweling, and dishcloths.....	170,796	168,058
Mapped fabrics, blankets and blanketing.....	38,769	38,473
Fine cotton fabrics.....	298,895	315,150
Other woven cotton fabrics and specialties.....	116,916	112,150

<sup>1</sup>Revised.

Inquiries concerning these figures should be addressed to the U.S. Department of Commerce, Bureau of the Census, Industry Division, Washington, D.C. 20233.

# Cotton Broad-Woven Goods

## Third Quarter 1966

FOR RELEASE: February 28, 1967

D255

SERIES: M22T,1(66)-2

Cotton broad-woven fabrics production in the second quarter of 1966 was 9 percent below previous quarter.

Production of duck and allied fabrics increased one percent while all other fabric classes decreased. Print cloth fabrics were 12 percent below the previous quarter's level, while toweling decreased 11 percent, and fine cotton fabrics 10 percent. Other fabric classes showed decreases of from 4 to 8 percent.

**COVERAGE**--The figures included in this report represent the entire production of cotton broad-woven fabrics over 12 inches wide. Estimates have been included for all manufacturers whose reports were not received in time for tabulation. Such companies accounted for approximately 2 percent of the total production.

**COVERAGE OF INDIVIDUAL TABLES**--The information contained in this report is collected on Census Form M22T, Broad Fabrics (Except Knit): Woven, Nonwoven,

and Felts. A separate report is obtained from each mill, although in some instances the "mill" reported as one unit to the Census Bureau constitutes two or more buildings at the same or nearby locations. In the tabulation of these reports, the production figures shown in tables 1 and 2 represent total production of cotton fabrics by all known weaving mills regardless of their primary activity. However, because a single report is collected from an individual mill, the information shown in tables 3, 4, and 5 relates to the entire activity of all mills primarily producing cotton fabrics. Insofar as these mills produce tire cord or man-made fiber or wool fabrics as secondary products, the yarn consumption or loom activity for such fabrics would be included in this report. Where cotton fabrics are secondary products of a mill primarily producing man-made fiber fabrics, yarns consumed in their manufacture are excluded from this report. They are included in Current Industrial Reports relating to man-made fiber broad-woven fabrics.

Table 1.--SUMMARY OF PRODUCTION, BY CLASS OF FABRIC

(Thousands of linear yards)

Type of goods	1966	
	July-September (Preliminary)	April-June <sup>a</sup>
COTTON BROAD-WOVEN GOODS, TOTAL.....	2,085,821	2,287,392
Duck and allied fabrics.....	70,010	69,305
Sheeting and allied coarse and medium yarn fabrics.....	636,050	676,740
Print cloth yarn fabrics.....	716,126	811,117
Colored yarn fabrics.....	100,679	104,847
Towels, toweling, and dishcloths.....	151,992	170,736
Napped fabrics, blankets and blanketing.....	35,705	38,954
Fine cotton fabrics.....	267,446	298,941
Other woven cotton fabrics and specialties.....	107,813	116,692

<sup>a</sup> Revised.

Inquiries concerning these figures should be addressed to the U.S. Department of Commerce, Bureau of the Census, Industry Division, Washington, D.C. 20233.

## Cotton Broad-Woven Goods

Fourth Quarter 1966

142-1

D255

FOR RELEASE: May 2, 1967

SERIES: M22T.1(66)-3

The information contained in this report is collected on Census Form M22T, Broad Fabrics (Except Knit): Woven, Nonwoven, and Felts. A separate report is obtained from each mill, although in some instances the "mill" reported as one unit to the Census Bureau constitutes two or more buildings at the same or nearby locations. In the tabulation of these reports, the production figures shown in tables 1 and 2 represent total production of cotton fabrics by all known weaving mills regardless of their primary activity. However, because a single report is collected from an individual mill, the information shown in

tables 3, 4, and 5 relates to the entire activity of all mills primarily producing cotton fabrics. Insofar as these mills produce tire cord or man-made fiber or wool fabrics as secondary products, the yarn consumption or loom activity for such fabrics would be included in this report. Where cotton fabrics are secondary products of a mill primarily producing man-made fiber fabrics, yarns consumed in their manufacture are excluded from this report. They are included in Current Industrial Reports relating to man-made fiber broad-woven fabrics.

Table 1.--SUMMARY OF PRODUCTION, BY CLASS OF FABRIC

(Thousands of linear yards)

Type of goods	1966	
	Oct.-Dec. (Preliminary)	July-Sept. <sup>r</sup>
COTTON BROAD-WOVEN GOODS, TOTAL.....	2,180,710	2,083,202
Duck and allied fabrics.....	77,715	69,074
Sheeting and allied coarse and medium yarn fabrics.....	660,681	633,950
Print cloth yarn fabrics.....	744,644	715,012
Colored yarn fabrics.....	105,382	100,674
Towels, toweling, and dishcloths.....	161,751	154,399
Napped fabrics, blankets and blanketing.....	41,429	35,724

## 142-A Cotton Broad-Woven Goods

Dewey

1965 and 1966

FOR RELEASE: February 23, 1968

SERIES: M22T.1(66)-4

The data shown in this report summarizes the information published in the quarterly M22T.1 series. Except for survey item codes 2402, 2404, 2644, and 2646, no revisions have been made in the detailed figures.

## DESCRIPTION OF SURVEY

The statistics in this publication were published in Census quarterly series M22T.1, Cotton Broad-Woven Goods, from a sample of mills accounting for approximately 98 percent of the total U.S. production of cotton broad-woven goods. Estimates have been included for manufacturers whose reports were not received and are based on their production as reported in the 1965 annual survey.

The data in this report are not adjusted for seasonal variation or number of working days.

## COVERAGE

The information contained in this report is collected on Census quarterly form M22T, "Broad Fabrics (Except Knit): Woven, Non-woven, and Felts." A separate report is requested from each mill, although in some instances the "mill" reported as one unit to the Census Bureau constitutes more than one location.

Fabrics woven on commission are reported in this series by the commission mill, not by the company for which the work is contracted.

## REVISED COTTON CLASSIFICATIONS

The product classifications for cotton fabrics were revised substantially in 1966 in order to reflect current production and marketing categories more accurately. The 1966 statistics are thus not directly comparable to 1965 and previous years.

In this report, 1966 detailed data (with revisions where necessary) are shown in table 2A but 1965 figures comparable are shown in table 2B.

## COVERAGE OF INDIVIDUAL TABLES

The production figures shown in tables 1 and 2 represent total production of the specified fabrics by all weaving mills regardless of their primary activity. However, because a single report is collected from an individual mill, the information shown in tables 3, 4, 5, and 6 relates to the entire activity of all mills primarily producing cotton fabrics. Insofar as these mills produced other fabrics (manmade fiber or wool) as a secondary product, the yarn consumption or loom activity for such fabrics would be included in this report. Similarly, the yarns consumed in the manufacture of cotton fabrics produced as a secondary product in a mill primarily producing manmade fiber fabrics is excluded from this report and included in the Current Industrial Reports publication relating to manmade fiber broad-woven fabrics.

Inquiries concerning these figures should be addressed to the U.S. Department of Commerce, Bureau of the Census, Industry Division, Washington, D.C. 20233.

For sale by the Bureau of the Census, Washington, D.C. 20233  
Price 25 cents - \$1.00 per year

U.S. DEPARTMENT OF COMMERCE Alexander B. Trowbridge, Secretary  
William H. Shaw, Assistant Secretary, Economic Affairs  
BUREAU OF THE CENSUS A. Ross Eckler, Director

## WOOLEN AND WORSTED MILLS

Mills with woollen and worsted machinery which primarily produce manmade fiber fabrics do not report yarn consumption data. Separate data on knit cloth are published by the Bureau of the Census in quarterly series M22K, Shipments of Knit Cloth, Including Interplant Transfers, beginning with the fourth quarter 1966. Data are available upon request.

## DEFINITION OF TERMS

Broad Fabrics--Fabric over 12" in width, as made.

Cotton Fabrics--Includes fabric wholly or chiefly by weight of cotton.

Blends, Chiefly Cotton--Includes fabrics chiefly by weight of cotton and containing other fibers, such as nylon, polyester, etc.

Blends and Mixtures--Fabrics which are made from more than one fiber are classified according to whether the fabric is chiefly cotton, wool, or manmade fiber. As examples, a fabric made of 55 percent cotton and 45 percent rayon is included in the cotton report; a fabric which is 40 percent cotton, 30 percent rayon, and 30 percent acetate is classified in the manmade fibers report. Blends and mixtures which are by weight 50 percent of one fiber and 50 percent of another fiber are classified according to the fiber of greatest value. As an example, a fabric which is 50 percent polyester and 50 percent cotton is classified as polyester. Fabrics which are 95 percent or more of one fiber are included in the 100 percent classification for that fiber.

ACKNOWLEDGMENTS--This report was prepared in the Industry Division under the direction of Robert J. Nealon, Chief, Foods, Textiles, and Apparel. Evelyn O. Denny, Chief, Textiles, assisted by Charles T. Lee, was directly responsible for the review of the data and preparation of the report.

<sup>1</sup>The information for 1965 shown in this publication does not reflect the corrections noted in Series M22T(65)-Supplement, Broad-Woven Fabrics--Blends and Mixtures released on July 20, 1967. Revised quarterly figures in 1965 were not requested of the respondent and are thus, not available for inclusion in this publication.

<sup>2</sup>Data are for a 53-week reporting period.

Table 2B--PRODUCTION OF COTTON BROAD-WOVEN GOODS, BY TYPE, BY QUARTER: 1965--Continued

(Thousands of linear yards)

Type of goods	Reference list number	1965	1965 <sup>1</sup>			
			October-December	July-September	April-June	January-March
PRINT CLOTH YARN FABRICS (CARDED YARNS APPROXIMATELY 28s to 42s)--Continued						
Carded broadcloths--all widths.....	1365	389,379	94,135	92,785	99,448	103,011
109 x 58.....	1365	64,590	14,902	20,769	13,733	15,186
98/100 x 58/60.....	1367	(D)	(D)	(D)	(D)	(D)
80 x 56/60.....	1369	(D)	(D)	(D)	(D)	(D)
All other carded broadcloth constructions (including slub yarns)	1371	222,480	55,727	47,498	59,612	69,443
Carded poplins (print cloth warp yarn, including slub yarn).....	1378	49,516	11,577	11,369	13,274	13,296
Three leaf twills (print cloth yarns).....	1382	42,615	9,770	9,419	11,060	12,366
All other print cloth yarn constructions.....	1386	(D)	(D)	4,952	5,839	5,151
COLORED YARN FABRICS.....						
Denims, clothing (basis 28" width).....	1401	257,785	56,070	53,403	69,597	78,715
1.60 yd. and 2.00 yd.....	1401	89,118	19,931	17,930	25,443	25,814
2.20 yd.....	1406	44,556	9,431	10,791	10,044	14,290
2.45 and 3.00 yd.....	1411	22,872	4,364	4,184	5,333	8,991
All other clothing denims.....	1416	100,735	22,344	20,498	28,777	29,116
Cottonades, suiting coverts, pin stripes, pin checks, hickory stripes, etc.....	1422	23,954	5,742	6,037	6,321	5,854
Whipcords, Bedford cords, shirting coverts, (twill and plain weave)	1432	(D)	(D)	(D)	(D)	(D)
Chambrays and colored yarn shirtings (carded yarns).....	1441	(D)	(D)	(D)	(D)	(D)
36" - 3.90 yd.....	1441	(D)	(D)	(D)	(D)	(D)
All other carded yarn chambrays and shirtings.....	1446	(D)	(D)	(D)	(D)	(D)
Ginghams (except combed, part combed, and fine carded).....	1453	(D)	(D)	(D)	(D)	(D)
Seersuckers (except combed, part combed, and fine carded).....	1455	-	-	-	-	-
All other carded suiting woven with colored yarns.....	1461	78,747	16,319	17,617	21,291	23,520
All cotton.....	1461	(D)	(D)	(D)	(D)	(D)
Cotton and rayon and/or acetate, and cotton and wool mixtures (51 percent or more cotton).....	1467	(D)	(D)	(D)	(D)	(D)
Bed tickings woven, all constructions.....	1472	68,307	16,618	16,681	17,045	17,963
TOWELS, TOWELING, AND DISHCLOTHS.....						
Turkish and terry woven (including wash cloths and bathmats).....	1510	515,400	130,572	121,405	133,276	130,147
All cut mark or border towels, other than terry.....	1532	64,497	15,875	14,142	17,249	17,231
Cabinet and other continuous length toweling other than terry.....	1535	132,665	35,076	32,254	33,271	32,064
NAPPED FABRICS, BLANKETS AND BLANKETING.....						
Thermal blanketing.....	1601	9,845	2,417	2,119	2,574	2,735
Crib blanketing, all cotton and chiefly cotton.....	1602	6,279	1,462	1,479	1,633	1,705
Blanketing, other than crib.....	1605	25,691	5,744	5,911	7,351	6,685
Electric blanket shells.....	1605	-	-	-	-	-
Other blanketing.....	1609	25,691	5,744	5,911	7,351	6,685
100 percent cotton.....	1609	(D)	(D)	(D)	(D)	(D)
Cotton blends, chiefly cotton.....	1611	(D)	(D)	(D)	(D)	(D)
Outing flannels.....	1652	(D)	(D)	(D)	16,011	17,487
Work shirt flannels.....	1660	-	-	-	-	-
Canton flannels.....	1666	49,562	10,093	12,533	13,515	13,421
Interlining flannels.....	1672	(D)	(D)	(D)	3,870	3,229
All other napped fabrics.....	1689	9,567	2,229	2,422	2,614	2,302
FINE COTTON FABRICS (COMBED AND FINE CARDED).....						
Combed.....	1801	1,405,433	343,366	328,382	360,948	372,737
Broadcloths.....	1802	(D)	(D)	(D)	44,725	48,243
40" 136 x 60.....	1802	-	-	-	-	-
All other combed broadcloth.....	1808	(D)	(D)	(D)	(D)	(D)
Dimities and fancy handkerchief fabrics.....	1813	(D)	(D)	(D)	(D)	(D)
Lawns and organdies.....	1820	161,014	42,968	37,701	41,254	37,091
40" 88 x 80 - 6.90 yd.....	1820	11,561	2,943	3,219	3,171	2,208
All other combed lawns.....	1826	149,453	40,005	34,482	38,083	36,883
Marquisettes.....	1829	(D)	(D)	(D)	(D)	(D)
Oxfords (natural combed).....	1837	46,691	11,335	9,414	11,151	14,821
Piques.....	1839	(D)	(D)	(D)	(D)	(D)
Poplins.....	1842	31,633	12,192	7,753	6,911	4,777
Sateens.....	1844	24,903	5,480	6,600	6,551	6,272

# pins down data for counties

*Compiled by  
the  
Nation's  
Fact Finder*

County Business Patterns highlights the data businessmen, market researchers, and industrial and civic planners need for counties, standard metropolitan statistical areas, and States. Principal data items covered are employment, taxable payrolls, and the number and employment-size of reporting units for commercial and industrial organizations. Data are presented in individual paper-bound reports for States and for the United States. Prices vary for individual reports. Computer tapes and punchcards are also available. For further information, write to Bureau of the Census, Washington, D.C., 20233, or any Department of Commerce field office.

## Cotton Broad-Woven Goods

Dewey

First Quarter 1967

FOR RELEASE: August 30, 1967

SERIES: M22T.1(67)-1

The information contained in this report is collected on Census Form M22T, Broad Fabrics (Except Knit): Woven, Nonwoven, and Felts. A separate report is obtained from each mill, although in some instances the "mill" reported as one unit to the Census Bureau constitutes two or more buildings at the same or nearby locations. In the tabulation of these reports, the production figures shown in tables 1 and 2 represent total production of cotton fabrics by all known weaving mills regardless of their primary activity.

Table 1.--SUMMARY OF PRODUCTION, BY CLASS OF FABRIC

(Thousands of linear yards)

Type of goods	1967	1966
	Jan.-Mar. (preliminary)	Oct.-Dec. <sup>r</sup>
COTTON BROAD-WOVEN GOODS, TOTAL.....	2,214,493	2,175,424
Duck and allied fabrics.....	75,575	77,708
Sheeting and allied coarse and medium yarn fabrics.....	671,863	660,292
Print cloth yarn fabrics.....	770,679	742,724
Colored yarn fabrics.....	104,116	105,373
Towels, toweling, and dishcloths.....	167,583	163,180
Napped fabrics, blankets and blanketing.....	40,104	40,724
Fine cotton fabrics.....	267,201	270,230
Other woven cotton fabrics and specialties.....	117,372	115,193

<sup>r</sup>Revised.

Inquiries concerning these figures should be addressed to the U.S. Department of Commerce, Bureau of the Census, Industry Division, Washington, D.C. 20233.

For sale by the Bureau of the Census, Washington, D.C. 20233  
Price 25 cents - \$1.00 per year

- Represents zero. (D) Withheld to avoid disclosing figures for individual companies. <sup>1</sup>Revised.

(Z) Less than 1,000 linear yards.

<sup>1</sup>Figures shown in this table are also included in Table 2A for each applicable fabric.

Note: In order to avoid disclosure of individual company information, a number of figures have been withheld. In such cases, a letter symbol has been substituted, as follows, to indicate the approximate magnitude of the withheld information.

## Looms

- (aa) Less than 100 looms  
(bb) 100-249 looms  
(cc) 250-499 looms  
(dd) 500 or more looms

## Production

- (a) 100-499 M. linear yards  
(b) 500-999 M. linear yards  
(c) 1,000-2,499 M. linear yards  
(d) 2,500 M. linear yards and over

142-A. Cotton Broad-Woven Goods

Dewey

Second Quarter 1967

FOR RELEASE: October 5, 1967

SERIES: M22T.1(67)-2

Production of cotton broad-woven gray fabrics for the first half of 1967 was 5 percent below the comparable 1966 level and 2 percent more than the output for the last half of 1966. The aggregate for the second quarter of 1967 was 9 percent below previous quarter and 7 percent below the comparable quarter of last year.

Production of duck and allied fabrics increased 1 percent while all other fabric classes decreased. Print cloth fabrics were 12 percent below the previous quarter's level, while toweling decreased 11 percent, and fine cotton fabrics 10 percent. Other fabric classes showed decreases of from 4 to 8 percent.

**COVERAGE**—The figures included in this publication represent the entire known production of cotton broad-woven fabrics (over 12 inches in width). Estimates are included for all manufacturers whose reports were not received in time for tabulation.

The information is collected on quarterly report Form M22T, Broad Fabrics (Except Knit): Woven, Nonwoven, and Felts. A separate report is obtained from each mill although in some instances the "mill" reported as one unit to the Census Bureau constitutes two or more buildings

at the same or nearby locations. In the tabulation of these reports, the production figures represent total production of the specified fabrics by all weaving mills regardless of their primary activity.

**REVISION TO MILL ASSIGNMENT DATA**—Information on loom hours, yarn consumption, and stocks shown in tables 3, 4, and 5 relates to the entire activity of all mills primarily producing cotton fabrics. These data are not comparable with information shown for previous quarters because of the reclassification of particular mills whose primary activity is now the weaving of man-made fiber fabrics rather than cotton fabrics. An overlap between the old and new mill assignment is not available. It should be noted, however, that the combination of data shown in this series (M22T.1) and the man-made fiber broad-woven goods report (M22T.2) for yarns consumed by type of mill, loom hours, and stocks are comparable.

**KNIT GOODS**—Separate data on knit cloth are published by the Bureau of the Census in quarterly series M22K, Shipments of Knit Cloth, Including Interplant Transfers, beginning with the fourth quarter 1966. Data are available upon request.

Table 1.--SUMMARY OF PRODUCTION, BY CLASS OF FABRIC  
(Thousands of linear yards)

Type of goods	1967	
	April-June (Preliminary)	Jan.-Mar. <sup>1</sup>
COTTON BROAD-WOVEN GOODS, TOTAL.....	2,136,483	2,222,606
Duck and allied fabrics.....	71,294	75,487
Sheeting and allied coarse and medium yarn fabrics.....	658,938	668,939
Print cloth yarn fabrics.....	730,389	776,964
Colored yarn fabrics.....	96,903	103,601
Towels, toweling, and dishcloths.....	161,184	166,316
Napped fabrics, blankets and blanketing.....	40,525	40,496
Fine cotton fabrics.....	257,452	268,168
Other woven cotton fabrics and specialties.....	119,798	122,635

<sup>1</sup>Revised.

Inquiries concerning these figures should be addressed to the U.S. Department of Commerce, Bureau of the Census, Industry Division, Washington, D.C. 20233.

For sale by the Bureau of the Census, Washington, D.C. 20233  
Price 25 cents - \$1.00 per year

# Cotton Broad-Woven Goods

Dewey

## Third Quarter 1967

FOR RELEASE: January 11, 1968

SERIES: M22T.1(67)-3

**COVERAGE**—The figures included in this publication represent the entire known production of cotton broad-woven fabrics (over 12 inches in width). Estimates are included for all manufacturers whose reports were not received in time for tabulation.

The information is collected on quarterly report Form M22T, Broad Fabrics (Except Knit): Woven, Nonwoven, and Felts. A separate report is obtained from each mill although in some instances the "mill" reported as one unit to the Census Bureau constitutes two or more buildings at the same or nearby locations. In the tabulations of these reports, the production figures represent total production of the specified fabrics by all weaving mills regardless of their primary activity.

**REVISION TO MILL ASSIGNMENT DATA**—Information on loom hours, yarn consumption, and

stocks shown in tables 3, 4, and 5 relates to the entire activity of all mills primarily producing cotton fabrics. These data are not comparable with information shown for previous quarters because of the reclassification of particular mills whose primary activity is now the weaving of man-made fiber fabrics rather than cotton fabrics. An overlap between the old and new mill assignment is not available. It should be noted, however, that the combination of data shown in this series (M22T.1) and the man-made fiber broad-woven goods report (M22T.2) for yarn consumed by type of mill, loom hours, and stocks are comparable.

**KNIT GOODS**—Separate data on knit cloth are published by the Bureau of the Census in quarterly series M22K. Shipments of Knit Cloth, including Interplant Transfers, beginning with the fourth quarter 1966. Data are available upon request.

## Change Sheet

## Cotton Broad-Woven Goods

First Quarter 1966 To Third Quarter 1967

FOR RELEASE: January 26, 1968

SERIES: M22T.1

A review of the information published in this series has revealed some reporting errors of toweling and combed bed sheeting fabrics for selected fabric descriptions. The following changes should be made in this publication of M22T.1, Cotton Broad-Woven Goods, for the first quarter 1966 through the third quarter 1967. In addition, you should note in your review of these data that the significant revisions are indicated with an asterisk.

# Cotton Broad-Woven Goods

## Fourth Quarter 1967

FOR RELEASE: April 15, 1968

SERIES: M22T.1(67)-4

**COVERAGE**—The figures included in this publication represent the entire known production of cotton broad-woven fabrics (over 12 inches in width). Estimates are included for all manufacturers whose reports were not received in time for tabulation.

The information is collected on quarterly report Form M22T, Broad Fabrics (Except Knit): Woven, Nonwoven, and Felts. A separate report is obtained from each mill although in some instances the "mill" reported as one unit to the Census Bureau constitutes two or more buildings at the same or nearby locations. In the tabulations of these reports, the production figures represent total production of the specified fabrics by all weaving mills regardless of their primary activity.

**REVISION TO MILL ASSIGNMENT DATA**—Information on loom hours, yarn consumption, and

stocks shown in tables 3, 4, and 5 relates to the entire activity of all mills primarily producing cotton fabrics. These data are not comparable with information shown for previous quarters because of the reclassification of particular mills whose primary activity is now the weaving of man-made fiber fabrics rather than cotton fabrics. An overlap between the old and new mill assignment is not available. It should be noted, however, that the combination of data shown in this series (M22T.1) and the man-made fiber broad-woven goods report (M22T.2) for yarn consumed by type of mill, loom hours, and stocks are comparable.

**KNIT GOODS**—Separate data on knit cloth are published by the Bureau of the Census in quarterly series M22K, Shipments of Knit Cloth, Including Interplant Transfers, beginning with the fourth quarter 1966. Data are available upon request.

# Cotton Broadwoven Goods

## Summary for 1967

FOR RELEASE: December 10, 1968

SERIES: MQ-22T.1(67)-5

The data shown in this report summarizes the information published in the quarterly M22T.1 series. Any revisions made to quarterly data previously published in this series are so noted.

### DESCRIPTION OF SURVEY

The statistics in this publication were published in Census quarterly series M22T.1 Cotton Broadwoven Goods, from a sample of mills accounting for approximately 98 percent of the total U.S. production of cotton broadwoven goods. Estimates have been included for manufacturers whose reports were not received and are based on their production as reported in the 1966 annual survey.

The data in this report are not adjusted for seasonal variation or number of working days.

### COVERAGE

The information contained in this report is collected on Census quarterly form M22T, "Broad Fabrics (Except Knit): Woven, Nonwoven, and Felts." A separate report is requested from each mill, although in some instances the "mill" reported as one unit to the Census Bureau constitutes more than one location.

Fabrics woven on commission are reported in this series by the commission mill, not by the company for which the work is contracted.

### COVERAGE OF INDIVIDUAL TABLES

The production figures shown in tables 1 and 2 represent total production of the specified

fabrics by all weaving mills regardless of their primary activity. However, because a single report is collected from an individual mill, the information shown in tables 3, 4, 5, and 6 relates to the entire activity of all mills primarily producing cotton fabrics. Insofar as these mills produced other fabrics (manmade fiber or wool) as a secondary project, the yarn consumption or loom activity for such fabrics would be included in this report. Similarly, the yarns consumed in the manufacture of cotton fabrics produced as a secondary product in a mill primarily producing manmade fiber fabrics is excluded from this report and included in the Current Industrial Reports publication relating to manmade fiber broadwoven fabrics.

### REVISION TO MILL ASSIGNMENT DATA

Information on loom hours, yarn consumption, and stocks shown in tables 3, 4, and 5 are not comparable with information shown for previous years because of the 1967 reclassification of particular mills whose primary activity is now the weaving of manmade fiber fabrics rather than cotton fabrics. An overlap between the old and new mill assignment is not available. It should be noted, however, that the combination of data shown in this series (M22T.1) and the manmade fiber broadwoven goods report (M22T.2) for yarns consumed by type of mill, loom hours, and stocks are comparable.

### WOOLEN AND WORSTED MILLS

Mills with woolen and worsted machinery which primarily produce manmade fiber fabrics do not report yarn consumption data. Separate data on knit cloth are published by the Bureau of the Census in quarterly series M22K, Ship-

Inquiries concerning these figures should be addressed to the U.S. Department of Commerce, Bureau of the Census, Industry Division, Washington, D.C. 20233.

BUREAU OF THE CENSUS A. Ross Eckler, Director

ments of Knit Cloth, including Interplant Transfers, beginning with the fourth quarter 1966. Data are available upon request.

## DEFINITION OF TERMS

Broad Fabrics--Fabric over 12" in width, as made.

Cotton Fabrics--Includes fabric wholly or chiefly by weight of cotton.

Blends, Chiefly Cotton--Includes fabrics chiefly by weight of cotton and containing other fibers, such as nylon, polyester, etc.

Blends and Mixtures--Fabrics which are made from more than one fiber are classified according to whether the fabric is chiefly cotton, wool, or manmade fiber. As examples, a fabric made of 55 percent cotton and 45 percent rayon is included in the cotton report; a fabric which is 40 percent cotton, 30 percent rayon, and 30 percent acetate is

classified in the manmade fibers report. Blends and mixtures which are by weight 50 percent of one fiber and 50 percent of another fiber are classified according to the fiber of greatest value. As an example, a fabric which is 50 percent polyester and 50 percent cotton is classified as polyester. Fabrics which are 95 percent or more of one fiber are included in the 100 percent classification for that fiber.

## ACKNOWLEDGMENTS

This report was prepared in the Industry Division, Bureau of the Census, under the direction of Robert J. Nealon, Chief, Foods, Textiles, and Apparel. Evelyn O. Denny, Chief, Textiles, assisted by Donald E. Burgess, was directly responsible for the review of the data and preparation of the report. Owen C. Gretton, Chief of the Division, and Milton Eisen, Assistant Chief, provided overall direction and coordination to this project.

Table 1. SUMMARY OF PRODUCTION, BY CLASS OF FABRIC: 1958 TO 1967

(Millions of linear yards)

Year	Cotton broadwoven goods <sup>1</sup> total	Duck and allied fabrics	Sheeting and allied coarse and medium yarn fabrics	Print cloth yarn fabrics	Carded colored yarn fabrics	Towels, toweling, and dishcloths	Mapped fabrics, blankets, and blanketing	Fine cotton fabrics	Other woven cotton fabrics and specialties
1967.....	8,278.1	277.9	2,545.1	2,871.7	380.6	623.8	152.3	944.5	482.2

# Cotton Broadwoven Goods

## First Quarter 1968

FOR RELEASE: July 25, 1968

SERIES: MQ-22T.1(68)-1

The statistics in this publication are based on a survey of manufacturers and represent the entire U.S. production of cotton broadwoven fabrics over 12 inches in width. Estimates are included for companies whose reports were not received in time for tabulation. A more complete description of the survey appears on pages 8 and 9.

Table 1. Summary of Production, by Class of Fabric: 1962 to 1968

(Millions of linear yards)

Quarter and year	Cotton broadwoven goods, total	Duck and allied fabrics	Sheeting and allied coarse and medium yarn fabrics	Print cloth yarn fabrics	Colored yarn fabrics	Towels, toweling, and dishcloths	Knapped fabrics, blankets, and blanketing	Fine cotton fabrics	Other woven cotton fabrics and specialties

## DESCRIPTION OF SURVEY

The statistics in this publication were collected on Census quarterly Form MQ-22T, Broad Fabrics (Except Knit): Woven, Nonwoven, and Felts. A separate report is obtained from each mill although in some instances the "mill" reported as one unit to the Bureau of the Census constitutes two or more buildings at the same or nearby locations.

The current quarter's figures include estimates for manufacturers whose reports were not received in time for tabulation. Such estimates are based on quarter-to-quarter trends shown by reporting firms and are generally limited to a maximum of 5 percent for any one item. Statistics for previous quarters may be revised, due to receipt of corrected data from respondents, including late reports for which estimates were made, and other corrections. Figures which were revised significantly are indicated by footnotes.

The data in this report are not adjusted for seasonal variation or number of working days.

## RELATED REPORTS

The following is a list of selected current and recent special textile reports published by the Census Bureau in the Current Industrial Reports series:

Series No.	Title	Frequency
M22A	Woven Fabrics--Production, Inventories, and Unfilled Orders	Monthly
M22D	Consumption on the Woolen and Worsted Systems	Monthly
M22P	Cotton, Manmade Fiber Staple, and Linters--Consumption, Stocks, and Spindle Activity	Monthly
MQ-22K	Shipments of Knit Cloth, Including Interplant Transfers	Quarterly
MA-22F	Yarn Production	Annual
MA-22G	Narrow Fabrics	Annual
MA-22S	Broadwoven Fabrics Finished	Annual

MA-22T.5	Nonwoven Fabrics	Annual
MA-23X	Sheets, Pillowcases, and Towels	Annual

## SPECIAL TEXTILE REPORTS

At intervals of a few years, special supplemental reports on broadwoven fabrics are also published. Present reports of this type are:

Series	Title	Period Covered
M22T Supp.	Broadwoven Fabrics--Blends and Mixtures	1965
M22T.1 Supp.	Broadwoven Fabrics, Average Weight and Width of Fabric (Cotton, Manmade Fiber, and Wool Fabrics)	First Quarter 1963
M22T-1 Supp.	Broad Fabric Weaving Looms in Place by Type and Width	1964

## EXPLANATION OF TERMS

Cotton Fabrics--Wholly or chiefly by weight of cotton.

### Blends and Mixtures

Fabrics made from more than one fiber are classified in the same way as other fabrics, i.e., according to whether the fabric is chiefly cotton, wool, or manmade fiber. As examples, a fabric which is 55 percent cotton and 45 percent rayon is classified in the cotton section; a fabric which is 40 percent cotton, 30 percent rayon, and 30 percent acetate is classified in the manmade fibers section.

Blends and mixtures which are by weight 50 percent of one fiber and 50 percent of another fiber are classified according to the fiber of greatest value. As an example, a fabric which is 50 percent polyester and 50 percent cotton is classified as polyester.

Fabrics which are 95 percent or more of one fiber are not considered blends. Such fabrics are included in the 100 percent classification for that fiber.

### Units of Quantity

Production is reported in thousands of linear yards except as follows:

Blanketing--In thousands of linear yards, 72 inch width or equivalent.

Selected items in thousands of pounds as noted.

Production--Represents total production of cotton fabrics by all known weaving mills regardless of their primary activity.

Looms Operating--Represents number of looms operating on the specific fabrics at end of quarter.

Yarns Consumed Loom Hours, and Stocks of Selected Filament Yarns--Represents data for all

mills primarily producing cotton broadwoven fabrics.

MILL CLASSIFICATION - Mills are classified according to the major type of fabric produced. However, this classification is not made on a quarterly basis. For 1967, particular mills whose primary activity had become the weaving of manmade fiber fabrics rather than cotton were given revised mill classifications. Consequently, data on loom hours, yarn consumption, and stocks shown in tables 3, 4, and 5 are not comparable with information shown for 1966 and prior years. An overlap between the old and new mill assignment is not available. It should be noted, however, that the combination of data shown in this series (M22T.1) and the manmade fiber broadwoven goods series (M22T.2) for yarns consumed, loom hours, and stocks are comparable.

# Cotton Broadwoven Fabrics Average Weight and Width of Fabrics 1947 - First Quarter 1968

FOR RELEASE: November 29, 1968

SERIES: MQ-22T.1(68)-1 Supplement

## SUMMARY OF FINDINGS

During the period from 1947 to the first quarter of 1968, the average width of cotton broadwoven fabrics increased 18 percent. In 1947 the average linear yard of cotton fabrics included 1.10 square yards of material. This ratio increased to 1.17 during the first quarter of 1958, to 1.22 during the first quarter of 1963, and to 1.30 during the first quarter of 1968.

The largest proportionate changes were reported for fine cotton fabrics and for toweling, washcloth, and dishcloth fabrics. In 1947 the average linear yard of fine cotton fabrics included 1.12 square yards of fabric; and by 1968 it had increased to 1.58 square yards per linear yard. For toweling, washcloth, and dishcloth fabrics, the ratio increased from .62 square yards per linear yard in 1947 to .88 square yards per linear yard in 1968.

With the increase in fabric widths, there was, as would be expected, an increase in the weight per linear yard. This is shown by the decline in the number of linear yards per pound of fabric produced. In 1947 a pound of fabric was equivalent of 3.30 linear yards. This declined to 3.16 in 1954; 3.09 in the first quarter 1958; 2.84 in the first quarter of 1963; and 2.61 in the first quarter of 1968.

With the changes in fabric widths and weights there have also been changes in the relative importance of individual constructions. One result of this has been that, on an overall basis, current cotton fabric production is heavier than in any of the previous periods surveyed. In 1947, 3.64 square yards of fabric weighed 1 pound. This was reduced to 3.61 square yards per pound in 1958; 3.48 in 1963; and 3.39 in 1968. However, the trend to heavier weights was not uniform for all fabrics, and the opposite movement occurred for some categories.

## SURVEY AUTHORIZATION

The survey of fabric production in linear yards, square yards, and pounds for the first quarter of 1968 was conducted as part of the 1967 Census of Manufactures as authorized by an Act of Congress (13 United States Code). Data for earlier years were also collected as part of the censuses of manufactures for those years.

## COVERAGE OF THE 1968 SURVEY

All respondents reporting in the Census quarterly broadwoven fabrics survey (Form MQ-22T) were included in the study of fabric weights and widths. Reports were received from manufacturers accounting for approximately 92 percent

Inquiries concerning these figures should be addressed to the U.S. Department of Commerce, Bureau of the Census, Industry Division, Washington, D.C. 20233.

U.S. DEPARTMENT OF COMMERCE C. R. Smith, Secretary  
William H. Chartener, Assistant Secretary for Economic Affairs  
BUREAU OF THE CENSUS A. Ross Eckler, Director

of the first quarter 1968 production of cotton fabrics. Based on these reports, ratios of production of square yards and pounds to linear yards were computed for each of the fabrics shown in table 2. These ratios were then applied to the actual production data, in linear yards, to obtain estimates of the square yards and pounds of fabric produced. For all fabrics, the coverage ratios shown in table 2 indicate the percentage of the total production reported by respondents in this study for 1968. Individual figures for square yards and pounds are withheld when they are based on reports accounting for less than 50 percent of the total production.

The linear yards figures shown are from the Current Industrial Reports Series MQ-22T.1 (68)-2, Cotton Broadwoven Goods, Second Quarter 1968.

#### SEASONAL INFLUENCES

No analysis has been made of the effect on the 1968 data of seasonal influences which may have increased or decreased the production of specific fabrics during this period.

#### MANMADE FIBER AND WOOL FABRICS

Information regarding the relationship of linear yards to square yards and pounds of fabric production was also collected for manmade fiber and woolen and worsted fabrics. The report for woolen and worsted fabrics has been issued in Current Industrial Reports Series MQ-22T.3 (68)-1 Supplement, while the report for manmade fiber fabrics will be issued in Current Industrial Reports Series MQ-22T.2(68)-1 Supplement.

#### ACKNOWLEDGMENTS

This report was prepared in the Industry Division, Bureau of the Census, under the direction of Robert J. Nealon, Chief, Foods, Textiles, and Apparel Branch. Evelyn O. Denny, Chief, Textiles, assisted by Robert L. Gignilliat, was directly responsible for the review of the data and preparation of the report. Owen C. Gretton, Chief of the Division, and Milton Eisen, Assistant Chief, provided overall direction and coordination to this project.

- Represents zero. (D) Withheld to avoid disclosing figures for individual companies. This detail figure is, however, included in the appropriate subtotals and totals. n.e.c. Not elsewhere classified. Revised.

<sup>1</sup>Represents percentage of total linear yards accounted for by reports received in this survey.

<sup>2</sup>Data withheld because production information in square yards and pounds was reported by companies accounting for less than 50 percent of the total production.

FOR RELEASE: September 25, 1968

SERIES: MQ-22T.1(68) -2

The statistics in this publication are based on a survey of manufacturers and represent the entire U.S. production of cotton broadwoven fabrics over 12 inches in width. Estimates are included for companies whose reports were not received in time for tabulation. A more complete description of the survey appears on pages 8 and 9.

Table 1. Summary of Production, by Class of Fabric: 1962 to 1968

(Millions of linear yards)

Quarter and year	Cotton broadwoven goods, total	Duck and allied fabrics	Sheeting and allied coarse and medium yarn fabrics	Print cloth yarn fabrics	Carded colored yarn fabrics	Towels, toweling, and dishcloths	Napped fabrics, blankets, and blanketing	Fine cotton fabrics	Other woven cotton fabrics and specialties

## DESCRIPTION OF SURVEY

The statistics in this publication and in the other MQ-22T reports were collected on Census Form MQ-22T, Broad Fabrics (Except Knit): Woven, Nonwoven, and Felts from a panel of approximately 650 producers who account for about 95 percent of the total production. Estimates are included in the published figures for an additional 150 small producers reporting annually.

The current quarter's figures may also include estimates for respondents whose reports were not received in time for tabulation. Such missing figures are imputed from the quarter-to-quarter movements shown by reporting firms and are generally limited to a maximum of 10 percent to any one item. Individual items with higher imputation rates are footnoted.

The imputation rate is not an explicit indicator of the potential error in published figures due to nonresponse, because the actual quarterly movements for nonrespondents may or may not closely agree with the imputed movements. The probable range of difference between the actual and imputed figures is unknown. The degree of uncertainty regarding the accuracy of the data, however, increases as the percentage of imputation increases. Figures with high imputation rates, therefore, should be used with caution.

Statistics for previous quarters may be revised, due to receipt of corrected data from respondents, including late reports for which estimates were made, and other corrections. Figures which were revised significantly are indicated by footnotes.

The data in this report are not adjusted for seasonal variation or number of working days.

## RELATED REPORTS

The following is a list of selected current and recent special textile reports published by the Census Bureau in the Current Industrial Reports series:

Series No.	Title	Frequency
M22A	Woven Fabrics--Production, Inventories, and Unfilled Orders	Monthly
M22D	Consumption on the Woolen and Worsted Systems	Monthly
M22P	Cotton, Manmade Fiber Staple, and Linters--Consumption, Stocks, and Spindle Activity	Monthly

MQ-22K	Shipments of Knit Cloth, Including Interplant Transfers	Quarterly
MA-22F	Yarn Production	Annual
MA-22G	Narrow Fabrics	Annual
MA-22S	Broadwoven Fabrics Finished	Annual
MA-22T.5	Nonwoven Fabrics	Annual
MA-23X	Sheets, Pillowcases, and Towels	Annual

## SPECIAL TEXTILE REPORTS

At intervals of a few years, special supplemental reports on broadwoven fabrics are also published. Recent reports of this type are:

Series	Title	Period Covered
M22T Supp.	Broadwoven Fabrics--Blends and Mixtures	1965
M22T.1 Supp.	Broadwoven Fabrics, Average Weight and Width of Fabric (Cotton, Manmade Fiber, and Wool Fabrics)	First Quarter 1963
M22T-1 Supp.	Broad Fabric Weaving Looms in Place by Type and Width	1964

## EXPLANATION OF TERMS

Cotton Fabrics--Wholly or chiefly by weight of cotton.

### Blends and Mixtures

Fabrics made from more than one fiber are classified in the same way as other fabrics, i.e., according to whether the fabric is chiefly cotton, wool, or manmade fiber. As examples, a fabric which is 55 percent cotton and 45 percent rayon is classified in the cotton section; a fabric which is 40 percent cotton, 30 percent rayon, and 30 percent acetate is classified in the manmade fibers section.

Blends and mixtures which are by weight 50 percent of one fiber and 50 percent of another fiber are classified according to the fiber of Current Industrial Reports Series MQ-22T.1(68)-2

greatest value. As an example, a fabric which is 50 percent polyester and 50 percent cotton is classified as polyester.

Fabrics which are 95 percent or more of one fiber are not considered blends. Such fabrics are included in the 100 percent classification for that fiber.

#### Units of Quantity

Production is reported in thousands of linear yards except as follows:

Blanketing--In thousands of linear yards, 72 inch width or equivalent.

Selected items in thousands of pounds as noted.

Production--Represents total production of cotton fabrics by all known weaving mills regardless of their primary activity.

Looms Operating--Represents number of looms operating on the specific fabrics at end of quarter.

Yarns Consumed Loom Hours, and Stocks of Selected Filament Yarns--Represents data for all mills primarily producing cotton broadwoven fabrics.

MILL CLASSIFICATION - Mills are classified according to the major type of fabric produced. However, this classification is not made on a quarterly basis. For 1967, particular mills whose primary activity had become the weaving of man-made fiber fabrics rather than cotton were given revised mill classifications. Consequently, data on loom hours, yarn consumption, and stocks shown in tables 3, 4, and 5 are not comparable with information shown for 1966 and prior years. An overlap between the old and new mill assignment is not available. It should be noted, however, that the combination of data shown in this series (M22T.1) and the manmade fiber broadwoven goods series (M22T.2) for yarns consumed, loom hours, and stocks are comparable.

# Current Data on U.S. Defense Activity

*and its impact on the national economy*

The principal time series on defense activity which influence short-term changes in the national economy are now available in a new monthly report from the Bureau of the Census.

**Defense Indicators** includes data on the following measures of defense activity:

- Obligations    ■ Orders    ■ Shipments    ■ Employment
- Contracts    ■ Expenditures    ■ Inventories    ■ Earnings

Recommended by an interagency committee established by the Bureau of the Budget, the new report presents data compiled by the Department of Defense, the Bureau of Labor Statistics, the Bureau of the Census, the Treasury Department, and the Office of Business Economics. With the exception of a few quarterly series, the measures are updated monthly.

The approximately 30 time series included are grouped in accordance with the time at which the activities they measure occur in the defense order-production-delivery process. The measures are presented graphically in three charts to facilitate interpretation:

- Comparison of National Defense Purchases with Total Gross National Product
- Advance Indicators of Defense Activity
- Intermediate and Final Indicators of Defense Activity

Analytical tables provide the original and seasonally adjusted basic data in monthly, quarterly, and annual form. Descriptions and definitions of the time series are also included.

**Defense Indicators** is available from the Superintendent of Documents, Government Printing Office, Washington, D.C., or any Department of Commerce field office, at \$4.50 per year.

## ORDER SUBSCRIPTIONS FROM

# CURRENT INDUSTRIAL REPORTS

## Cotton Broadwoven Goods

Third Quarter 1968

FOR RELEASE: January 30, 1969

SERIES: MQ-22T.1(68)-3

The statistics in this publication are based on a survey of manufacturers and represent the entire U.S. production of cotton broadwoven fabrics over 12 inches in width. Estimates are included for companies whose reports were not received in time for tabulation. A more complete description of the survey appears on pages 8 and 9.

Table 1. Summary of Production, by Class of Fabric: 1962 to 1968

(Millions of linear yards)

Quarter and year	Cotton broadwoven goods, total	Duck and allied fabrics	Sheeting and allied coarse and medium yarn fabrics	Print cloth yarn fabrics	Garded colored yarn fabrics	Towels, toweling, and dishcloths	Napped fabrics, blankets, and blanketing	Fine cotton fabrics	Other woven cotton fabrics and specialties

<sup>1</sup>Revised by 5 percent or more from previously published data.<sup>1</sup>Imputation rate exceeds 10 percent.

## DESCRIPTION OF SURVEY

The statistics in this publication and in the other MQ-22T reports were collected on Census Form MQ-22T, Broad Fabrics (Except Knit): Woven, Nonwoven, and Felts from a panel of approximately 650 producers who account for about 95 percent of the total production. Estimates are included in the published figures for an additional 150 small producers reporting annually.

The current quarter's figures may also include estimates for respondents whose reports were not received in time for tabulation. Such missing figures are imputed from the quarter-to-quarter movements shown by reporting firms and are generally limited to a maximum of 10 percent to any one item. Individual items with higher imputation rates are footnoted.

The imputation rate is not an explicit indicator of the potential error in published figures due to nonresponse, because the actual quarterly movements for nonrespondents may or may not closely agree with the imputed movements. The probable range of difference between the actual and imputed figures is unknown. The degree of uncertainty regarding the accuracy of the data, however, increases as the percentage of imputation increases. Figures with high imputation rates, therefore, should be used with caution.

Statistics for previous quarters may be revised, due to receipt of corrected data from respondents, including late reports for which estimates were made, and other corrections. Figures which were revised significantly are indicated by footnotes.

The data in this report are not adjusted for seasonal variation or number of working days.

## RELATED REPORTS

The following is a list of selected current and recent special textile reports published by the Census Bureau in the Current Industrial Reports series:

Series No.	Title	Frequency
M22A	Woven Fabrics--Production, Inventories, and Unfilled Orders	Monthly
M22D	Consumption on the Woolen and Worsted Systems	Monthly
M22P	Cotton, Manmade Fiber Staple, and Linters--Consumption, Stocks, and Spindle Activity	Monthly

MQ-22K	Shipments of Knit Cloth, Including Interplant Transfers	Quarterly
MA-22F	Yarn Production	Annual
MA-22G	Narrow Fabrics	Annual
MA-22S	Broadwoven Fabrics Finished	Annual
MA-22T.5	Nonwoven Fabrics	Annual
MA-23X	Sheets, Pillowcases, and Towels	Annual

## SPECIAL TEXTILE REPORTS

At intervals of a few years, special supplemental reports on broadwoven fabrics are also published. Recent reports of this type are:

Series	Title	Period Covered
M22T Supp.	Broadwoven Fabrics--Blends and Mixtures	1965
M22T.1 Supp.	Broadwoven Fabrics, Average Weight and Width of Fabric (Cotton, Manmade Fiber, and Wool Fabrics)	First Quarter 1963
M22T-1 Supp.	Broad Fabric Weaving Looms in Place by Type and Width	1964

## EXPLANATION OF TERMS

Cotton Fabrics--Wholly or chiefly by weight of cotton.

### Blends and Mixtures

Fabrics made from more than one fiber are classified in the same way as other fabrics, i.e., according to whether the fabric is chiefly cotton, wool, or manmade fiber. As examples, a fabric which is 55 percent cotton and 45 percent rayon is classified in the cotton section; a fabric which is 40 percent cotton, 30 percent rayon, and 30 percent acetate is classified in the manmade fibers section.

Blends and mixtures which are by weight 50 percent of one fiber and 50 percent of another fiber are classified according to the fiber of Current Industrial Reports Series MQ-22T.1(68)-3

greatest value. As an example, a fabric which is 50 percent polyester and 50 percent cotton is classified as polyester.

Fabrics which are 95 percent or more of one fiber are not considered blends. Such fabrics are included in the 100 percent classification for that fiber.

#### Units of Quantity

Production is reported in thousands of linear yards except as follows:

Blanketing--In thousands of linear yards, 72 inch width or equivalent.

Selected items in thousands of pounds as noted.

Production--Represents total production of cotton fabrics by all known weaving mills regardless of their primary activity.

Looms Operating--Represents number of looms operating on the specific fabrics at end of quarter.

Yarns Consumed Loom Hours, and Stocks of Selected Filament Yarns--Represents data for all mills primarily producing cotton broadwoven fabrics.

MILL CLASSIFICATION - Mills are classified according to the major type of fabric produced. However, this classification is not made on a quarterly basis. For 1967, particular mills whose primary activity had become the weaving of man-made fiber fabrics rather than cotton were given revised mill classifications. Consequently, data on loom hours, yarn consumption, and stocks shown in tables 3, 4, and 5 are not comparable with information shown for 1966 and prior years. An overlap between the old and new mill assignment is not available. It should be noted, however, that the combination of data shown in this series (M22T.1) and the manmade fiber broadwoven goods series (M22T.2) for yarns consumed, loom hours, and stocks are comparable.

*Here's a fast and easy way you can*

- evaluate your current investments
- find new investment prospects
- relate your product to competitive areas
- measure industry performance

# Growth Pace Setters in American Industry

This analysis by expert economists in the Business & Defense Services Administration of a selection of 55 fast growing industries gives you last minute statistics on: value of shipments, capital expenditures, foreign trade, geographic distribution, principal industry products, investment, wages per production worker, number of employees per establishment.

For only \$1.50 you get 186 pages packed with reliable analyses, tables, and charts. Pace Setters is your time-saving guide to growth factors and future prospects of U.S. industry. Send for your copies now. Return this special reservation.

## Cotton Broadwoven Goods

Fourth Quarter 1968

FOR RELEASE: April 28, 1969

SERIES: MQ-22T.1(68)-4

The statistics in this publication are based on a survey of manufacturers and represent the entire U.S. production of cotton broadwoven fabrics over 12 inches in width. Estimates are included for companies whose reports were not received in time for tabulation. A more complete description of the survey appears on pages 8 and 9.

Table 1. Summary of Production, by Class of Fabric: 1962 to 1968

(Millions of linear yards)

Quarter and year	Cotton broadwoven goods, total	Duck and allied fabrics	Sheeting and allied coarse and medium yarn fabrics	Print cloth yarn fabrics	Carded colored yarn fabrics	Towels, toweling, and dishcloths	Mapped fabrics, blankets, and blanketing	Fine cotton fabrics	Other woven cotton fabrics and specialties

<sup>1</sup>Revised by 5 percent or more from previously published data.<sup>2</sup>Imputation rate exceeds 10 percent.

## DESCRIPTION OF SURVEY

The statistics in this publication and in the other MQ-22T reports were collected on Census Form MQ-22T, Broad Fabrics (Except Knit): Woven, Nonwoven, and Felts from a panel of approximately 650 producers who account for about 95 percent of the total production. Estimates are included in the published figures for an additional 150 small producers reporting annually.

The current quarter's figures may also include estimates for respondents whose reports were not received in time for tabulation. Such missing figures are imputed from the quarter-to-quarter movements shown by reporting firms and are generally limited to a maximum of 10 percent to any one item. Individual items with higher imputation rates are footnoted.

The imputation rate is not an explicit indicator of the potential error in published figures due to nonresponse, because the actual quarterly movements for nonrespondents may or may not closely agree with the imputed movements. The probable range of difference between the actual and imputed figures is unknown. The degree of uncertainty regarding the accuracy of the data, however, increases as the percentage of imputation increases. Figures with high imputation rates, therefore, should be used with caution.

Statistics for previous quarters may be revised, due to receipt of corrected data from respondents, including late reports for which estimates were made, and other corrections. Figures which were revised significantly are indicated by footnotes.

The data in this report are not adjusted for seasonal variation or number of working days.

## RELATED REPORTS

The following is a list of selected current and recent special textile reports published by the Census Bureau in the Current Industrial Reports series:

<u>Series No.</u>	<u>Title</u>	<u>Frequency</u>
M22A	Woven Fabrics--Production, Inventories, and Unfilled Orders	Monthly
M22D	Consumption on the Woolen and Worsted Systems	Monthly
M22P	Cotton, Manmade Fiber Staple, and Linters--Consumption, Stocks, and Spindle Activity	Monthly

MQ-22K	Shipments of Knit Cloth, Including Interplant Transfers	Quarterly
MA-22F	Yarn Production	Annual
MA-22G	Narrow Fabrics	Annual
MA-22S	Broadwoven Fabrics Finished	Annual
MA-22T,5	Nonwoven Fabrics	Annual
MA-23X	Sheets, Pillowcases, and Towels	Annual

## SPECIAL TEXTILE REPORTS

At intervals of a few years, special supplemental reports on broadwoven fabrics are also published. Recent reports of this type are:

<u>Series</u>	<u>Title</u>	<u>Period Covered</u>
M22T Supp.	Broadwoven Fabrics--Blends and Mixtures	1965
M22T.1 Supp.	Broadwoven Fabrics, Average Weight and Width of Fabric (Cotton, Manmade Fiber, and Wool Fabrics)	First Quarter 1963
M22T-1 Supp.	Broad Fabric Weaving Looms in Place by Type and Width	1964

## EXPLANATION OF TERMS

Cotton Fabrics--Wholly or chiefly by weight of cotton.

### Blends and Mixtures

Fabrics made from more than one fiber are classified in the same way as other fabrics, i.e., according to whether the fabric is chiefly cotton, wool, or manmade fiber. As examples, a fabric which is 55 percent cotton and 45 percent rayon is classified in the cotton section; a fabric which is 40 percent cotton, 30 percent rayon, and 30 percent acetate is classified in the manmade fibers section.

Blends and mixtures which are by weight 50 percent of one fiber and 50 percent of another fiber are classified according to the fiber of Current Industrial Reports Series MQ-22T.1(68)-4

greatest value. As an example, a fabric which is 50 percent polyester and 50 percent cotton is classified as polyester.

Fabrics which are 95 percent or more of one fiber are not considered blends. Such fabrics are included in the 100 percent classification for that fiber.

#### Units of Quantity

Production is reported in thousands of linear yards except as follows:

Blanketing--In thousands of linear yards, 72 inch width or equivalent.

Selected items in thousands of pounds as noted.

Production--Represents total production of cotton fabrics by all known weaving mills regardless of their primary activity.

Looms Operating--Represents number of looms operating on the specific fabrics at end of quarter.

Yarns Consumed Loom Hours, and Stocks of Selected Filament Yarns--Represents data for all mills primarily producing cotton broadwoven fabrics.

MILL CLASSIFICATION - Mills are classified according to the major type of fabric produced. However, this classification is not made on a quarterly basis. For 1967, particular mills whose primary activity had become the weaving of man-made fiber fabrics rather than cotton were given revised mill classifications. Consequently, data on loom hours, yarn consumption, and stocks shown in tables 3, 4, and 5 are not comparable with information shown for 1966 and prior years. An overlap between the old and new mill assignment is not available. It should be noted, however, that the combination of data shown in this series (M22T.1) and the manmade fiber broadwoven goods series (M22T.2) for yarns consumed, loom hours, and stocks are comparable.

# Cotton Broadwoven Goods Summary for 1968

OR RELEASE: December 24, 1969

SERIES: MQ-22T.1(68)-5

The data shown in this report summarizes the information published in the quarterly MQ-22T.1 series. Any revisions made to quarterly data previously published in this series are so noted.

## DESCRIPTION OF SURVEY

The statistics in this publication were published in Census quarterly series MQ-22T.1 Cotton Broadwoven Goods, from a sample of mills accounting for approximately 98 percent of the total U.S. production of cotton broadwoven goods. Estimates have been included for manufacturers whose reports were not received and are based on their production as reported in the 1967 annual survey.

The data in this report are not adjusted for seasonal variation or number of working days.

## COVERAGE

The information contained in this report is collected on Census quarterly form MQ-22T, "Broad Fabrics (Except Knit): Woven, Nonwoven, and Felts." A separate report is requested from each mill, although in some instances the "mill" reported as one unit to the Census Bureau constitutes more than one location.

Fabrics woven on commission are reported in this series by the commission mill, not by the company for which the work is contracted.

## COVERAGE OF INDIVIDUAL TABLES

The production figures shown in tables 1 and 2 represent total production of the specified

fabrics by all weaving mills regardless of their primary activity. However, because a single report is collected from an individual mill, the information shown in tables 3, 4, 5, and 6 relates to the entire activity of all mills primarily producing cotton fabrics. Insofar as these mills produced other fabrics (manmade fiber or wool) as a secondary project, the yarn consumption or loom activity for such fabrics would be included in this report. Similarly, the yarns consumed in the manufacture of cotton fabrics produced as a secondary product in a mill primarily producing manmade fiber fabrics is excluded from this report and included in the Current Industrial Reports publication relating to manmade fiber broadwoven fabrics.

## REVISION TO MILL ASSIGNMENT DATA

Information on loom hours, yarn consumption, and stocks shown in tables 3, 4, and 5 are not comparable with information prior to 1967 because of the 1967 reclassification of particular mills whose primary activity is now the weaving of manmade fiber fabrics rather than cotton fabrics. An overlap between the old and new mill assignment is not available. It should be noted, however, that the combination of data shown in this series (MQ-22T.1) and the manmade fiber broadwoven goods report (MQ-22T.2) for yarns consumed by type of mill, loom hours, and stocks are comparable.

## WOOLEN AND WORSTED MILLS

Mills with woolen and worsted machinery which primarily produce manmade fiber fabrics do not report yarn consumption data. Separate data on knit cloth are published by the Bureau of the Census in quarterly series MQ-22K, Ship-

Inquiries concerning these figures should be addressed to the U.S. Department of Commerce, Bureau of the Census, Industry Division, Washington, D.C. 20233. This publication is for sale by the Bureau of the Census, Price: 25 cents per copy—\$1.00 per year.

ments of Knit Cloth, Including Interplant Transfers, beginning with the fourth quarter 1966. Data are available upon request.

## DEFINITIONS OF TERMS

Broad Fabrics--Fabric over 12" in width, as made.

Cotton Fabrics--Includes fabric wholly or chiefly by weight of cotton.

Blends, Chiefly Cotton--Includes fabrics chiefly by weight of cotton and containing other fibers, such as nylon, polyester, etc.

Blends and Mixtures--Fabrics which are made from more than one fiber are classified according to whether the fabric is chiefly cotton, wool, or manmade fiber. As examples, a fabric made of 55 percent cotton and 45 percent rayon is included in the cotton report; a fabric which is 40 percent cotton, 30 percent rayon, and 30 percent acetate is classified in the manmade fibers report. Blends and mixtures which are by weight 50 percent of one fiber and 50 percent of another fiber are classified according to the fiber of greatest value. As an example, a fabric which is 50 percent polyester and 50 percent cotton is classified as polyester. Fabrics which are 95 percent or more of one fiber are included in the 100 percent classification for that fiber.

## SPECIAL TEXTILE REPORTS

At intervals of a few years, special supplemental reports on broadwoven fabrics are also published. Recent reports of this type are:

Series	Title	Period Covered
MQ-22T Supp.	Broadwoven Fabrics--Blends and Mixtures	1965
MQ-22T.1	Broadwoven Fabrics, Average Weight and Width of Fabric (Cotton, Manmade Fiber, and Wool Fabrics)	First Quarter 1968
MQ-22T.1 Supp.	Broad Fabric Weaving Looms in Place by Type and Width	1964

## ACKNOWLEDGMENTS

This report was prepared in the Industry Division, Bureau of the Census, under the direction of Robert J. Nealon, Chief, Foods, Textiles, and Apparel. Evelyn O. Denny, Chief, Textiles, was directly responsible for the review of the data and preparation of the report. Owen C. Gretton, Chief of the Division, and Milton Eisen, Assistant Chief, provided overall direction and coordination to this project.

FOR RELEASE: August 4, 1969

SERIES: MQ-22T.1(69)-1

The statistics in this publication are based on a survey of manufacturers and represent the entire U.S. production of cotton broadwoven fabrics over 12 inches in width. Estimates are included for companies whose reports were not received in time for tabulation. A more complete description of the survey appears on pages 8 and 9.

Table 1. **Summary of Production, by Class of Fabric: 1963 to 1969**

(Millions of linear yards)

Quarter and year	Cotton broadwoven goods, total	Duck and allied fabrics	Sheeting and allied coarse and medium yarn fabrics	Print cloth yarn fabrics	Carded colored yarn fabrics	Towels, towelings, and dishcloths	Napped fabrics, blankets, and blanketing	Fine cotton fabrics	Other woven cotton fabrics and specialties

## DESCRIPTION OF SURVEY

The statistics in this publication and in the other MQ-22T reports were collected on Census Form MQ-22T, Broad Fabrics (Except Knit): Woven, Nonwoven, and Felts from a panel of approximately 650 producers who account for about 95 percent of the total production. Estimates are included in the published figures for an additional 150 small producers reporting annually.

The current quarter's figures may also include estimates for respondents whose reports were not received in time for tabulation. Such missing figures are imputed from the quarter-to-quarter movements shown by reporting firms and are generally limited to a maximum of 10 percent to any one item. Individual items with higher imputation rates are footnoted.

The imputation rate is not an explicit indicator of the potential error in published figures due to nonresponse, because the actual quarterly movements for nonrespondents may or may not closely agree with the imputed movements. The probable range of difference between the actual and imputed figures is unknown. The degree of uncertainty regarding the accuracy of the data, however, increases as the percentage of imputation increases. Figures with high imputation rates, therefore, should be used with caution.

Statistics for previous quarters may be revised, due to receipt of corrected data from respondents, including late reports for which estimates were made, and other corrections. Figures which were revised significantly are indicated by footnotes.

The data in this report are not adjusted for seasonal variation or number of working days.

## RELATED REPORTS

The following is a list of selected current and recent special textile reports published by the Census Bureau in the Current Industrial Reports series:

Series No.	Title	Frequency
M22A	Woven Fabrics--Production, Inventories, and Unfilled Orders	Monthly
M22D	Consumption on the Woolen and Worsted Systems	Monthly
M22P	Cotton, Manmade Fiber Staple, and Linters--Consumption, Stocks, and Spindle Activity	Monthly

MQ-22K	Shipments of Knit Cloth, Including Interplant Transfers	Quarterly
MA-22F	Yarn Production	Annual
MA-22G	Narrow Fabrics	Annual
MA-22S	Broadwoven Fabrics Finished	Annual
MA-22T.5	Nonwoven Fabrics	Annual
MA-23X	Sheets, Pillowcases, and Towels	Annual

## SPECIAL TEXTILE REPORTS

At intervals of a few years, special supplemental reports on broadwoven fabrics are also published. Recent reports of this type are:

Series	Title	Period Covered
M22T Supp.	Broadwoven Fabrics--Blends and Mixtures	1965
M22T.1 Supp.	Broadwoven Fabrics, Average Weight and Width of Fabric (Cotton, Manmade Fiber, and Wool Fabrics)	First Quarter 1963
M22T-1 Supp.	Broad Fabric Weaving Looms in Place by Type and Width	1964

## EXPLANATION OF TERMS

Cotton Fabrics--Wholly or chiefly by weight of cotton.

### Blends and Mixtures

Fabrics made from more than one fiber are classified in the same way as other fabrics, i.e., according to whether the fabric is chiefly cotton, wool, or manmade fiber. As examples, a fabric which is 55 percent cotton and 45 percent rayon is classified in the cotton section; a fabric which is 40 percent cotton, 30 percent rayon, and 30 percent acetate is classified in the manmade fibers section.

Blends and mixtures which are by weight 50 percent of one fiber and 50 percent of another fiber are classified according to the fiber of

Current Industrial Reports Series MQ-22T.1 (69)-1

greatest value. As an example, a fabric which is 50 percent polyester and 50 percent cotton is classified as polyester.

Fabrics which are 95 percent or more of one fiber are not considered blends. Such fabrics are included in the 100 percent classification for that fiber.

#### Units of Quantity

Production is reported in thousands of linear yards except as follows:

Blanketing--In thousands of linear yards, 72 inch width or equivalent.

Selected items in thousands of pounds as noted.

Production--Represents total production of cotton fabrics by all known weaving mills regardless of their primary activity.

Looms Operating--Represents number of looms operating on the specific fabrics at end of quarter.

Yarns Consumed Loom Hours, and Stocks of Selected Filament Yarns--Represents data for all mills primarily producing cotton broadwoven fabrics.

MILL CLASSIFICATION - Mills are classified according to the major type of fabric produced. However, this classification is not made on a quarterly basis. For 1967, particular mills whose primary activity had become the weaving of man-made fiber fabrics rather than cotton were given revised mill classifications. Consequently, data on loom hours, yarn consumption, and stocks shown in tables 3, 4, and 5 are not comparable with information shown for 1966 and prior years. An overlap between the old and new mill assignment is not available. It should be noted, however, that the combination of data shown in this series (M22T.1) and the manmade fiber broadwoven goods series (M22T.2) for yarns consumed, loom hours, and stocks are comparable.

MQ-22T.1(69)-2

## Cotton Broadwoven Goods Second Quarter 1969

FOR RELEASE: November 21, 1969

SERIES: MQ-22T.1(69)-2

The statistics in this publication are based on a survey of manufacturers and represent the entire U.S. production of cotton broadwoven fabrics over 12 inches in width. Estimates are included for companies whose reports were not received in time for tabulation. A more complete description of the survey appears on pages 8 and 9.

## DESCRIPTION OF SURVEY

The statistics in this publication and in the other MQ-22T reports were collected on Census Form MQ-22T, Broad Fabrics (Except Knit); Woven, Nonwoven, and Felts from a panel of approximately 650 producers who account for about 95 percent of the total production. Estimates are included in the published figures for an additional 150 small producers reporting annually.

The current quarter's figures may also include estimates for respondents whose reports were not received in time for tabulation. Such missing figures are imputed from the quarter-to-quarter movements shown by reporting firms and are generally limited to a maximum of 10 percent to any one item. Individual items with higher imputation rates are footnoted.

The imputation rate is not an explicit indicator of the potential error in published figures due to nonresponse, because the actual quarterly movements for nonrespondents may or may not closely agree with the imputed movements. The probable range of difference between the actual and imputed figures is unknown. The degree of uncertainty regarding the accuracy of the data, however, increases as the percentage of imputation increases. Figures with high imputation rates, therefore, should be used with caution.

Statistics for previous quarters may be revised, due to receipt of corrected data from respondents, including late reports for which estimates were made, and other corrections. Figures which were revised significantly are indicated by footnotes.

The data in this report are not adjusted for seasonal variation or number of working days.

## RELATED REPORTS

The following is a list of selected current and recent special textile reports published by the Census Bureau in the Current Industrial Reports series:

Series No.	Title	Frequency
M22A	Woven Fabrics--Production, Inventories, and Unfilled Orders	Monthly
M22D	Consumption on the Woolen and Worsted Systems	Monthly
M22P	Cotton, Manmade Fiber Staple, and Linters--Consumption, Stocks, and Spindle Activity	Monthly

MQ-22K	Shipments of Knit Cloth, Including Interplant Transfers	Quarterly
MA-22F	Yarn Production	Annual
MA-22G	Narrow Fabrics	Annual
MA-22S	Broadwoven Fabrics Finished	Annual
MA-22T.5	Nonwoven Fabrics	Annual
MA-23X	Sheets, Pillowcases, and Towels	Annual

## SPECIAL TEXTILE REPORTS

At intervals of a few years, special supplemental reports on broadwoven fabrics are also published. Recent reports of this type are:

Series	Title	Period Covered
M22T Supp.	Broadwoven Fabrics--Blends and Mixtures	1965
M22T.1 Supp.	Broadwoven Fabrics, Average Weight and Width of Fabric (Cotton, Manmade Fiber, and Wool Fabrics)	First Quarter 1963
M22T-1 Supp.	Broad Fabric Weaving Looms in Place by Type and Width	1964

## EXPLANATION OF TERMS

Cotton Fabrics--Wholly or chiefly by weight of cotton.

### Blends and Mixtures

Fabrics made from more than one fiber are classified in the same way as other fabrics, i.e., according to whether the fabric is chiefly cotton, wool, or manmade fiber. As examples, a fabric which is 55 percent cotton and 45 percent rayon is classified in the cotton section; a fabric which is 40 percent cotton, 30 percent rayon, and 30 percent acetate is classified in the manmade fibers section.

Blends and mixtures which are by weight 50 percent of one fiber and 10 percent of another fiber are classified according to the fiber of

Current Industrial Reports Series MQ-22T.1(69)-2

greatest value. As an example, a fabric which is 50 percent polyester and 50 percent cotton is classified as polyester.

Fabrics which are 95 percent or more of one fiber are not considered blends. Such fabrics are included in the 100 percent classification for that fiber.

#### Units of Quantity

Production is reported in thousands of linear yards except as follows:

Blanketing--In thousands of linear yards, 72 inch width or equivalent.

Selected items in thousands of pounds as noted.

Production--Represents total production of cotton fabrics by all known weaving mills regardless of their primary activity.

Looms Operating--Represents number of looms operating on the specific fabrics at end of quarter.

Yarns Consumed Loom Hours, and Stocks of Selected Filament Yarns--Represents data for all mills primarily producing cotton broadwoven fabrics.

MILL CLASSIFICATION - Mills are classified according to the major type of fabric produced. However, this classification is not made on a quarterly basis. For 1967, particular mills whose primary activity had become the weaving of man-made fiber fabrics rather than cotton were given revised mill classifications. Consequently, data on loom hours, yarn consumption, and stocks shown in tables 3, 4, and 5 are not comparable with information shown for 1966 and prior years. An overlap between the old and new mill assignment is not available. It should be noted, however, that the combination of data shown in this series (M22T.1) and the manmade fiber broadwoven goods series (M22T.2) for yarns consumed, loom hours, and stocks are comparable.

## THE NATIONAL ECONOMIC GOAL

Sustained maximum growth in a free market economy, without inflation, under conditions of full employment and equal opportunity

## THE DEPARTMENT OF COMMERCE

The historic mission of the Department is "to foster, promote and develop the foreign and domestic commerce" of the United States. This has evolved, as a result of legislative and administrative additions, to encompass broadly the responsibility to foster, serve and promote the nation's economic development and technological advancement. The Department seeks to fulfill this mission through these activities:

## Cotton Broadwoven Goods

### Third Quarter 1969

FOR RELEASE: February 16, 1970

SERIES: MQ-22T.1(69)-3

The statistics in this publication are based on a survey of manufacturers and represent the entire U.S. production of cotton broadwoven fabrics over 12 inches in width. Estimates are included for companies whose reports were not received in time for tabulation. A more complete description of the survey appears on pages 8 and 9.

Table 1. Summary of Production, by Class of Fabric: 1963 to 1969

(Millions of linear yards)

## DESCRIPTION OF SURVEY

The statistics in this publication and in the other MQ-22T reports were collected on Census Form MQ-22T, Broad Fabrics (Except Knit); Woven, Nonwoven, and Felts from a panel of approximately 650 producers who account for about 95 percent of the total production. Estimates are included in the published figures for an additional 150 small producers reporting annually.

The current quarter's figures may also include estimates for respondents whose reports were not received in time for tabulation. Such missing figures are imputed from the quarter-to-quarter movements shown by reporting firms and are generally limited to a maximum of 10 percent to any one item. Individual items with higher imputation rates are footnoted.

The imputation rate is not an explicit indicator of the potential error in published figures due to nonresponse, because the actual quarterly movements for nonrespondents may or may not closely agree with the imputed movements. The probable range of difference between the actual and imputed figures is unknown. The degree of uncertainty regarding the accuracy of the data, however, increases as the percentage of imputation increases. Figures with high imputation rates, therefore, should be used with caution.

Statistics for previous quarters may be revised, due to receipt of corrected data from respondents, including late reports for which estimates were made, and other corrections. Figures which were revised significantly are indicated by footnotes.

The data in this report are not adjusted for seasonal variation or number of working days.

## RELATED REPORTS

The following is a list of selected current and recent special textile reports published by the Census Bureau in the Current Industrial Reports series:

Series No.	Title	Frequency
M22A	Woven Fabrics--Production, Inventories, and Unfilled Orders	Monthly
M22D	Consumption on the Woolen and Worsted Systems	Monthly
M22P	Cotton, Manmade Fiber Staple, and Linters--Consumption, Stocks, and Spindle Activity	Monthly

MQ-22K	Shipments of Knit Cloth, Including Interplant Transfers	Quarterly
MA-22F	Yarn Production	Annual
MA-22G	Narrow Fabrics	Annual
MA-22S	Broadwoven Fabrics Finished	Annual
MA-22T.5	Nonwoven Fabrics	Annual
MA-23X	Sheets, Pillowcases, and Towels	Annual

## SPECIAL TEXTILE REPORTS

At intervals of a few years, special supplemental reports on broadwoven fabrics are also published. Recent reports of this type are:

Series	Title	Period Covered
M22T Supp.	Broadwoven Fabrics--Blends and Mixtures	1965
M22T.1 Supp.	Broadwoven Fabrics, Average Weight and Width of Fabric (Cotton, Manmade Fiber, and Wool Fabrics)	First Quarter 1963
M22T-1 Supp.	Broad Fabric Weaving Looms in Place by Type and Width	1964

## EXPLANATION OF TERMS

Cotton Fabrics--Wholly or chiefly by weight of cotton.

### Blends and Mixtures

Fabrics made from more than one fiber are classified in the same way as other fabrics, i.e., according to whether the fabric is chiefly cotton, wool, or manmade fiber. As examples, a fabric which is 55 percent cotton and 45 percent rayon is classified in the cotton section; a fabric which is 40 percent cotton, 30 percent rayon, and 30 percent acetate is classified in the manmade fibers section.

Blends and mixtures which are by weight 50 percent of one fiber and 10 percent of another fiber are classified according to the fiber of

greatest value. As an example, a fabric which is 50 percent polyester and 50 percent cotton is classified as polyester.

Fabrics which are 95 percent or more of one fiber are not considered blends. Such fabrics are included in the 100 percent classification for that fiber.

#### Units of Quantity

Production is reported in thousands of linear yards except as follows:

Blanketing--In thousands of linear yards, 72 inch width or equivalent.

Selected items in thousands of pounds as noted.

Production--Represents total production of cotton fabrics by all known weaving mills regardless of their primary activity.

Looms Operating--Represents number of looms operating on the specific fabrics at end of quarter.

Yarns Consumed Loom Hours, and Stocks of Selected Filament Yarns--Represents data for all mills primarily producing cotton broadwoven fabrics.

MILL CLASSIFICATION - Mills are classified according to the major type of fabric produced. However, this classification is not made on a quarterly basis. For 1967, particular mills whose primary activity had become the weaving of man-made fiber fabrics rather than cotton were given revised mill classifications. Consequently, data on loom hours, yarn consumption, and stocks shown in tables 3, 4, and 5 are not comparable with information shown for 1966 and prior years. An overlap between the old and new mill assignment is not available. It should be noted, however, that the combination of data shown in this series (M22T.1) and the manmade fiber broadwoven goods series (M22T.2) for yarns consumed, loom hours, and stocks are comparable.

# 1969 EDITION

Select an encyclopedia, add some information from an almanac, and still you have only a "fraction of the facts" to be found between the covers of the BRAND NEW 1969 Statistical Abstract of the United States. This book, one of the most widely-used reference volumes of government and private industry, includes both current data and historical trends on the social, economic, and governmental characteristics of the United States. The statistics appear in over 1,300 tables and charts, and come from over 200 government, private, and international agencies. The Guide to Sources in the Statistical Abstract lists over 800 statistical publications on 50 major subjects, including population, government, health, education, agriculture, industry, construction, recreation, trade, and scores of other subjects. Whoever you are, whatever your line of work, business, or profession—when you want the facts, you'll find them in the new Statistical Abstract of the United States, 1969.

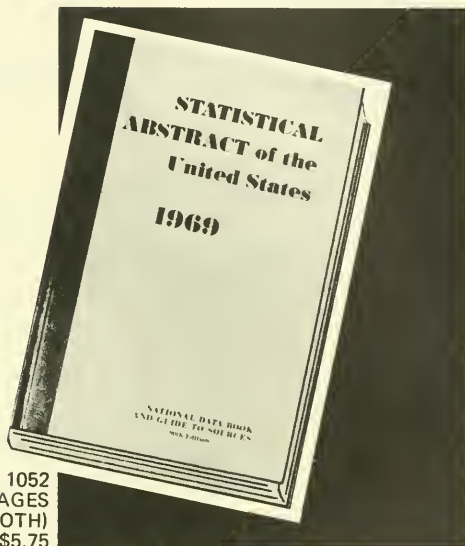

For complete urban information, the Abstract features an individual 60-page section of current data for over 200 metropolitan areas

## CURRENT INDUSTRIAL REPORTS

## Cotton Broadwoven Goods

Fourth Quarter 1969

U.S. DEPARTMENT OF COMMERCE / Bureau of the Census

FOR RELEASE: March 31, 1970

SERIES: MQ-22T.1(69)-4

The statistics in this publication are based on a survey of manufacturers and represent the entire U.S. production of cotton broadwoven fabrics over 12 inches in width. Estimates are included for companies whose reports were not received in time for tabulation. A more complete description of the survey appears on pages 8 and 9.

Table 1. Summary of Production, by Class of Fabric: 1963 to 1969

## DESCRIPTION OF SURVEY

The statistics in this publication and in the other MQ-22T reports were collected on Census Form MQ-22T, Broad Fabrics (Except Knit): Woven, Nonwoven, and Felts from a panel of approximately 650 producers who account for about 95 percent of the total production. Estimates are included in the published figures for an additional 150 small producers reporting annually.

The current quarter's figures may also include estimates for respondents whose reports were not received in time for tabulation. Such missing figures are imputed from the quarter-to-quarter movements shown by reporting firms and are generally limited to a maximum of 10 percent to any one item. Individual items with higher imputation rates are footnoted.

The imputation rate is not an explicit indicator of the potential error in published figures due to nonresponse, because the actual quarterly movements for nonrespondents may or may not closely agree with the imputed movements. The probable range of difference between the actual and imputed figures is unknown. The degree of uncertainty regarding the accuracy of the data, however, increases as the percentage of imputation increases. Figures with high imputation rates, therefore, should be used with caution.

Statistics for previous quarters may be revised, due to receipt of corrected data from respondents, including late reports for which estimates were made, and other corrections. Figures which were revised significantly are indicated by footnotes.

The data in this report are not adjusted for seasonal variation or number of working days.

## RELATED REPORTS

The following is a list of selected current and recent special textile reports published by the Census Bureau in the Current Industrial Reports series:

Series No.	Title	Frequency
M22A	Woven Fabrics--Production, Inventories, and Unfilled Orders	Monthly
M22D	Consumption on the Woolen and Worsted Systems	Monthly
M22P	Cotton, Manmade Fiber Staple, and Linters--Consumption, Stocks, and Spindle Activity	Monthly

MQ-22K	Shipments of Knit Cloth, Including Interplant Transfers	Quarterly
MA-22F	Yarn Production	Annual
MA-22G	Narrow Fabrics	Annual
MA-22S	Broadwoven Fabrics Finished	Annual
MA-22T.5	Nonwoven Fabrics	Annual
MA-23X	Sheets, Pillowcases, and Towels	Annual

## SPECIAL TEXTILE REPORTS

At intervals of a few years, special supplemental reports on broadwoven fabrics are also published. Recent reports of this type are:

Series	Title	Period Covered
M22T Supp.	Broadwoven Fabrics--Blends and Mixtures	1965
M22T.1 Supp.	Broadwoven Fabrics, Average Weight and Width of Fabric (Cotton, Manmade Fiber, and Wool Fabrics)	First Quarter 1968
M22T-1 Supp.	Broad Fabric Weaving Looms in Place by Type and Width	1964

## EXPLANATION OF TERMS

Cotton Fabrics--Wholly or chiefly by weight of cotton.

### Blends and Mixtures

Fabrics made from more than one fiber are classified in the same way as other fabrics, i.e., according to whether the fabric is chiefly cotton, wool, or manmade fiber. As examples, a fabric which is 55 percent cotton and 45 percent rayon is classified in the cotton section; a fabric which is 40 percent cotton, 30 percent rayon, and 30 percent acetate is classified in the manmade fibers section.

Blends and mixtures which are by weight 50 percent of one fiber and 10 percent of another fiber are classified according to the fiber of

greatest value. As an example, a fabric which is 50 percent polyester and 50 percent cotton is classified as polyester.

Fabrics which are 95 percent or more of one fiber are not considered blends. Such fabrics are included in the 100 percent classification for that fiber.

#### Units of Quantity

Production is reported in thousands of linear yards except as follows:

Blanketing--In thousands of linear yards, 72 inch width or equivalent.

Selected items in thousands of pounds as noted.

Production--Represents total production of cotton fabrics by all known weaving mills regardless of their primary activity.

Looms Operating--Represents number of looms operating on the specific fabrics at end of quarter.

Yarns Consumed Loom Hours, and Stocks of Selected Filament Yarns--Represents data for all mills primarily producing cotton broadwoven fabrics.

MILL CLASSIFICATION - Mills are classified according to the major type of fabric produced. However, this classification is not made on a quarterly basis. For 1967, particular mills whose primary activity had become the weaving of man-made fiber fabrics rather than cotton were given revised mill classifications. Consequently, data on loom hours, yarn consumption, and stocks shown in tables 3, 4, and 5 are not comparable with information shown for 1966 and prior years. An overlap between the old and new mill assignment is not available. It should be noted, however, that the combination of data shown in this series (M22T.1) and the manmade fiber broadwoven goods series (M22T.2) for yarns consumed, loom hours, and stocks are comparable.

# IT'S BRAND NEW!

To inform you about statistical data available from data files and special tabulations, the Census Bureau offers you the brand new. . .

**Guide to Census Bureau Data Files and Special Tabulations** outlines the programs and activities of the Census Bureau, describes the data files and special tabulations originating during the 1958-1968 period and currently available, offers information on how these materials may be obtained, defines the geographic areas for which the Census Bureau tabulates statistics, and includes descriptions of other unpublished materials such as computer programs.

*Data files and special tabulations are available on the following subjects--*

Agriculture  
Construction  
County and city data  
Distribution and services  
Retail trade  
Wholesale trade  
Selected services  
Foreign trade  
General economic statistics  
Long Term Economic Growth  
Business Conditions Digest  
County Business Patterns  
Geographic reports and maps

## Broadwoven Goods

### Summary of Looms in Place

#### December 31, 1969

U.S. DEPARTMENT OF COMMERCE / Bureau of the Census

FOR RELEASE: February 9, 1971

SERIES: MQ-22T(69) Supplement

The data shown in this report summarizes the information published in the quarterly MQ-22T series. No revisions have been made to data previously published.

Looms in place at broadwoven fabric mills at the end of 1969 totaled 370,907. Of the total number of looms in place, there were 360,878 in place at cotton and manmade fiber fabric mills, 7,853 in woolen and worsted mills and 2,176 at tire cord and tire fabric mills.

Coverage - Data are based on quarterly reports received on Census Form MQ-22T, Broad Fabrics (except knit): Woven, Nonwoven, and Felts. Estimates are included for respondents whose reports were not received in time for tabulation.

Beginning with first quarter 1969, these data, by type of mill, have been published separately on a quarterly basis in each of the Current Industrial Report Series MQ-22T (Cotton, Manmade, Wool, and Tire Cord).

<sup>1</sup>Mill classification is determined by the primary type of fabric produced by the establishment. This assignment is based on their output in 1967.

## Cotton Broadwoven Goods

### Summary for 1969

U.S. DEPARTMENT OF COMMERCE / Bureau of the Census

Boston Public Library  
Superintendent of Documents

FOR RELEASE: November 16, 1970

SERIES: MQ-22T.1(69)-5

DEC 19 1970

DEPOSITORY

The data shown in this report summarize the information published in the quarterly MQ-22T.1 series. Any revisions made to quarterly data previously published in this series are so noted.

#### DESCRIPTION OF SURVEY

The statistics in this publication were published in Census quarterly series MQ-22T.1 Cotton Broadwoven Goods, from a sample of mills accounting for approximately 98 percent of the total U.S. production of cotton broadwoven goods. Estimates have been included for manufacturers whose reports were not received and are based on their production as reported in the 1968 annual survey.

The data in this report are not adjusted for seasonal variation or number of working days.

#### COVERAGE

The information contained in this report is collected on Census quarterly form MQ-22T, "Broad Fabrics (Except Knit): Woven, Nonwoven, and Felts." A separate report is requested from each mill, although in some instances the "mill" reported as one unit to the Census Bureau constitutes more than one location.

Fabrics woven on commission are reported in this series by the commission mill, not by the company for which the work is contracted.

#### COVERAGE OF INDIVIDUAL TABLES

The production figures shown in tables 1 and 2 represent total production of the specified

fabrics by all weaving mills regardless of their primary activity. However, because a single report is collected from an individual mill, the information shown in tables 3, 4, 5, and 6 relates to the entire activity of all mills primarily producing cotton fabrics. Insofar as these mills produced other fabrics (manmade fiber or wool) as a secondary project, the yarn consumption or loom activity for such fabrics would be included in this report. Similarly, the yarns consumed in the manufacture of cotton fabrics produced as a secondary product in a mill primarily producing manmade fiber fabrics is excluded from this report and included in the Current Industrial Reports publication relating to manmade fiber broadwoven fabrics.

#### WOOLEN AND WORSTED MILLS

Mills with woollen and worsted machinery which primarily produce manmade fiber fabrics do not report yarn consumption data. Separate data on knit cloth are published by the Bureau of the Census in quarterly series MQ-22K, Shipments of Knit Cloth, Including Interplant Transfers, beginning with the fourth quarter 1966. Data are available upon request.

#### DEFINITIONS OF TERMS

Broad Fabrics--Fabric over 12" in width, as made.

Cotton Fabrics--Includes fabric wholly or chiefly by weight of cotton.

Blends, Chiefly Cotton--Includes fabrics chiefly by weight of cotton and containing other fibers, such as nylon, polyester, etc.

Blends and Mixtures--Fabrics which are made from more than one fiber are classified according to whether the fabric is chiefly cotton, wool, or manmade fiber. As examples, a fabric made of 55 percent cotton and 45 percent rayon is included in the cotton report; a fabric which is 40 percent cotton, 30 percent rayon, and 30 percent acetate is classified in the manmade fibers report. Blends and mixtures which are by weight 50 percent of one fiber and 50 percent of another fiber are classified according to the fiber of greatest value. As an example, a fabric which is 50 percent polyester and 50 percent cotton is classified as polyester. Fabrics which are 95 percent or more of one fiber are included in the 100 percent classification for that fiber.

Series	Title	Period Covered
MQ-22T Supp.	Broadwoven Fabrics--Blends and Mixtures	1965
MQ-22T.1	Broadwoven Fabrics, Average Weight and Width of Fabric (Cotton, Manmade Fiber, and Wool Fabrics)	First Quarter 1968
MQ-22T.1 Supp.	Broad Fabric Weaving Looms in Place by Type and Width	1964

### SPECIAL TEXTILE REPORTS

At intervals of a few years, special supplemental reports on broadwoven fabrics are also published. Recent reports of this type are:

### ACKNOWLEDGMENTS

This report was prepared in the Industry Division, Bureau of the Census, under the direction of Robert J. Nealon, Chief, Foods, Textiles, and Apparel. Evelyn O. Denny, Chief, Textiles, assisted by Charles T. Lee, was directly responsible for the review of the data and preparation of the report. Owen C. Gretton, Chief of the Division, and Elmer S. Biles, Assistant Chief, provided overall direction and coordination to this project.

Table 1. SUMMARY OF PRODUCTION, BY CLASS OF FABRIC: 1960 TO 1969

(Millions of linear yards)

Year	Cotton broadwoven goods, total <sup>1</sup>	Duck and allied fabrics	Sheeting and allied coarse and medium yarn fabrics	Print cloth yarn fabrics	Carded colored yarn fabrics	Towels, toweling, and dishcloths	Napped fabrics, blankets, and blanketing	Fine cotton fabrics	Other woven cotton fabrics and specialties
1969.....	6,964.9	274.6	1,969.6	2,748.4	319.0	590.9	140.3	474.9	447.4

MQ-22T.1(70)-1

## CURRENT INDUSTRIAL REPORTS

Cotton Broadwoven Gray Goods  
First Quarter 1970

U.S. DEPARTMENT OF COMMERCE / Bureau of the Census

FOR RELEASE: July 16, 1970

SERIES: MQ-22T.1(70)-1

The statistics in this publication are based on a survey of manufacturers and represent the entire U.S. production of cotton broadwoven gray fabrics over 12 inches in width. Estimates are included for companies whose reports were not received in time for tabulation. A more complete description of the survey appears on pages 8 and 9.

Table 1. Summary of Production, by Class of Fabric: 1964 to 1970

## DESCRIPTION OF SURVEY

The statistics in this publication and in the other MQ-22T reports were collected on Census Form MQ-22T, Broad Fabrics (Except Knit); Woven, Nonwoven, and Felts from a panel of approximately 650 producers who account for about 95 percent of the total production. Estimates are included in the published figures for an additional 150 small producers reporting annually.

The current quarter's figures may also include estimates for respondents whose reports were not received in time for tabulation. Such missing figures are imputed from the quarter-to-quarter movements shown by reporting firms and are generally limited to a maximum of 10 percent to any one item. Individual items with higher imputation rates are footnoted.

The imputation rate is not an explicit indicator of the potential error in published figures due to nonresponse, because the actual quarterly movements for nonrespondents may or may not closely agree with the imputed movements. The probable range of difference between the actual and imputed figures is unknown. The degree of uncertainty regarding the accuracy of the data, however, increases as the percentage of imputation increases. Figures with high imputation rates, therefore, should be used with caution.

Statistics for previous quarters may be revised, due to receipt of corrected data from respondents, including late reports for which estimates were made, and other corrections. Figures which were revised significantly are indicated by footnotes.

The data in this report are not adjusted for seasonal variation or number of working days.

## RELATED REPORTS

The following is a list of selected current and recent special textile reports published by the Census Bureau in the Current Industrial Reports series:

Series No.	Title	Frequency
M22A	Woven Fabrics--Production, Inventories, and Unfilled Orders	Monthly
M22D	Consumption on the Woolen and Worsted Systems	Monthly
M22P	Cotton, Manmade Fiber Staple, and Linters--Consumption, Stocks, and Spindle Activity	Monthly

MQ-22K	Shipments of Knit Cloth, Including Interplant Transfers	Quarterly
MA-22F	Yarn Production	Annual
MA-22G	Narrow Fabrics	Annual
MA-22S	Broadwoven Fabrics Finished	Annual
MA-22T.5	Nonwoven Fabrics	Annual
MA-23X	Sheets, Pillowcases, and Towels	Annual

## SPECIAL TEXTILE REPORTS

At intervals of a few years, special supplemental reports on broadwoven fabrics are also published. Recent reports of this type are:

Series	Title	Period Covered
M22T Supp.	Broadwoven Fabrics--Blends and Mixtures	1965
M22T.1 Supp.	Broadwoven Fabrics, Average Weight and Width of Fabric (Cotton, Manmade Fiber, and Wool Fabrics)	First Quarter 1968
M22T-1 Supp.	Broad Fabric Weaving Looms in Place by Type and Width	1964

## EXPLANATION OF TERMS

Cotton Fabrics--Wholly or chiefly by weight of cotton.

### Blends and Mixtures

Fabrics made from more than one fiber are classified in the same way as other fabrics, i.e., according to whether the fabric is chiefly cotton, wool, or manmade fiber. As examples, a fabric which is 55 percent cotton and 45 percent rayon is classified in the cotton section; a fabric which is 40 percent cotton, 30 percent rayon, and 30 percent acetate is classified in the manmade fibers section.

Blends and mixtures which are by weight 50 percent of one fiber and 10 percent of another fiber are classified according to the fiber of

Current Industrial Reports Series MQ-22T.1(70)

greatest value. As an example, a fabric which is 50 percent polyester and 50 percent cotton is classified as polyester.

Fabrics which are 95 percent or more of one fiber are not considered blends. Such fabrics are included in the 100 percent classification for that fiber.

#### Units of Quantity

Production is reported in thousands of linear yards except as follows:

Blanketing--In thousands of linear yards, 72 inch width or equivalent.

Selected items in thousands of pounds as noted.

Production--Represents total production of cotton fabrics by all known weaving mills regardless of their primary activity.

Looms Operating--Represents number of looms operating on the specific fabrics at end of quarter.

Yarns Consumed Loom Hours, and Stocks of Selected Filament Yarns--Represents data for all mills primarily producing cotton broadwoven fabrics.

MILL CLASSIFICATION - Mills are classified according to the major type of fabric produced. However, this classification is not made on a quarterly basis. For 1967, particular mills whose primary activity had become the weaving of man-made fiber fabrics rather than cotton were given revised mill classifications. Consequently, data on loom hours, yarn consumption, and stocks shown in tables 3, 4, and 5 are not comparable with information shown for 1966 and prior years. An overlap between the old and new mill assignment is not available. It should be noted, however, that the combination of data shown in this series (M22T.1) and the manmade fiber broadwoven goods series (M22T.2) for yarns consumed, loom hours, and stocks are comparable.

## THE NATIONAL ECONOMIC GOAL

Sustained maximum growth in a free market economy, without inflation, under conditions of full employment and equal opportunity

## THE DEPARTMENT OF COMMERCE

The historic mission of the Department is "to foster, promote and develop the foreign and domestic commerce" of the United States. This has evolved, as a result of legislative and administrative additions, to encompass broadly the responsibility to foster, serve and promote the nation's economic development and technological advancement. The Department seeks to fulfill this mission through these activities:

## MISSION AND FUNCTIONS OF THE DEPARTMENT OF COMMERCE

"to foster, serve and promote the nation's economic development and technological advancement"

Participating with other government agencies in the creation of national policy, through the President's Cabinet and its subdivisions.

- Cabinet Committee on Economic Policy
- Urban Affairs Council
- Environmental Quality Council

Promoting progressive business policies and growth.

- Business and Defense Services Administration
- Office of Field Services

Assisting states, communities and individuals toward economic progress.

- Economic Development Administration
- Regional Planning Commissions
- Office of Minority Business Enterprise

Strengthening the international economic position of the United States.

- Bureau of International Commerce
- Office of Foreign Commercial Services
- Office of Foreign Direct Investments
- United States Travel Service
- Maritime Administration

Assuring effective use and growth of the nation's scientific and technical resources.

- Environmental Science Services Administration
- Patent Office
- National Bureau of Standards
- Office of Telecommunications
- Office of State Technical Services

Acquiring, analyzing and disseminating information concerning the nation and the economy to help achieve increased social and economic benefit.

- Bureau of the Census
- Office of Business Economics

NOTE: This schematic is neither an organization chart nor a program outline for budget purposes. It is a general statement of the Department's mission in relation to the national goal of economic development.

# CURRENT INDUSTRIAL REPORTS

## Cotton Broadwoven Gray Goods Second Quarter 1970

U.S. DEPARTMENT OF COMMERCE / Bureau of the Census

FOR RELEASE: October 20, 1970

SERIES: MQ-22T.1(70)-2

The statistics in this publication are based on a survey of manufacturers and represent the entire U.S. production of cotton broadwoven gray fabrics over 12 inches in width. Estimates are included for companies whose reports were not received in time for tabulation. A more complete description of the survey appears on pages 8 and 9.

Table 1. Summary of Production, by Class of Fabric: 1964 to 1970

## DESCRIPTION OF SURVEY

The statistics in this publication and in the other MQ-22T reports were collected on Census Form MQ-22T, Broad Fabrics (Except Knit); Woven, Nonwoven, and Felts from a panel of approximately 650 producers who account for about 95 percent of the total production. Estimates are included in the published figures for an additional 150 small producers reporting annually.

The current quarter's figures may also include estimates for respondents whose reports were not received in time for tabulation. Such missing figures are imputed from the quarter-to-quarter movements shown by reporting firms and are generally limited to a maximum of 10 percent to any one item. Individual items with higher imputation rates are footnoted.

The imputation rate is not an explicit indicator of the potential error in published figures due to nonresponse, because the actual quarterly movements for nonrespondents may or may not closely agree with the imputed movements. The probable range of difference between the actual and imputed figures is unknown. The degree of uncertainty regarding the accuracy of the data, however, increases as the percentage of imputation increases. Figures with high imputation rates, therefore, should be used with caution.

Statistics for previous quarters may be revised, due to receipt of corrected data from respondents, including late reports for which estimates were made, and other corrections. Figures which were revised significantly are indicated by footnotes.

The data in this report are not adjusted for seasonal variation or number of working days.

## RELATED REPORTS

The following is a list of selected current and recent special textile reports published by the Census Bureau in the Current Industrial Reports series:

<u>Series No.</u>	<u>Title</u>	<u>Frequency</u>
M22A	Woven Fabrics--Production, Inventories, and Unfilled Orders	Monthly
M22D	Consumption on the Woolen and Worsted Systems	Monthly
M22P	Cotton, Manmade Fiber Staple, and Linters--Consumption, Stocks, and Spindle Activity	Monthly

MQ-22K	Shipments of Knit Cloth, Including Interplant Transfers	Quarterly
MA-22F	Yarn Production	Annual
MA-22G	Narrow Fabrics	Annual
MA-22S	Broadwoven Fabrics Finished	Annual
MA-22T.5	Nonwoven Fabrics	Annual
MA-22X	Sheets, Pillowcases, and Towels	Annual

## SPECIAL TEXTILE REPORTS

At intervals of a few years, special supplemental reports on broadwoven fabrics are also published. Recent reports of this type are:

<u>Series</u>	<u>Title</u>	<u>Period Covered</u>
M22T Supp.	Broadwoven Fabrics--Blends and Mixtures	1965
M22T.1 Supp.	Broadwoven Fabrics, Average Weight and Width of Fabric (Cotton, Manmade Fiber, and Wool Fabrics)	First Quarter 1968
M22T-1 Supp.	Broad Fabric Weaving Looms in Place by Type and Width	1964

## EXPLANATION OF TERMS

Cotton Fabrics--Wholly or chiefly by weight of cotton.

### Blends and Mixtures

Fabrics made from more than one fiber are classified in the same way as other fabrics, i.e., according to whether the fabric is chiefly cotton, wool, or manmade fiber. As examples, a fabric which is 55 percent cotton and 45 percent rayon is classified in the cotton section; a fabric which is 40 percent cotton, 30 percent rayon, and 30 percent acetate is classified in the manmade fibers section.

Blends and mixtures which are by weight 50 percent of one fiber and 10 percent of another fiber are classified according to the fiber of

Current Industrial Reports Series MQ-22T.1(70)

greatest value. As an example, a fabric which is 50 percent polyester and 50 percent cotton is classified as polyester.

Fabrics which are 95 percent or more of one fiber are not considered blends. Such fabrics are included in the 100 percent classification for that fiber.

#### Units of Quantity

Production is reported in thousands of linear yards except as follows:

Blanketing--In thousands of linear yards, 72 inch width or equivalent.

Selected items in thousands of pounds as noted.

Production--Represents total production of cotton fabrics by all known weaving mills regardless of their primary activity.

Looms Operating--Represents number of looms operating on the specific fabrics at end of quarter.

Yarns Consumed Loom Hours, and Stocks of Selected Filament Yarns--Represents data for all mills primarily producing cotton broadwoven fabrics.

MILL CLASSIFICATION - Mills are classified according to the major type of fabric produced. However, this classification is not made on a quarterly basis. For 1967, particular mills whose primary activity had become the weaving of man-made fiber fabrics rather than cotton were given revised mill classifications. Consequently, data on loom hours, yarn consumption, and stocks shown in tables 3, 4, and 5 are not comparable with information shown for 1966 and prior years. An overlap between the old and new mill assignment is not available. It should be noted, however, that the combination of data shown in this series (M22T.1) and the manmade fiber broadwoven goods series (M22T.2) for yarns consumed, loom hours, and stocks are comparable.

# 1970

... a NEW decade ... and a NEW LOOK for the 1970 STATISTICAL ABSTRACT OF THE UNITED STATES!

1042 Pages  
(CLOTH) \$5.75

Between the covers of this 91st edition of the "Stat Abstract," as it is popularly known, are the Nation's most sought-after facts and figures in the world of government and private enterprise. Statesmen . . . businessmen . . . scientists . . . teachers and students alike FIND the information they want on the social, economic, and governmental characteristics of the United States — both current and historical. Statistics are presented in over 1,300 tables and charts derived from over 200 government, private, and international agencies. A special introductory table features RECENT TRENDS for selected measures of social and economic change. The GUIDE TO SOURCES lists over 800 statistical publications on 50 major subjects, such as population, government, health, education, agriculture, industry, construction, recreation, trade, and scores of other subjects. Whatever your line of work, business, profession, or avocational interests — when you need the facts, you want THE comprehensive and authoritative STATISTICAL ABSTRACT of the United States, 1970!

For users of urban information, the Abstract features an individual 66-page section of current data for over 200 metropolitan areas entitled, "Metropolitan Area Statistics." available as a separate reprint, priced at 35¢.

# Cotton Broadwoven Gray Goods

Third Quarter 1970

U.S. DEPARTMENT OF COMMERCE / Bureau of the Census

FOR RELEASE: January 25, 1971

SERIES: MQ-22T.1(70)-3

The statistics in this publication are based on a survey of manufacturers and represent the entire U.S. production of cotton broadwoven gray fabrics over 12 inches in width. Estimates are included for companies whose reports were not received in time for tabulation. A more complete description of the survey appears on pages 8 and 9.

## DESCRIPTION OF SURVEY

The statistics in this publication and in the other MQ-22T reports were collected on Census Form MQ-22T, Broad Fabrics (Except Knit): Woven, Nonwoven, and Felts from a panel of approximately 650 producers who account for about 95 percent of the total production. Estimates are included in the published figures for an additional 150 small producers reporting annually.

The current quarter's figures may also include estimates for respondents whose reports were not received in time for tabulation. Such missing figures are imputed from the quarter-to-quarter movements shown by reporting firms and are generally limited to a maximum of 10 percent to any one item. Individual items with higher imputation rates are footnoted.

The imputation rate is not an explicit indicator of the potential error in published figures due to nonresponse, because the actual quarterly movements for nonrespondents may or may not closely agree with the imputed movements. The probable range of difference between the actual and imputed figures is unknown. The degree of uncertainty regarding the accuracy of the data, however, increases as the percentage of imputation increases. Figures with high imputation rates, therefore, should be used with caution.

Statistics for previous quarters may be revised, due to receipt of corrected data from respondents, including late reports for which estimates were made, and other corrections. Figures which were revised significantly are indicated by footnotes.

The data in this report are not adjusted for seasonal variation or number of working days.

## RELATED REPORTS

The following is a list of selected current and recent special textile reports published by the Census Bureau in the Current Industrial Reports series:

<u>Series No.</u>	<u>Title</u>	<u>Frequency</u>
M22A	Woven Fabrics--Production, Inventories, and Unfilled Orders	Monthly
M22D	Consumption on the Woolen and Worsted Systems	Monthly
M22P	Cotton, Manmade Fiber Staple, and Linters--Consumption, Stocks, and Spindle Activity	Monthly

MQ-22K	Shipments of Knit Cloth, Including Interplant Transfers	Quarterly
MA-22F	Yarn Production	Annual
MA-22G	Narrow Fabrics	Annual
MA-22S	Broadwoven Fabrics Finished	Annual
MA-22T.5	Nonwoven Fabrics	Annual
MA-23X	Sheets, Pillowcases, and Towels	Annual

## SPECIAL TEXTILE REPORTS

At intervals of a few years, special supplemental reports on broadwoven fabrics are also published. Recent reports of this type are:

<u>Series</u>	<u>Title</u>	<u>Period Covered</u>
M22T Supp.	Broadwoven Fabrics--Blends and Mixtures	1965
M22T.1 Supp.	Broadwoven Fabrics, Average Weight and Width of Fabric (Cotton, Manmade Fiber, and Wool Fabrics)	First Quarter 1968
M22T-1 Supp.	Broad Fabric Weaving Looms in Place by Type and Width	1964

## EXPLANATION OF TERMS

Cotton Fabrics--Wholly or chiefly by weight of cotton.

### Blends and Mixtures

Fabrics made from more than one fiber are classified in the same way as other fabrics, i.e., according to whether the fabric is chiefly cotton, wool, or manmade fiber. As examples, a fabric which is 55 percent cotton and 45 percent rayon is classified in the cotton section; a fabric which is 40 percent cotton, 30 percent rayon, and 30 percent acetate is classified in the manmade fibers section.

Blends and mixtures which are by weight 50 percent of one fiber and 10 percent of another fiber are classified according to the fiber of

Current Industrial Reports Series MQ-22T.1(70)

greatest value. As an example, a fabric which is 50 percent polyester and 50 percent cotton is classified as polyester.

Fabrics which are 95 percent or more of one fiber are not considered blends. Such fabrics are included in the 100 percent classification for that fiber.

#### Units of Quantity

Production is reported in thousands of linear yards except as follows:

Blanketing--In thousands of linear yards, 72 inch width or equivalent.

Selected items in thousands of pounds as noted.

Production--Represents total production of cotton fabrics by all known weaving mills regardless of their primary activity.

Looms Operating--Represents number of looms operating on the specific fabrics at end of quarter.

Yarns Consumed Loom Hours, and Stocks of Selected Filament Yarns--Represents data for all mills primarily producing cotton broadwoven fabrics.

MILL CLASSIFICATION - Mills are classified according to the major type of fabric produced. However, this classification is not made on a quarterly basis. For 1967, particular mills whose primary activity had become the weaving of man-made fiber fabrics rather than cotton were given revised mill classifications. Consequently, data on loom hours, yarn consumption, and stocks shown in tables 3, 4, and 5 are not comparable with information shown for 1966 and prior years. An overlap between the old and new mill assignment is not available. It should be noted, however, that the combination of data shown in this series (M22T.1) and the manmade fiber broadwoven goods series (M22T.2) for yarns consumed, loom hours, and stocks are comparable.

# CURRENT POPULATION REPORTS

## From the Bureau of the Census

### P-23 SPECIAL STUDIES.

Infrequent reports on methods, concepts, or specialized data.

### P-25 POPULATION ESTIMATES AND PROJECTIONS.

Monthly estimates of the total population of the United States; annual mid-year estimates of the population of States, by broad age groups, and of the United States by age, color, and sex; annual estimates of the components of population change. Estimates of the population selected metropolitan areas and their component counties. Projections of the future population of the United States and individual States. Approximately 20 reports each year.

### P-26 FEDERAL-STATE COOPERATIVE PROGRAM FOR POPULATION ESTIMATES.

Population estimates for counties for selected States in which the figures are prepared by a State agency as part of the Federal-State Cooperative Program for Local Population Estimates.

### P-20 POPULATION CHARACTERISTICS.

Current national and, in some cases, regional data on geographic residence and mobility, fertility, education, school enrollment, marital status, numbers and characteristics of household and families, etc. Approximately ten reports each year.

### P-27 FARM POPULATION.

(Census-ERS). Data on the size and selected characteristics of the farm population of the United States. Issued jointly with the Economic Research Service, U.S. Department of Agriculture. One or two reports each year.

### P-28 SPECIAL CENSUSES.

Results of population censuses taken at the request and expense of city or other local governments. Subscription includes only the quarterly and annual summaries showing the total population figures for all the censuses conducted during the particular period. Individual reports issued for areas of 50,000 or more, showing the population by age, sex, and color are available separately. See "How to Order Reports." Five reports each year.

### P-60 CONSUMER INCOME.

Information on the proportions of families and persons at various income levels. Also data on the relationship of income to age, sex, color, family size, education, occupation, work experience, and other characteristics. Two reports each year.

### P-65 CONSUMER BUYING INDICATORS.

Information on the proportion of households reporting intentions to purchase automobiles, houses, and household equipment within a particular period of time. Also data on recent purchases. Quarterly.

### HOW TO ORDER REPORTS

All Current Population Reports are sold as a single subscription for \$14.00 a year. This price includes Series P-20, P-23, P-25, P-26, P-27, P-28 (quarterly and annual summaries only), P-60, and P-65.

Subscriptions to individual series are not sold separately but single copies of reports issued in all series except P-28 may be obtained from Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402. Individual city or area reports in the P-28 series may be ordered from the Bureau of the Census. Prices for these reports vary. For information on titles and prices of individual reports issued in all CPR series, write to Publications Distribution Section, Bureau of the Census, Washington, D.C. 20233.

Mail order form with payment to:  
Superintendent of Documents  
U.S. Government Printing Office  
Washington, D.C., 20402  
or any U.S. Dept. of Commerce Field Office

Please send \_\_\_\_\_ subscription(s) of the Current Population Report Series as described above, at \$14.00 per subscription. (8 Series). Add \$3.50 for foreign mailing. C3.186: (Nos.)

Enclosed is \$ \_\_\_\_\_ (check, money order, Supt. Docs. coupons) or charge Deposit Account No. \_\_\_\_\_

# CURRENT INDUSTRIAL REPORTS

## Cotton Broadwoven Gray Goods Fourth Quarter 1970

U.S. DEPARTMENT OF COMMERCE / Bureau of the Census

FOR RELEASE: April 1, 1971

SERIES: MQ-22T.1(70)-4

The statistics in this publication are based on a survey of manufacturers and represent the entire U.S. production of cotton broadwoven gray fabrics over 12 inches in width. Estimates are included for companies whose reports were not received in time for tabulation. A more complete description of the survey appears on pages 8 and 9.

Table 1. Summary of Production, by Class of Fabric: 1964 to 1970

(Millions of linear yards)

## DESCRIPTION OF SURVEY

The statistics in this publication and in the other MQ-22T reports were collected on Census Form MQ-22T, Broad Fabrics (Except Knit): Woven, Nonwoven, and Felts from a panel of approximately 650 producers who account for about 95 percent of the total production. Estimates are included in the published figures for an additional 150 small producers reporting annually.

The current quarter's figures may also include estimates for respondents whose reports were not received in time for tabulation. Such missing figures are imputed from the quarter-to-quarter movements shown by reporting firms and are generally limited to a maximum of 10 percent to any one item. Individual items with higher imputation rates are footnoted.

The imputation rate is not an explicit indicator of the potential error in published figures due to nonresponse, because the actual quarterly movements for nonrespondents may or may not closely agree with the imputed movements. The probable range of difference between the actual and imputed figures is unknown. The degree of uncertainty regarding the accuracy of the data, however, increases as the percentage of imputation increases. Figures with high imputation rates, therefore, should be used with caution.

Statistics for previous quarters may be revised, due to receipt of corrected data from respondents, including late reports for which estimates were made, and other corrections. Figures which were revised significantly are indicated by footnotes.

The data in this report are not adjusted for seasonal variation or number of working days.

## RELATED REPORTS

The following is a list of selected current and recent special textile reports published by the Census Bureau in the Current Industrial Reports series:

<u>Series No.</u>	<u>Title</u>	<u>Frequency</u>
M22A	Woven Fabrics--Production, Inventories, and Unfilled Orders	Monthly
M22D	Consumption on the Woolen and Worsted Systems	Monthly
M22P	Cotton, Manmade Fiber Staple, and Linters--Consumption, Stocks, and Spindle Activity	Monthly

MQ-22K	Shipments of Knit Cloth, Including Interplant Transfers	Quarterly
MA-22F	Yarn Production	Annual
MA-22G	Narrow Fabrics	Annual
MA-22S	Broadwoven Fabrics Finished	Annual
MA-22T.5	Nonwoven Fabrics	Annual
MA-23X	Sheets, Pillowcases, and Towels	Annual

## SPECIAL TEXTILE REPORTS

At intervals of a few years, special supplemental reports on broadwoven fabrics are also published. Recent reports of this type are:

<u>Series</u>	<u>Title</u>	<u>Period Covered</u>
M22T Supp.	Broadwoven Fabrics--Blends and Mixtures	1965
M22T.1 Supp.	Broadwoven Fabrics, Average Weight and Width of Fabric (Cotton, Manmade Fiber, and Wool Fabrics)	First Quarter 1968
M22T-1 Supp.	Broad Fabric Weaving Looms in Place by Type and Width	1964

## EXPLANATION OF TERMS

Cotton Fabrics--Wholly or chiefly by weight of cotton.

### Blends and Mixtures

Fabrics made from more than one fiber are classified in the same way as other fabrics, i.e., according to whether the fabric is chiefly cotton, wool, or manmade fiber. As examples, a fabric which is 55 percent cotton and 45 percent rayon is classified in the cotton section; a fabric which is 40 percent cotton, 30 percent rayon, and 30 percent acetate is classified in the manmade fibers section.

Blends and mixtures which are by weight 50 percent of one fiber and 10 percent of another fiber are classified according to the fiber of

Current Industrial Reports Series MQ-22T.1(70)

greatest value. As an example, a fabric which is 50 percent polyester and 50 percent cotton is classified as polyester.

Fabrics which are 95 percent or more of one fiber are not considered blends. Such fabrics are included in the 100 percent classification for that fiber.

#### Units of Quantity

Production is reported in thousands of linear yards except as follows:

Blanketing--In thousands of linear yards, 72 inch width or equivalent.

Selected items in thousands of pounds as noted.

Production--Represents total production of cotton fabrics by all known weaving mills regardless of their primary activity.

Looms Operating--Represents number of looms operating on the specific fabrics at end of quarter.

Yarns Consumed Loom Hours, and Stocks of Selected Filament Yarns--Represents data for all mills primarily producing cotton broadwoven fabrics.

MILL CLASSIFICATION - Mills are classified according to the major type of fabric produced. However, this classification is not made on a quarterly basis. For 1967, particular mills whose primary activity had become the weaving of man-made fiber fabrics rather than cotton were given revised mill classifications. Consequently, data on loom hours, yarn consumption, and stocks shown in tables 3, 4, and 5 are not comparable with information shown for 1966 and prior years. An overlap between the old and new mill assignment is not available. It should be noted, however, that the combination of data shown in this series (M22T.1) and the manmade fiber broadwoven goods series (M22T.2) for yarns consumed, loom hours, and stocks are comparable.

# CURRENT POPULATION REPORTS

In addition to the findings of the Census of Population, conducted every ten years, the Bureau of the Census publishes continuing and up-to-date statistics on population counts, characteristics, and other special studies on the American people. Data are issued in the eight separate series of reports described herein and released under the general title, Current Population Reports.

## P-20 POPULATION CHARACTERISTICS.

Current national and, in some cases, regional data on geographic residence and mobility, fertility, education, school enrollment, marital status, numbers and characteristics of household and families, etc. Approximately ten reports each year.

## P-23 SPECIAL STUDIES.

Infrequent reports on methods, concepts, or specialized data.

## P-25 POPULATION ESTIMATES AND PROJECTIONS.

Monthly estimates of the total population of the United States; annual mid-year estimates of the population of States, by broad age groups, and of the United States by age, color, and sex; annual estimates of the components of population change. Estimates of the population selected metropolitan areas and their component counties. Projections of the future population of the United States and individual States. Approximately 20 reports each year.

## P-26 FEDERAL-STATE COOPERATIVE PROGRAM FOR POPULATION ESTIMATES.

Population estimates for counties for selected States in which the figures are prepared by a State agency as part of the Federal-State Cooperative Program for Local Population Estimates.

## P-27 FARM POPULATION.

(Census-ERS). Data on the size and selected characteristics of the farm population of the United States. Issued jointly with the Economic Research Service, U.S. Department of Agriculture. One or two reports each year.

## P-28 SPECIAL CENSUSES.

Results of population censuses taken at the request and expense of city or other local governments. Subscription includes only the quarterly and annual summaries showing the total population figures for all the censuses conducted during the particular period. Individual reports issued for areas of 50,000 or more, showing the population by age, sex, and color are available separately. See "How to Order Reports." Five reports each year.

## P-60 CONSUMER INCOME.

Information on the proportions of families and persons at various income levels. Also data on the relationship of income to age, sex, color, family size, education, occupation, work experience, and other characteristics. Two reports each year.

## P-65 CONSUMER BUYING INDICATORS.

Information on the proportion of households reporting intentions to purchase automobiles, houses, and household equipment within a particular period of time. Also data on recent purchases. Quarterly.

## HOW TO ORDER REPORTS

All Current Population Reports are sold as a single subscription for \$14.00 a year. This price includes Series P-20, P-23, P-25, P-26, P-27, P-28 (quarterly and annual summaries only), P-60, and P-65.

Subscriptions to individual series are not sold separately but single copies of reports issued in all series except P-28 may be obtained from Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402. Individual city or area reports in the P-28 series may be ordered from the Bureau of the Census. Prices for these reports vary. For information on titles and prices of individual reports issued in all CPR series, write to Publications Distribution Section, Bureau of the Census, Washington, D.C. 20233.

## Broadwoven Goods

### Summary of Looms in Place

#### December 31, 1970

U.S. DEPARTMENT OF COMMERCE / Bureau of the Census

November 1971

SERIES: MQ-22T(70) Supplement

The data shown in this report summarizes the information published in the quarterly MQ-22T series. No revisions have been made to data previously published.

Looms in place at broadwoven fabric mills at the end of 1970 totaled 362,558. Of the total number of looms in place, there were 352,984 in place at cotton and manmade fiber fabric mills, 7,257 in woolen and worsted mills and 2,317 at tire cord and tire fabric mills.

Coverage - Data are based on quarterly reports received on Census Form MQ-22T, Broad Fabrics (except knit): Woven, Nonwoven, and Felts. Estimates are included for respondents whose reports were not received in time for tabulation.

Beginning with first quarter 1969, these data, by type of mill, have been published separately on a quarterly basis in each of the Current Industrial Report Series MQ-22T (Cotton, Manmade, Wool, and Tire Cord).

LOOMS IN PLACE AT BROADWOVEN FABRIC MILLS, END OF 1970 AND 1969

Type of loom	Number in place, by type of mill <sup>1</sup>

- Represents zero.

<sup>1</sup>Mill classification is determined by the primary type of fabric produced by the establishment. This assignment is based on their output in 1967.

Inquiries concerning these figures should be addressed to the U.S. Department of Commerce, Bureau of the Census, Industry Division, Washington, D.C. 20233. This publication is for sale by the Bureau of the Census, Price: 25 cents per copy.

## CURRENT INDUSTRIAL REPORTS

## Cotton Broadwoven Gray Goods

## Summary for 1970

U.S. DEPARTMENT OF COMMERCE / Bureau of the Census

FOR RELEASE: September 29, 1971

DEC 17 1971  
DEPOSITORY

SERIES: MQ-22T.1(70)-5

The data shown in this report summarize the information published in the quarterly MQ-22T.1 series. Any revisions made to quarterly data previously published in this series are so noted.

## DESCRIPTION OF SURVEY

The statistics in this publication were published in Census quarterly series MQ-22T.1 Cotton Broadwoven Gray Goods, from a sample of mills accounting for approximately 98 percent of the total U.S. production of cotton broadwoven goods. Estimates have been included for manufacturers whose reports were not received and are based on their production as reported in the 1969 annual survey.

The data in this report are not adjusted for seasonal variation or number of working days.

## COVERAGE

The information contained in this report is collected on Census quarterly form MQ-22T, "Broad Fabrics (Except Knit): Woven, Nonwoven, and Felts." A separate report is requested from each mill, although in some instances the "mill" reported as one unit to the Census Bureau constitutes more than one location.

Fabrics woven on commission are reported in this series by the commission mill, not by the company for which the mill is contracted.

## COVERAGE OF INDIVIDUAL TABLES

The production figures shown in tables 1 and 2 represent total production of the specified

fabrics by all weaving mills regardless of their primary activity. However, because a single report is collected from an individual mill, the information shown in tables 3, 4, 5, and 6 relates to the entire activity of all mills primarily producing cotton fabrics. Insofar as these mills produced other fabrics (manmade fiber or wool) as a secondary project, the yarn consumption or loom activity for such fabrics would be included in this report. Similarly, the yarns consumed in the manufacture of cotton fabrics produced as a secondary product in a mill primarily producing manmade fiber fabrics is excluded from this report and included in the Current Industrial Reports publication relating to manmade fiber broadwoven fabrics.

## WOOLEN AND WORSTED MILLS

Mills with woollen and worsted machinery which primarily produce manmade fiber fabrics do not report yarn consumption data. Separate data on knit cloth are published by the Bureau of the Census in quarterly series MQ-22K, Shipments of Knit Cloth, including Interplant Transfers, beginning with the fourth quarter 1966. Data are available upon request.

## DEFINITION OF TERMS

Broad Fabrics--Fabric over 12" in width, as made.

Cotton Fabrics--Includes fabric wholly or chiefly by weight of cotton.

Blends, Chiefly Cotton--Includes fabrics chiefly by weight of cotton and containing other fibers, such as nylon, polyester, etc.

Blends and Mixtures--Fabrics which are made from more than one fiber are classified according to whether the fabric is chiefly cotton, wool, or manmade fiber. As examples, a fabric made of 55 percent cotton and 45 percent rayon is included in the cotton report; a fabric which is 40 percent cotton, 30 percent rayon, and 30 percent acetate is classified in the manmade fibers report. Blends and mixtures which are by weight 50 percent of one fiber and 50 percent of another fiber are classified according to the fiber of greatest value. As an example, a fabric which is 50 percent polyester and 50 percent cotton is classified as polyester. Fabrics which are 95 percent or more of one fiber are included in the 100 percent classification for that fiber.

Series	Title	Period Covered
MQ-22T Supp.	Broadwoven Fabrics-- Blends and Mixtures	1965
MQ-22T.1	Broadwoven Fabrics, Average Weight and Width of Fabric (Cotton, Manmade Fiber, and Wool Fabrics)	First Quarter 1968
MQ-22T.1 Supp.	Broad Fabric Weaving Looms in Place by Type and Width	1964

### ACKNOWLEDGMENTS

This report was prepared in the Industry Division, Bureau of the Census, under the direction of Robert J. Nealon, Chief, Foods, Textiles, and Apparel. Charles T. Lee was directly responsible for the review of the data and preparation of the report. Owen C. Gretton, Chief of the Division, and Elmer S. Biles, Assistant Chief, provided overall direction and coordination to this project.

### SPECIAL TEXTILE REPORTS

At intervals of a few years, special supplemental reports on broadwoven fabrics are also published. Recent reports of this type are:

Table 1. SUMMARY OF PRODUCTION, BY CLASS OF FABRIC: 1960 TO 1970

MQ-22T/MPP

## Broadwoven Gray Fabric Production

### Seasonal Adjustment Supplement

1950 to 1970

U.S. DEPARTMENT OF COMMERCE / Bureau of the Census

Boston Public Library  
Superintendent of Documents

FOR RELEASE: June 18, 1971

AUG 6 1971

SERIES: MQ-22T Supplement

### DEPOSITORY

Beginning with the second quarter 1971 publication, adjusted data will be included in each of the regular MQ-22T reports. These reports also include a detailed description of the survey, including a discussion of the scope and coverage of the report together with an explanation of the terms.

### BRIEF DEFINITIONS OF MEASURES SHOWN IN TABLE 4

The following are brief definitions; more complete explanations appear in Electronic Computers and Business Indicators, by Julius Shiskin, issued as Occasional Paper 57 by the National Bureau of Economic Research, 1957 (reprinted from Journal of Business, October 1957).

"CI" is the average quarter-to-quarter percentage change, without regard to sign, in the seasonally adjusted series (i.e., the series after adjustment for measurable seasonal, trading-day, and holiday variations).

"I" is the same for the irregular component, obtained by dividing the cyclical component into the seasonally adjusted series.

"C" is the same for the cyclical component, a smooth, flexible moving average of the seasonally adjusted series.

"I/C" is a measure of the relative smoothness (small values) or irregularity (large values) of the seasonally adjusted series.

This report presents seasonally adjusted data for a number of the product class aggregates published quarterly in Current Industrial Reports Series MQ-22T, Broadwoven Fabrics. The seasonal adjustment program largely eliminates the effect of normal seasonal variations (including variations due to vacations, weather, etc.) as measured over the time period for which data were used. The resulting information thus provides a better measure than the original data of the quarter-to-quarter variations which are due to factors that are not associated with a repetitive seasonal pattern.

The seasonal adjustments were made using the X-11Q variant of the Census Bureau's seasonal adjustment program. This program is amply described in the literature on this method.<sup>1</sup>

For each series included in this report the following tables are shown:

- (1) Seasonally-adjusted data
- (2) Data without seasonal adjustment (original series)
- (3) Seasonal adjustment factors. The seasonally-adjusted data are obtained by dividing the unadjusted data by the seasonal factors for the specific month
- (4) Average percentage changes and related measures for each series.

<sup>1</sup>Electronic Computers and Business Indicators, National Bureau of Economic Research Occasional Paper 57 (New York, 1957); Tests and Revisions of Bureau of the Census Methods of Seasonal Adjustments, Bureau of the Census Technical Paper No. 5 (Washington, 1961, \$1.00); The X-11 Variant of the Census Method 11 Seasonal Adjustment Program, Bureau of the Census Technical Paper No. 15 (Washington, 1967, \$0.50).

"QCD" (quarters for cyclical dominance) provides an estimate of the appropriate time span over which to observe cyclical movements in a quarterly series. It is small for smooth series and large for irregular series.

"Average Duration of Run" (ADR) is another measure of smoothness and is equal to the average

number of consecutive quarterly changes in the same direction in any series of observations. The ADR is shown for the seasonally adjusted series  $CI$ , irregular component  $I$ , cyclical component  $C$ , and the QCD curve. The QCD curve is an unweighted moving average (with the number of terms equal to QCD) of the seasonally adjusted series.

CURRENT INDUSTRIAL REPORTS

# Cotton Broadwoven Gray Goods

First Quarter 1971

U.S. DEPARTMENT OF COMMERCE / Bureau of the Census

Superintendent of Documents

FOR RELEASE: June 23, 1971

AUG 6 1971

SERIES: MQ-22T.1(71)-1

The statistics in this publication are based on a survey of manufacturers and represent the entire U.S. production of cotton broadwoven gray fabrics over 12 inches in width. Estimates are included for companies whose reports were not received in time for tabulation. A more complete description of the survey appears on pages 8 and 9.

## DESCRIPTION OF SURVEY

The statistics in this publication and in the other MQ-22T reports were collected on Census Form MQ-22T, Broad Fabrics (Except Knit): Woven, Nonwoven, and Felts from a panel of approximately 650 producers who account for about 95 percent of the total production. Estimates are included in the published figures for an additional 150 small producers reporting annually.

The current quarter's figures may also include estimates for respondents whose reports were not received in time for tabulation. Such missing figures are imputed from the quarter-to-quarter movements shown by reporting firms and are generally limited to a maximum of 10 percent to any one item. Individual items with higher imputation rates are footnoted.

The imputation rate is not an explicit indicator of the potential error in published figures due to nonresponse, because the actual quarterly movements for nonrespondents may or may not closely agree with the imputed movements. The probable range of difference between the actual and imputed figures is unknown. The degree of uncertainty regarding the accuracy of the data, however, increases as the percentage of imputation increases. Figures with high imputation rates, therefore, should be used with caution.

Statistics for previous quarters may be revised, due to receipt of corrected data from respondents, including late reports for which estimates were made, and other corrections. Figures which were revised significantly are indicated by footnotes.

The data in this report are not adjusted for seasonal variation or number of working days.

## RELATED REPORTS

The following is a list of selected current and recent special textile reports published by the Census Bureau in the Current Industrial Reports series:

<u>Series No.</u>	<u>Title</u>	<u>Frequency</u>
M22A	Woven Fabrics--Production, Inventories, and Unfilled Orders	Monthly
M22D	Consumption on the Woolen and Worsted Systems	Monthly
M22P	Cotton, Manmade Fiber Staple, and Interiors--Consumption, Stocks, and Spindle Activity	Monthly

MQ-22K	Shipments of Knit Cloth, Including Interplant Transfers	Quarterly
MA-22F	Yarn Production	Annual
MA-22G	Narrow Fabrics	Annual
MA-22S	Broadwoven Fabrics Finished	Annual
MA-22T.5	Nonwoven Fabrics	Annual
MA-23X	Sheets, Pillowcases, and Towels	Annual

## SPECIAL TEXTILE REPORTS

At intervals of a few years, special supplemental reports on broadwoven fabrics are also published. Recent reports of this type are:

<u>Series</u>	<u>Title</u>	<u>Period Covered</u>
M22T Supp.	Broadwoven Fabrics--Blends and Mixtures	1965
M22T.1 Supp.	Broadwoven Fabrics, Average Weight and Width of Fabric (Cotton, Manmade Fiber, and Wool Fabrics)	First Quarter 1968
M22T-1 Supp.	Broad Fabric Weaving Looms in Place by Type and Width	1964

## EXPLANATION OF TERMS

Cotton Fabrics--Wholly or chiefly by weight of cotton.

### Blends and Mixtures

Fabrics made from more than one fiber are classified in the same way as other fabrics, i.e., according to whether the fabric is chiefly cotton, wool, or manmade fiber. As examples, a fabric which is 55 percent cotton and 45 percent rayon is classified in the cotton section; a fabric which is 40 percent cotton, 30 percent rayon, and 30 percent acetate is classified in the manmade fibers section.

Blends and mixtures which are by weight 50 percent of one fiber and 10 percent of another fiber are classified according to the fiber of

Current Industrial Reports Series MQ-22T.1(71)

greatest value. As an example, a fabric which is 50 percent polyester and 50 percent cotton is classified as polyester.

Fabrics which are 95 percent or more of one fiber are not considered blends. Such fabrics are included in the 100 percent classification for that fiber.

#### Units of Quantity

Production is reported in thousands of linear yards except as follows:

Blanketing--In thousands of linear yards, 72 inch width or equivalent.

Selected items in thousands of pounds as noted.

Production--Represents total production of cotton fabrics by all known weaving mills regardless of their primary activity.

Looms Operating--Represents number of looms operating on the specific fabrics at end of quarter.

Yarns Consumed Loom Hours, and Stocks of Selected Filament Yarns--Represents data for all mills primarily producing cotton broadwoven fabrics.

MILL CLASSIFICATION - Mills are classified according to the major type of fabric produced. However, this classification is not made on a quarterly basis. For 1967, particular mills whose primary activity had become the weaving of manmade fiber fabrics rather than cotton were given revised mill classifications. Consequently, data on loom hours, yarn consumption, and stocks shown in tables 3, 4, and 5 are not comparable with information shown for 1966 and prior years. An overlap between the old and new mill assignment is not available. It should be noted, however, that the combination of data shown in this series (M22T.1) and the manmade fiber broadwoven goods series (M22T.2) for yarns consumed, loom hours, and stocks are comparable.

1971 edition Statistical Classification of Domestic and Foreign  
Commodities Exported from the United States

# schedule B

## The Bureau of the Census Offers. . .

a new and improved edition of Schedule B,  
Statistical Classification of Domestic and Foreign  
Commodities Exported from the United  
States. Shown in this 1971 edition are current  
Schedule B commodity classification code numbers  
required on Shipper's Export Declarations.

Numerous improvements over the 1965 Schedule B are included in this new issue by the addition, deletion, and revision of headnotes, directives, and inclusion item listings, and by the rewording of commodity descriptions. These changes facilitate the use of Schedule B, largely through clarification of the coverage of individual Schedule B numbers...however, the basic outline and arrangement of the 1971 Schedule is the same used in the 1965 edition. The new '71 edition also contains revised procedures for reporting quantities on the Shipper's Export Declarations for those Schedule B numbers requiring the quantity to be shown in two units.

Another innovation in the 1971 Schedule B is an updated and improved alphabetical commodity index expanded to cover a larger number of individual items. Also - the basic format of the index is revised to show the first five digits of the seven digit commodity number for each indexed item, rather than showing a page number for each indexed item.

You may order your 1971 edition of Schedule B from the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402 (fill out order form below); from the local Collector of Customs; or from any U.S. Department of Commerce Field Office.

528 pp. \$10.50 (\$2.75 additional for foreign mailing). This price includes supplemental changes issued irregularly for an indefinite period.

## CURRENT INDUSTRIAL REPORTS

Cotton Broadwoven Gray Goods  
Second Quarter 1971

U.S. DEPARTMENT OF COMMERCE / Bureau of the Census

FOR RELEASE: September 21, 1971

SERIES: MO-22T.1(71)-2Y

The statistics in this publication are based on a survey of manufacturers and represent the entire U.S. production of cotton broadwoven gray fabrics over 12 inches in width. Estimates are included for companies whose reports were not received in time for tabulation. A more complete description of the survey appears on pages 8 and 9.

Table 1. Summary of Production, by Class of Fabric: 1965 to 1971

(Millions of linear yards)

Quarter and year	Cotton broadwoven gray goods, total	Duck and allied fabrics	Sheeting and allied coarse and medium yarn fabrics	Print cloth yarn fabrics	Carded colored yarn fabrics	Towels, towelings, and dishcloths	Napped fabrics, blankets, and blanketing	Fine cotton fabrics	Woven cotton fabrics and specialties

## DESCRIPTION OF SURVEY

The statistics in this publication and in the other MQ-22T reports were collected on Census Form MQ-22T, Broad Fabrics (Except Knit): Woven, Nonwoven, and Felts from a panel of approximately 650 producers who account for about 95 percent of the total production. Estimates are included in the published figures for an additional 150 small producers reporting annually.

The current quarter's figures may also include estimates for respondents whose reports were not received in time for tabulation. Such missing figures are imputed from the quarter-to-quarter movements shown by reporting firms and are generally limited to a maximum of 10 percent to any one item. Individual items with higher imputation rates are footnoted.

The imputation rate is not an explicit indicator of the potential error in published figures due to nonresponse, because the actual quarterly movements for nonrespondents may or may not closely agree with the imputed movements. The probable range of difference between the actual and imputed figures is unknown. The degree of uncertainty regarding the accuracy of the data, however, increases as the percentage of imputation increases. Figures with high imputation rates, therefore, should be used with caution.

Statistics for previous quarters may be revised, due to receipt of corrected data from respondents, including late reports for which estimates were made, and other corrections. Figures which were revised significantly are indicated by footnotes.

The data in this report are not adjusted for seasonal variation or number of working days.

## RELATED REPORTS

The following is a list of selected current and recent special textile reports published by the Census Bureau in the Current Industrial Reports series:

Series No.	Title	Frequency
M22A	Woven Fabrics--Production, Inventories, and Unfilled Orders	Monthly
M22D	Consumption on the Woolen and Worsted Systems	Monthly

## SPECIAL TEXTILE REPORTS

At intervals of a few years, special supplemental reports on broadwoven fabrics are also published. Recent reports of this type are:

Series	Title	Period Covered
M22T Supp.	Broadwoven Fabrics--Blends and Mixtures	1965
M22T.1 Supp.	Broadwoven Fabrics, Average Weight and Width of Fabric (Cotton, Manmade Fiber, and Wool Fabrics)	First Quarter 1968
M22T-1 Supp.	Broad Fabric Weaving Looms in Place by Type and Width	1964

## EXPLANATION OF TERMS

Cotton Fabrics--Wholly or chiefly by weight of cotton.

Blends and Mixtures

Fabrics made from more than one fiber are classified in the same way as other fabrics, i.e., according to whether the fabric is chiefly cotton, wool, or manmade fiber. As examples, a fabric which is 55 percent cotton and 45 percent rayon is classified in the cotton section; a fabric which is 40 percent cotton, 30 percent rayon, and 30 percent acetate is classified in the manmade fibers section.

Blends and mixtures which are by weight 50 percent of one fiber and 10 percent of another fiber are classified according to the fiber of

Current Industrial Reports Series MQ-22T.1(71)

greatest value. As an example, a fabric which is 50 percent polyester and 50 percent cotton is classified as polyester.

Fabrics which are 95 percent or more of one fiber are not considered blends. Such fabrics are included in the 100 percent classification for that fiber.

#### Units of Quantity

Production is reported in thousands of linear yards except as follows:

Blanketing--In thousands of linear yards, 72 inch width or equivalent.

Selected items in thousands of pounds as noted.

Production--Represents total production of cotton fabrics by all known weaving mills regardless of their primary activity.

Looms Operating--Represents number of looms operating on the specific fabrics at end of quarter.

Yarns Consumed Loom Hours, and Stocks of Selected Filament Yarns--Represents data for all mills primarily producing cotton broadwoven fabrics.

MILL CLASSIFICATION - Mills are classified according to the major type of fabric produced. However, this classification is not made on a quarterly basis. For 1967, particular mills whose primary activity had become the weaving of man-made fiber fabrics rather than cotton were given revised mill classifications. Consequently, data on loom hours, yarn consumption, and stocks shown in tables 3, 4, and 5 are not comparable with information shown for 1966 and prior years. An overlap between the old and new mill assignment is not available. It should be noted, however, that the combination of data shown in this series (M22T.1) and the manmade fiber broadwoven goods series (M22T.2) for yarns consumed, loom hours, and stocks are comparable.

# Advance knowledge of what's coming 1972-1980

is yours with the **U.S. INDUSTRIAL OUTLOOK**  
and **The Economy At Midyear, 1971**

With your own personal copies you will quickly see where business is headed, where your industry—and your own personal business situation—stands in relation to the nation's economy.

These timely forecasts pinpoint prospects for over 200 specific industries. Each industry chapter brings you just the data you need for long-range planning—a narrative review of activity in '70 with dependable forecasts for '75 and '80 projected by experienced Commerce Department industry specialists.

Yes, before you make your next business decision you'll want to read the authoritative U.S. Industrial Outlook, 1971, and The Economy at Midyear, 1971, with up-to-date statistics on—value of shipments . . . profits . . . number of firms . . . employment . . . imports/exports . . . prices . . . products . . . geographic concentration . . . innovations . . . pollution problems . . . new markets . . . financial data . . . R&D costs . . . and rates of investment.

## CURRENT INDUSTRIAL REPORTS

## Cotton Broadwoven Gray Goods

Third Quarter 1971

U.S. DEPARTMENT OF COMMERCE / Bureau of the Census

December 1971

SERIES: MQ-22T.1(71)-3

The statistics in this publication are based on a survey of manufacturers and represent the entire U.S. production of cotton broadwoven gray fabrics over 12 inches in width. Estimates are included for companies whose reports were not received in time for tabulation. A more complete description of the survey appears on pages 9 and 10.

## DESCRIPTION OF SURVEY

The statistics in this publication and in the other MQ-22T reports were collected on Census Form MQ-22T, Broad Fabrics (Except Knit): Woven, Nonwoven, and Felts from a panel of approximately 650 producers who account for about 95 percent of the total production. Estimates are included in the published figures for an additional 150 small producers reporting annually.

The current quarter's figures may also include estimates for respondents whose reports were not received in time for tabulation. Such missing figures are imputed from the quarter-to-quarter movements shown by reporting firms and are generally limited to a maximum of 10 percent to any one item. Individual items with higher imputation rates are footnoted.

The imputation rate is not an explicit indicator of the potential error in published figures due to nonresponse, because the actual quarterly movements for nonrespondents may or may not closely agree with the imputed movements. The probable range of difference between the actual and imputed figures is unknown. The degree of uncertainty regarding the accuracy of the data, however, increases as the percentage of imputation increases. Figures with high imputation rates, therefore, should be used with caution.

Statistics for previous quarters may be revised, due to receipt of corrected data from respondents, including late reports for which estimates were made, and other corrections. Figures which were revised significantly are indicated by footnotes.

The data in this report are not adjusted for number of working days.

## RELATED REPORTS

The following is a list of selected current and recent special textile reports published by the Census Bureau in the Current Industrial Reports series:

Series No.	Title	Frequency
M22A	Woven Fabrics--Production, Inventories, and Unfilled Orders	Monthly
M22D	Consumption on the Woolen and Worsted Systems	Monthly
M22P	Cotton, Manmade Fiber Staple, and Linters--Consumption, Stocks, and Spindle Activity	Monthly

MQ-22K	Shipments of Knit Cloth, Including Interplant Transfers	Quarterly
MA-22F	Yarn Production	Annual
MA-22G	Narrow Fabrics	Annual
MA-22S	Broadwoven Fabrics Finished	Annual
MA-22T.5	Nonwoven Fabrics	Annual
MA-23X	Sheets, Pillowcases, and Towels	Annual

## SPECIAL TEXTILE REPORTS

At intervals of a few years, special supplemental reports on broadwoven fabrics are also published. Recent reports of this type are:

Series	Title	Period Covered
M22T Supp.	Broadwoven Fabrics--Blends and Mixtures	1965
M22T.1 Supp.	Broadwoven Fabrics, Average Weight and Width of Fabric (Cotton, Manmade Fiber, and Wool Fabrics)	First Quarter 1968
M22T-1 Supp.	Broad Fabric Weaving Looms in Place by Type and Width	1964

## EXPLANATION OF TERMS

Cotton Fabrics--Wholly or chiefly by weight of cotton.

### Blends and Mixtures

Fabrics made from more than one fiber are classified in the same way as other fabrics, i.e., according to whether the fabric is chiefly cotton, wool, or manmade fiber. As examples, a fabric which is 55 percent cotton and 45 percent rayon is classified in the cotton section; a fabric which is 40 percent cotton, 30 percent rayon, and 30 percent acetate is classified in the manmade fibers section.

Blends and mixtures which are by weight 50 percent of one fiber and 10 percent of another fiber are classified according to the fiber of greatest value. As an example, a fabric which

is 50 percent polyester and 50 percent cotton is classified as polyester.

Fabrics which are 95 percent or more of one fiber are not considered blends. Such fabrics are included in the 100 percent classification for that fiber.

#### Units of Quantity

Production is reported in thousands of linear yards except is follows:

Blanketing--In thousands of linear yards, 72 inch width or equivalent.

Selected items in thousands of pounds as noted.

Production--Represents total production of cotton fabrics by all known weaving mills regardless of their primary activity.

Looms Operating--Represents number of looms operating on the specific fabrics at end of quarter.

Yarns Consumed Loom Hours, and Stocks of Selected Filament Yarns--Represents data for all mills primarily producing cotton broadwoven fabrics.

MILL CLASSIFICATION - Mills are classified according to the major type of fabric produced. However, this classification is not made on a quarterly basis. For 1967, particular mills whose primary activity had become the weaving of man-made fiber fabrics rather than cotton were given revised mill classifications. Consequently, data on loom hours, yarn consumption, and stocks shown in tables 3, 4, and 5 are not comparable with information shown for 1966 and prior years. An overlap between the old and new mill assignment is not available. It should be noted, however, that the combination of data shown in this series (M22T.1) and the manmade fiber broadwoven goods series (M22T.2) for yarns consumed, loom hours, and stocks are comparable.

#### **SEASONAL ADJUSTMENT**

This report presents seasonally adjusted data for a number of the most important series published quarterly in Current Industrial Reports Series MQ-22T.1, Cotton Broadwoven Gray Goods. The seasonal adjustment program largely eliminates the effect of normal seasonal variation (including variations due to vacations, weather, etc.) as measured over the time period for which data were used. The resulting information thus provides a better measure than the original data of the quarter-to-quarter variations which are due to factors that are not associated with a repetitive seasonal pattern.

# CURRENT POPULATION REPORTS

## From the Bureau of the Census

**P-23 SPECIAL STUDIES.**  
Infrequent reports on methods, concepts, or specialized data.

In addition to the findings of the Census of Population, conducted every ten years, the Bureau of the Census publishes continuing and up-to-date statistics on population counts, characteristics, and other special studies on the American people. Data are issued in the eight separate series of reports described herein and released under the general title, Current Population Reports.

### P-20 POPULATION CHARACTERISTICS.

Current national and, in some cases, regional data on geographic residence and mobility, fertility, education, school enrollment, marital status, numbers and characteristics of household and families, etc. Approximately ten reports each year.

### P-25 POPULATION ESTIMATES AND PROJECTIONS.

Monthly estimates of the total population of the United States; annual mid-year estimates of the population of States, by broad age groups, and of the United States by age, color, and sex; annual estimates of the components of population change. Estimates of the population selected metropolitan areas and their component counties. Projections of the future population of the United States and individual States. Approximately 20 reports each year.

### P-26 FEDERAL-STATE COOPERATIVE PROGRAM FOR POPULATION ESTIMATES.

Population estimates for counties for selected States in which the figures are prepared by a State agency as part of the Federal-State Cooperative Program for Local Population Estimates.

**P-27 FARM POPULATION.**  
(Census-ERS). Data on the size and selected characteristics of the farm population of the United States. Issued jointly with the Economic Research Service, U.S. Department of Agriculture. One or two reports each year.

**P-28 SPECIAL CENSUSES.**  
Results of population censuses taken at the request and expense of city or other local governments. Subscription includes only the quarterly and annual summaries showing the total population figures for all the censuses conducted during the particular period. Individual reports issued for areas of 50,000 or more, showing the population by age, sex, and color are available separately. See "How to Order Reports." Five reports each year.

### P-60 CONSUMER INCOME.

Information on the proportions of families and persons at various income levels. Also data on the relationship of income to age, sex, color, family size, education, occupation, work experience, and other characteristics. Two reports each year.

**P-65 CONSUMER BUYING INDICATORS.**  
Information on the proportion of households reporting intentions to purchase automobiles, houses, and household equipment within a particular period of time. Also data on recent purchases. Quarterly.

### HOW TO ORDER REPORTS

All Current Population Reports are sold as a single subscription for \$14.00 a year. This price includes Series P-20, P-23, P-25, P-26, P-27, P-28 (quarterly and annual summaries only), P-60, and P-65.

Subscriptions to individual series are not sold separately but single copies of reports issued in all series except P-28 may be obtained from Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402. Individual city or area reports in the P-28 series may be ordered from the Bureau of the Census. Prices for these reports vary. For information on titles and prices of individual reports issued in all CPR series, write to Publications Distribution Section, Bureau of the Census, Washington, D.C. 20233.

## CURRENT POPULATION REPORTS

Mail order form with payment to:  
Superintendent of Documents  
U.S. Government Printing Office  
Washington, D.C., 20402  
or any U.S. Dept. of Commerce Field Office

Please send \_\_\_\_\_ subscription(s) of the **Current Population Report Series** as described above, at \$14.00 per subscription. (8 Series). Add \$3.50 for foreign mailing. C3.186: (Nos.)

Enclosed is \$ \_\_\_\_\_ (check, money order, Supt. Docs. coupons) or charge Deposit Account No. \_\_\_\_\_

## CURRENT INDUSTRIAL REPORTS

## Cotton Broadwoven Gray Goods

Fourth Quarter 1971

U. S. DEPARTMENT OF COMMERCE • Social and Economic Statistics Administration • BUREAU OF THE CENSUS

March 1972

SERIES: MQ-22T.1(71)-4

The statistics in this publication are based on a survey of manufacturers and represent the entire U.S. production of cotton broadwoven gray fabrics over 12 inches in width. Estimates are included for companies whose reports were not received in time for tabulation. A more complete description of the survey appears on pages 9 and 10.

Table 1A.—Summary of Seasonally Adjusted Production Data, by Class of Fabric:  
1966 to 1971

## DESCRIPTION OF SURVEY

The statistics in this publication and in the other MQ-22T reports were collected on Census Form MQ-22T, Broad Fabrics (Except Knit): Woven, Nonwoven, and Felts, from a panel of approximately 650 producers who account for about 95 percent of the total production. Estimates are included in the published figures for an additional 150 small producers reporting annually.

The current quarter's figures may also include estimates for respondents whose reports were not received in time for tabulation. Such missing figures are imputed from the quarter-to-quarter movements shown by reporting firms and are generally limited to a maximum of 10 percent to any one item. Individual items with higher imputation rates are footnoted.

The imputation rate is not an explicit indicator of the potential error in published figures due to nonresponse, because the actual quarterly movements for nonrespondents may or may not closely agree with the imputed movements. The probable range of difference between the actual and imputed figures is unknown. The degree of uncertainty regarding the accuracy of the data, however, increases as the percentage of imputation increases. Figures with high imputation rates, therefore, should be used with caution.

Statistics for previous quarters may be revised, due to receipt of corrected data from respondents, including late reports for which estimates were made, and other corrections. Figures which were revised significantly are indicated by footnotes.

The data in this report are not adjusted for number of working days.

## RELATED REPORTS

The following is a list of selected current and recent special textile reports published by the Census Bureau in the Current Industrial Reports series:

Series No.	Title	Frequency
M22A	Woven Fabrics--Production, Inventories, and Unfilled Orders	Monthly
M22D	Consumption on the Woolen and Worsted Systems	Monthly
M22P	Cotton, Manmade Fiber Staple, and Linters--Consumption, Stocks, and Spindle Activity	Monthly

MQ-22K	Shipments of Knit Cloth, Including Interplant Transfers	Quarterly
MA-22F	Yarn Production	Annual
MA-22G	Narrow Fabrics	Annual
MA-22S	Broadwoven Fabrics Finished	Annual
MA-22T.5	Nonwoven Fabrics	Annual
MA-23X	Sheets, Pillowcases, and Towels	Annual

## SPECIAL TEXTILE REPORTS

At intervals of a few years, special supplemental reports on broadwoven fabrics are also published. Recent reports of this type are:

Series	Title	Period Covered
M22T Supp.	Broadwoven Fabrics--Blends and Mixtures	1965
M22T.1 Supp.	Broadwoven Fabrics, Average Weight and Width of Fabric (Cotton, Manmade Fiber, and Wool Fabrics)	First Quarter 1968
M22T-1 Supp.	Broad Fabric Weaving Looms in Place by Type and Width	1964

## EXPLANATION OF TERMS

Cotton Fabrics--Wholly or chiefly by weight of cotton.

### Blends and Mixtures

Fabrics made from more than one fiber are classified in the same way as other fabrics, i.e., according to whether the fabric is chiefly cotton, wool, or manmade fiber. As examples, a fabric which is 55 percent cotton and 45 percent rayon is classified in the cotton section; a fabric which is 40 percent cotton, 30 percent rayon, and 30 percent acetate is classified in the manmade fibers section.

Blends and mixtures which are by weight 50 percent of one fiber and 10 percent of another fiber are classified according to the fiber of greatest value. As an example, a fabric which

is 50 percent polyester and 50 percent cotton is classified as polyester.

Fabrics which are 95 percent or more of one fiber are not considered blends. Such fabrics are included in the 100 percent classification for that fiber.

#### Units of Quantity

Production is reported in thousands of linear yards except is follows:

Blanketing--In thousands of linear yards, 72 inch width or equivalent.

Selected items in thousands of pounds as noted.

Production--Represents total production of cotton fabrics by all known weaving mills regardless of their primary activity.

Looms Operating--Represents number of looms operating on the specific fabrics at end of quarter.

Yarns Consumed Loom Hours, and Stocks of Selected Filament Yarns--Represents data for all mills primarily producing cotton broadwoven fabrics.

MILL CLASSIFICATION - Mills are classified according to the major type of fabric produced. However, this classification is not made on a quarterly basis. For 1967, particular mills whose primary activity had become the weaving of man-made fiber fabrics rather than cotton were given revised mill classifications. Consequently, data on loom hours, yarn consumption, and stocks shown in tables 3, 4, and 5 are not comparable with information shown for 1966 and prior years. An overlap between the old and new mill assignment is not available. It should be noted, however, that the combination of data shown in this series (M22T.1) and the manmade fiber broadwoven goods series (M22T.2) for yarns consumed, loom hours, and stocks are comparable.

#### **SEASONAL ADJUSTMENT**

This report presents seasonally adjusted data for a number of the most important series published quarterly in Current Industrial Reports Series MQ-22T.1, Cotton Broadwoven Gray Goods. The seasonal adjustment program largely eliminates the effect of normal seasonal variation (including variations due to vacations, weather, etc.) as measured over the time period for which data were used. The resulting information thus provides a better measure than the original data of the quarter-to-quarter variations which are due to factors that are not associated with a repetitive seasonal pattern.

The Census Bureau presents

## The Statistical Abstract of the United States — 1971

The U.S. Department of Commerce, Bureau of the Census presents the **1971 STATISTICAL ABSTRACT OF THE UNITED STATES**. This 92d edition of the "Stat Abstract," as it is popularly known, offers the Nation's most sought-after facts and figures in the world of government and private enterprise. Statesmen...businessmen...scientists... teachers and students alike **FIND** the information they want on the social, economic, and governmental characteristics of the United States - both current and historical. Statistics are presented in over 1,300 tables and charts derived from over 200 government, private, and international agencies. A special introductory table features **RECENT TRENDS** for selected measures of social and economic change. The **GUIDE TO SOURCES** lists over 800 statistical publications on 50 major subjects, such as population (including data from the 1970 Census of Population and Housing), government, health, education, agriculture, industry, construction, recreation, trade, and scores of other subjects. Whatever your line of work, business, profession, or avocational interests - when you need the facts, choose the comprehensive and authoritative **STATISTICAL ABSTRACT OF THE UNITED STATES, 1971**.

## Summary of Looms in Place

December 31, 1971

U. S. DEPARTMENT OF COMMERCE • Social and Economic Statistics Administration • BUREAU OF THE CENSUS

October 1972

SERIES: MQ-22T(71) Supplement

The data shown in this report summarize the information published in the quarterly MQ-22T series. No revisions have been made to data previously published.

Looms in place at broadwoven fabric mills, at the end of 1971 totaled 343,022. Of the total number of looms in place, there were 335,177 in place at cotton and manmade fiber fabric mills 5,566 in woolen and worsted mills and 2,279 at tire cord and tire fabric mills.

Coverage - Data are based on quarterly reports received on Census Form MQ-22T, Broad Fabrics (except knit): Woven, Nonwoven, and Felts. Estimates are included for respondents whose reports were not received in time for tabulation.

Beginning with first quarter 1969, these data, by type of mill, have been published separately on a quarterly basis in each of the Current Industrial Report Series MQ-22T (Cotton, Manmade, Wool, and Tire Cord).

## LOOMS IN PLACE AT BROADWOVEN FABRIC MILLS, END OF 1971 AND 1970

- Represents zero.

<sup>1</sup>Mill classification is determined by the primary type of fabric produced by the establishment. This assignment is based on their output in 1967.

Inquiries concerning these figures should be addressed to the U.S. Department of Commerce, Bureau of the Census, Industry Division, Washington, D.C. 20233. This publication is for sale by the Bureau of the Census, Price: 25 cents per copy.

Supplement to U.S. Census Reports

DEC 11 1972

# CURRENT INDUSTRIAL REPORTS

## Cotton Broadwoven Gray Goods

Summary for 1971

U. S. DEPARTMENT OF COMMERCE • Social and Economic Statistics Administration • BUREAU OF THE CENSUS

September 1972

SERIES: MQ-22T.1(71)-5

The data shown in this report summarize the information published in the quarterly MQ-22T.1 series. Any revisions made to quarterly data previously published in this series are so noted.

### DESCRIPTION OF SURVEY

The statistics in this publication were published in Census quarterly series MQ-22T.1 Cotton Broadwoven Gray Goods, from a sample of mills accounting for approximately 98 percent of the total U.S. production of cotton broadwoven goods. Estimates have been included for manufacturers whose reports were not received and are based on their production as reported in the 1970 annual survey.

The data in this report are not adjusted for seasonal variation or number of working days.

### COVERAGE

The information contained in this report is collected on Census quarterly form MQ-22T, "Broad Fabrics (Except Knit): Woven, Nonwoven, and Felts." A separate report is requested from each mill, although in some instances the "mill" reported as one unit to the Census Bureau constitutes more than one location.

Fabrics woven on commission are reported in this series by the commission mill, not by the company for which the work is contracted.

### COVERAGE OF INDIVIDUAL TABLES

The production figures shown in tables 1 and 2 represent total production of the specified

fabrics by all weaving mills regardless of their primary activity. However, because a single report is collected from an individual mill, the information shown in tables 3, 4, 5, and 6 relates to the entire activity of all mills primarily producing cotton fabrics. Insofar as these mills produced other fabrics (manmade fiber or wool) as a secondary project, the yarn consumption or loom activity for such fabrics would be included in this report. Similarly, the yarns consumed in the manufacture of cotton fabrics produced as a secondary product in a mill primarily producing manmade fiber fabrics is excluded from this report and included in the Current Industrial Reports publication relating to manmade fiber broadwoven fabrics.

### WOOLEN AND WORSTED MILLS

Mills with woolen and worsted machinery which primarily produce manmade fiber fabrics do not report yarn consumption data. Separate data on knit cloth are published by the Bureau of the Census in quarterly series MQ-22K, Shipments of Knit Cloth, Including Interplant Transfers, beginning with the fourth quarter 1966. Data are available upon request.

### DEFINITION OF TERMS

Broad Fabrics--Fabric over 12" in width, as made.

Cotton Fabrics--Includes fabric wholly or chiefly by weight of cotton.

Blends, Chiefly Cotton--Includes fabrics chiefly by weight of cotton and containing other fibers, such as nylon, polyester, etc.

**Blends and Mixtures**--Fabrics which are made from more than one fiber are classified according to whether the fabric is chiefly cotton, wool, or manmade fiber. As examples, a fabric made of 55 percent cotton and 45 percent rayon is included in the cotton report; a fabric which is 40 percent cotton, 30 percent rayon, and 30 percent acetate is classified in the manmade fibers report. Blends and mixtures which are by weight 50 percent of one fiber and 50 percent of another fiber are classified according to the fiber of greatest value. As an example, a fabric which is 50 percent polyester and 50 percent cotton is classified as polyester. Fabrics which are 95 percent or more of one fiber are included in the 100 percent classification for that fiber.

Series	Title	Period Covered
MQ-22T Supp.	Broadwoven Fabrics--Blends and Mixtures	1965
MQ-22T.1	Broadwoven Fabrics, Average Weight and Width of Fabric (Cotton, Manmade Fiber, and Wool Fabrics)	First Quarter 1968
MQ-22T.1 Supp.	Broad Fabric Weaving Looms in Place by Type and Width	1964

### ACKNOWLEDGMENTS

This report was prepared in the Industry Division, Bureau of the Census, under the direction of Robert J. Nealon, Chief, Foods, Textiles, and Apparel. Charles T. Lee was directly responsible for the review of the data and preparation of the report. Elmer S. Biles, Chief of the Division, and Louis J. Owen, Acting Assistant Division Chief of Commodity and Industry Programs, provided overall direction and coordination to this project.

### SPECIAL TEXTILE REPORTS

At intervals of a few years, special supplemental reports on broadwoven fabrics are also published. Recent reports of this type are:

Table 1. SUMMARY OF PRODUCTION, BY CLASS OF FABRIC: 1961 TO 1971

# Cotton Broadwoven Gray Goods

## First Quarter 1972

U. S. DEPARTMENT OF COMMERCE • Social and Economic Statistics Administration • BUREAU OF THE CENSUS

June 1972

SERIES: MQ-22T.1(72)-1

The statistics in this publication are based on a survey of manufacturers and represent the entire U.S. production of cotton broadwoven gray fabrics over 12 inches in width. Estimates are included for companies whose reports were not received in time for tabulation. A more complete description of the survey appears on pages 9 and 10.

Table 1A.--Summary of Seasonally Adjusted Production Data, by Class of Fabric:  
1967 to 1972

(Millions of linear yards)

## DESCRIPTION OF SURVEY

The statistics in this publication and in the other MQ-22T reports were collected on Census Form MQ-22T, Broad Fabrics (Except Knit): Woven, Nonwoven, and Felts, from a panel of approximately 650 producers who account for about 95 percent of the total production. Estimates are included in the published figures for an additional 150 small producers reporting annually.

The current quarter's figures may also include estimates for respondents whose reports were not received in time for tabulation. Such missing figures are imputed from the quarter-to-quarter movements shown by reporting firms and are generally limited to a maximum of 10 percent to any one item. Individual items with higher imputation rates are footnoted.

The imputation rate is not an explicit indicator of the potential error in published figures due to nonresponse, because the actual quarterly movements for nonrespondents may or may not closely agree with the imputed movements. The probable range of difference between the actual and imputed figures is unknown. The degree of uncertainty regarding the accuracy of the data, however, increases as the percentage of imputation increases. Figures with high imputation rates, therefore, should be used with caution.

Statistics for previous quarters may be revised, due to receipt of corrected data from respondents, including late reports for which estimates were made, and other corrections. Figures which were revised significantly are indicated by footnotes.

The data in this report are not adjusted for number of working days.

## RELATED REPORTS

The following is a list of selected current and recent special textile reports published by the Census Bureau in the Current Industrial Reports series:

<u>Series No.</u>	<u>Title</u>	<u>Frequency</u>
M22A	Woven Fabrics--Production, Inventories, and Unfilled Orders	Monthly
M22D	Consumption on the Woolen and Worsted Systems	Monthly
M22P	Cotton, Manmade Fiber Staple, and Linters--Consumption, Stocks, and Spindle Activity	Monthly

MQ-22K	Shipments of Knit Cloth, Including Interplant Transfers	Quarterly
MA-22F	Yarn Production	Annual
MA-22G	Narrow Fabrics	Annual
MA-22S	Broadwoven Fabrics Finished	Annual
MA-22T.5	Nonwoven Fabrics	Annual
MA-23X	Sheets, Pillowcases, and Towels	Annual

## SPECIAL TEXTILE REPORTS

At intervals of a few years, special supplemental reports on broadwoven fabrics are also published. Recent reports of this type are:

<u>Series</u>	<u>Title</u>	<u>Period Covered</u>
M22T Supp.	Broadwoven Fabrics--Blends and Mixtures	1965
M22T.1 Supp.	Broadwoven Fabrics, Average Weight and Width of Fabric (Cotton, Manmade Fiber, and Wool Fabrics)	First Quarter 1968
M22T-1 Supp.	Broad Fabric Weaving Looms in Place by Type and Width	1964

## EXPLANATION OF TERMS

Cotton Fabrics--Wholly or chiefly by weight of cotton.

### Blends and Mixtures

Fabrics made from more than one fiber are classified in the same way as other fabrics, i.e., according to whether the fabric is chiefly cotton, wool, or manmade fiber. As examples, a fabric which is 55 percent cotton and 45 percent rayon is classified in the cotton section; a fabric which is 40 percent cotton, 30 percent rayon, and 30 percent acetate is classified in the manmade fibers section.

Blends and mixtures which are by weight 50 percent of one fiber and 10 percent of another fiber are classified according to the fiber of greatest value. As an example, a fabric which

is 50 percent polyester and 50 percent cotton is classified as polyester.

Fabrics which are 95 percent or more of one fiber are not considered blends. Such fabrics are included in the 100 percent classification for that fiber.

#### Units of Quantity

Production is reported in thousands of linear yards except as follows:

Blanketing--In thousands of linear yards, 72 inch width or equivalent.

Selected items in thousands of pounds as noted.

Production--Represents total production of cotton fabrics by all known weaving mills regardless of their primary activity.

Looms Operating--Represents number of looms operating on the specific fabrics at end of quarter.

Yarns Consumed Loom Hours, and Stocks of Selected Filament Yarns--Represents data for all mills primarily producing cotton broadwoven fabrics.

MILL CLASSIFICATION - Mills are classified according to the major type of fabric produced. However, this classification is not made on a quarterly basis. For 1967, particular mills whose primary activity had become the weaving of man-made fiber fabrics rather than cotton were given revised mill classifications. Consequently, data on loom hours, yarn consumption, and stocks shown in tables 3, 4, and 5 are not comparable with information shown for 1966 and prior years. An overlap between the old and new mill assignment is not available. It should be noted, however, that the combination of data shown in this series (M22T.1) and the manmade fiber broadwoven goods series (M22T.2) for yarns consumed, loom hours, and stocks are comparable.

#### **SEASONAL ADJUSTMENT**

This report presents seasonally adjusted data for a number of the most important series published quarterly in Current Industrial Reports Series MQ-22T.1, Cotton Broadwoven Gray Goods. The seasonal adjustment program largely eliminates the effect of normal seasonal variation (including variations due to vacations, weather, etc.) as measured over the time period for which data were used. The resulting information thus provides a better measure than the original data of the quarter-to-quarter variations which are due to factors that are not associated with a repetitive seasonal pattern.

The Census Bureau presents

## The Statistical Abstract of the United States — 1971

The U.S. Department of Commerce, Bureau of the Census presents the **1971 STATISTICAL ABSTRACT OF THE UNITED STATES**. This 92d edition of the "Stat Abstract," as it is popularly known, offers the Nation's most sought-after facts and figures in the world of government and private enterprise. Statesmen...businessmen...scientists... teachers and students alike **FIND** the information they want on the social, economic, and governmental characteristics of the United States - both current and historical. Statistics are presented in over 1,300 tables and charts derived from over 200 government, private, and international agencies. A special introductory table features **RECENT TRENDS** for selected measures of social and economic change. The **GUIDE TO SOURCES** lists over 800 statistical publications on 50 major subjects, such as population (including data from the 1970 Census of Population and Housing), government, health, education, agriculture, industry, construction, recreation, trade, and scores of other subjects. Whatever your line of work, business, profession, or avocational interests - when you need the facts, choose the comprehensive and authoritative **STATISTICAL ABSTRACT OF THE UNITED STATES, 1971**.

1954-First Quarter 1972

U. S. DEPARTMENT OF COMMERCE • Social and Economic Statistics Administration • BUREAU OF THE CENSUS

November 1972

SERIES: MQ-22T.1(72)-1 Supplement

## SUMMARY OF FINDINGS

During the period from 1968 to the first quarter of 1972, the average width of cotton broadwoven fabrics increased 18 percent. In 1968 the average linear yard of cotton fabrics included 1.30 square yards of material. This ratio decreased to 1.28 during the first quarter of 1972.

## SURVEY AUTHORIZATION

The survey of fabric production in linear yards, square yards, and pounds for the first quarter of 1972 was conducted as part of the 1972 Census of Manufactures as authorized by an Act of Congress (13 United States Code). Data for earlier years were also collected as part of the censuses of manufactures for those years.

## COVERAGE OF THE 1972 SURVEY

All respondents reporting in the Census quarterly broadwoven fabrics survey (Form MQ-22T) were included in the study of fabric weights and widths. Reports were received from manufacturers accounting for approximately 91 percent of the first quarter 1972 production of cotton fabrics. Based on these reports, ratios of production of square yards and pounds to linear yards were computed for each of the fabrics shown in table 2. These ratios were then applied to the actual production data, in linear yards, to obtain estimates of the square yards and pounds of fabric produced. For all fabrics, the coverage ratios shown in table 2 indicate the percentage of the total production reported by respondents in this study for 1972. Individual figures for square yards and pounds are withheld when they are based on reports accounting for less than 50 percent of the total production.

The linear yards figures shown are from the Current Industrial Reports Series MQ-22T.1 (72)-2, Cotton Broadwoven Goods, Second Quarter 1972.

## SEASONAL INFLUENCES

No analysis has been made of the effect on the 1972 data of seasonal influences which may have increased or decreased the production of specific fabrics during this period.

## MANMADE FIBER AND WOOL FABRICS

Information regarding the relationship of linear yards to square yards and pounds of fabric production was also collected for manmade fiber and woolen and worsted fabrics. The report for woolen and worsted fabrics has been issued in Current Industrial Reports Series MQ-22T.3 (72)-1 Supplement, while the report for manmade fiber fabrics will be issued in Current Industrial Reports Series MQ-22T.2(72)-1 Supplement.

## ACKNOWLEDGMENTS

This report was prepared in the Industry Division, Bureau of the Census, under the direction of Robert J. Nealon, Chief, Foods, Textiles, and Apparel Branch. Charles T. Lee, Jr., John E. Matthews, Jr., and Katie Rangos were directly responsible for the review of the data and preparation of the report. Elmer S. Biles, Chief of the Division, and Louis J. Owen, Assistant Division Chief of Commodity and Industry Programs, provided overall direction and coordination to this project.

-Represents zero. (D) Withheld to avoid disclosing figures for individual companies. This detail figure is, however, included in the appropriate subtotals and totals. n.e.c. Not elsewhere classified. <sup>†</sup>Revised.

<sup>1</sup>Represents percentage of total linear yards accounted for by reports received in this survey.

<sup>2</sup>Data withheld because production information in square yards and pounds was reported by companies accounting for less than 50 percent of the total production.

# Cotton Broadwoven Gray Goods

## Second Quarter 1972

U. S. DEPARTMENT OF COMMERCE • Social and Economic Statistics Administration • BUREAU OF THE CENSUS

September 1972

SERIES: MQ-22T.1(72)2

The statistics in this publication are based on a survey of manufacturers and represent the entire U.S. production of cotton broadwoven gray fabrics over 12 inches in width. Estimates are included for companies whose reports were not received in time for tabulation. A more complete description of the survey appears on pages 9 and 10.

Table 1A.--Summary of Seasonally Adjusted Production Data, by Class of Fabric:  
1967 to 1972

(Millions of linear yards)

## DESCRIPTION OF SURVEY

The statistics in this publication and in the other MQ-22T reports were collected on Census Form MQ-22T, Broad Fabrics (Except Knit): Woven, Nonwoven, and Felts, from a panel of approximately 650 producers who account for about 95 percent of the total production. Estimates are included in the published figures for an additional 150 small producers reporting annually.

The current quarter's figures may also include estimates for respondents whose reports were not received in time for tabulation. Such missing figures are imputed from the quarter-to-quarter movements shown by reporting firms and are generally limited to a maximum of 10 percent to any one item. Individual items with higher imputation rates are footnoted.

The imputation rate is not an explicit indicator of the potential error in published figures due to nonresponse, because the actual quarterly movements for nonrespondents may or may not closely agree with the imputed movements. The probable range of difference between the actual and imputed figures is unknown. The degree of uncertainty regarding the accuracy of the data, however, increases as the percentage of imputation increases. Figures with high imputation rates, therefore, should be used with caution.

Statistics for previous quarters may be revised, due to receipt of corrected data from respondents, including late reports for which estimates were made, and other corrections. Figures which were revised significantly are indicated by footnotes.

The data in this report are not adjusted for number of working days.

## RELATED REPORTS

The following is a list of selected current and recent special textile reports published by the Census Bureau in the Current Industrial Reports series:

Series No.	Title	Frequency
M22A	Woven Fabrics--Production, Inventories, and Unfilled Orders	Monthly
M22D	Consumption on the Woolen and Worsted Systems	Monthly
M22P	Cotton, Manmade Fiber Staple, and Linters--Consumption, Stocks, and Spindle Activity	Monthly

MQ-22K	Shipments of Knit Cloth, Including Interplant Transfers	Quarterly
MA-22F	Yarn Production	Annual
MA-22G	Narrow Fabrics	Annual
MA-22S	Broadwoven Fabrics Finished	Annual
MA-22T.5	Nonwoven Fabrics	Annual
MA-23X	Sheets, Pillowcases, and Towels	Annual

## SPECIAL TEXTILE REPORTS

At intervals of a few years, special supplemental reports on broadwoven fabrics are also published. Recent reports of this type are:

Series	Title	Period Covered
M22T Supp.	Broadwoven Fabrics--Blends and Mixtures	1965
M22T.1 Supp.	Broadwoven Fabrics, Average Weight and Width of Fabric (Cotton, Manmade Fiber, and Wool Fabrics)	First Quarter 1968
M22T-1 Supp.	Broad Fabric Weaving Looms in Place by Type and Width	1964

## EXPLANATION OF TERMS

Cotton Fabrics--Wholly or chiefly by weight of cotton.

### Blends and Mixtures

Fabrics made from more than one fiber are classified in the same way as other fabrics, i.e., according to whether the fabric is chiefly cotton, wool, or manmade fiber. As examples, a fabric which is 55 percent cotton and 45 percent rayon is classified in the cotton section; a fabric which is 40 percent cotton, 30 percent rayon, and 30 percent acetate is classified in the manmade fibers section.

Blends and mixtures which are by weight 50 percent of one fiber and 10 percent of another fiber are classified according to the fiber of greatest value. As an example, a fabric which

is 50 percent polyester and 50 percent cotton is classified as polyester.

Fabrics which are 95 percent or more of one fiber are not considered blends. Such fabrics are included in the 100 percent classification for that fiber.

#### Units of Quantity

Production is reported in thousands of linear yards except as follows:

Blanketing--In thousands of linear yards, 72 inch width or equivalent.

Selected items in thousands of pounds as noted.

Production--Represents total production of cotton fabrics by all known weaving mills regardless of their primary activity.

Looms Operating--Represents number of looms operating on the specific fabrics at end of quarter.

Yarns Consumed Loom Hours, and Stocks of Selected Filament Yarns--Represents data for all mills primarily producing cotton broadwoven fabrics.

MILL CLASSIFICATION - Mills are classified according to the major type of fabric produced. However, this classification is not made on a quarterly basis. For 1967, particular mills whose primary activity had become the weaving of man-made fiber fabrics rather than cotton were given revised mill classifications. Consequently, data on loom hours, yarn consumption, and stocks shown in tables 3, 4, and 5 are not comparable with information shown for 1966 and prior years. An overlap between the old and new mill assignment is not available. It should be noted, however, that the combination of data shown in this series (M22T.1) and the manmade fiber broadwoven goods series (M22T.2) for yarns consumed, loom hours, and stocks are comparable.

#### **SEASONAL ADJUSTMENT**

This report presents seasonally adjusted data for a number of the most important series published quarterly in Current Industrial Reports Series MQ-22T.1, Cotton Broadwoven Gray Goods. The seasonal adjustment program largely eliminates the effect of normal seasonal variation (including variations due to vacations, weather, etc.) as measured over the time period for which data were used. The resulting information thus provides a better measure than the original data of the quarter-to-quarter variations which are due to factors that are not associated with a repetitive seasonal pattern.

# UP-TO-DATE BUSINESS REPORTS

## Current Reports on Retail Trade

**\*Weekly Retail Sales**—Estimates of weekly retail sales for the United States for selected major kind-of-business groups, including figures for the comparable weeks in the previous year. Issued each Thursday.

**\*Monthly Retail Trade Report**—Estimates of monthly retail sales for the United States by major kind-of-business groups and selected individual kinds of business; separate figures shown, in more limited kind-of-business detail, for firms operating 11 or more retail stores. Summary sales data presented for geographic regions and divisions, and for 15 large States, the 20 large standard metropolitan statistical areas and the five largest cities. Also included are national estimates of end-of-month accounts receivable balances for retail stores.

**\*Annual Retail Trade Report**—Estimates of inventories held by retailers in the United States by major kind-of-business groups and selected individual kinds of business. Separate figures shown in more limited kind-of-business detail for firms operating 11 or more retail stores. Also shown are sales-inventory ratios as well as per capita sales, by kind-of-business for the United States, by major kind-

of-business groups for geographic regions, and summary figures for geographic divisions and for the larger States and standard metropolitan statistical areas.

**\*Advance Monthly Retail Sales**—Advance estimates of monthly retail sales for the United States (including data adjusted for seasonal variations and trading day differences) are compiled by major kind-of-business groups about 10 days after the month covered. Publication of this series has been temporarily suspended but unofficial estimates may be obtained from the Business Division of the Bureau of the Census.

**†Monthly Department Store Sales for Selected Areas**—Monthly dollar sales volume and the percent change in sales compared with the previous month and the same month in the previous year. Cumulative year-to-date comparisons with data for the previous year are also shown. Data are collected in about 200 standard metropolitan statistical areas, cities, and other areas.

## Selected Services Trade

**†Monthly Selected Services Receipts**—This report provides data on monthly receipts of six major kind-of-business groups of services: Hotels,

motels, tourist courts, trailer parks, and camps; personal services; business services; automotive services; miscellaneous repair services; and motion picture, amusement, and recreation services. Comparable data for the previous months and for the same month in the previous year are also shown, in addition to the percent changes. Data are shown both unadjusted and adjusted for seasonal variations and trading day differences.

## Wholesale Trade

**\*Monthly Wholesale Trade Report**—This report includes estimated dollar sales, end-of-month inventories, and stock-sales ratios of merchant wholesalers, by kind of business for the current month, with comparisons for previous months. Dollar volume sales estimates are shown by geographic division in total and for durable and non-durable kind-of-business subtotals. Sales and inventory trends (percent changes) are shown by detailed kinds of business at the national level and for selected kinds of businesses by geographic division. Measures of sampling variability are given. United States data are shown adjusted for seasonal variations and in the case of sales, also for trading-day differences.

## Other Business Reports

**†Canned Food Report**—This report is issued on five dates—January 1, April 1, June 1, July 1, and November 1—to show total stocks of wholesale distributors and canners, including warehouses of retail multiunit organizations, of selected canned food items (vegetables, fruits, juices, fish). In the January 1 report, separate data are shown for the No. 10 can size as well as for warehouse stocks of retail multiunit organizations.

**†Green Coffee Inventories and Roastings**—This quarterly report provides estimates of green coffee inventories held by roasters, importers, and dealers, the quantity of green coffee roasted, and the amount roasted for soluble use, by quarters, for the current and previous three years. Also included are quarterly imports of green coffee during the same period.

# Cotton Broadwoven Gray Goods

Third Quarter 1972

U. S. DEPARTMENT OF COMMERCE • Social and Economic Statistics Administration • BUREAU OF THE CENSUS

December 1972

SERIES: MQ-22T.1(72)-3

The statistics in this publication are based on a survey of manufacturers and represent the entire U.S. production of cotton broadwoven gray fabrics over 12 inches in width. Estimates are included for companies whose reports were not received in time for tabulation. A more complete description of the survey appears on pages 9 and 10.

**Table 1A.--Summary of Seasonally Adjusted Production Data, by Class of Fabric:  
1967 to 1972**

(Millions of linear yards)

Quarter and year	Cotton broadwoven gray goods, total	Duck and allied fabrics	Sheeting and allied coarse and medium yarn fabrics	Print cloth yarn fabrics	Carded colored yarn fabrics	Towels, towelings and dishcloths	Napped fabrics, blankets and blanketing	Fine cotton fabrics	Other woven cotton fabrics and specialties

## DESCRIPTION OF SURVEY

The statistics in this publication and in the other MQ-22T reports were collected on Census Form MQ-22T, Broad Fabrics (Except Knit): Woven, Nonwoven, and Felts, from a panel of approximately 650 producers who account for about 95 percent of the total production. Estimates are included in the published figures for an additional 150 small producers reporting annually.

The current quarter's figures may also include estimates for respondents whose reports were not received in time for tabulation. Such missing figures are imputed from the quarter-to-quarter movements shown by reporting firms and are generally limited to a maximum of 10 percent to any one item. Individual items with higher imputation rates are footnoted.

The imputation rate is not an explicit indicator of the potential error in published figures due to nonresponse, because the actual quarterly movements for nonrespondents may or may not closely agree with the imputed movements. The probable range of difference between the actual and imputed figures is unknown. The degree of uncertainty regarding the accuracy of the data, however, increases as the percentage of imputation increases. Figures with high imputation rates, therefore, should be used with caution.

Statistics for previous quarters may be revised, due to receipt of corrected data from respondents, including late reports for which estimates were made, and other corrections. Figures which were revised significantly are indicated by footnotes.

The data in this report are not adjusted for number of working days.

## RELATED REPORTS

The following is a list of selected current and recent special textile reports published by the Census Bureau in the Current Industrial Reports series:

Series No.	Title	Frequency
M22A	Woven Fabrics--Production, Inventories, and Unfilled Orders	Monthly
M22D	Consumption on the Woolen and Worsted Systems	Monthly
M22P	Cotton, Manmade Fiber Staple, and Linters--Consumption, Stocks, and Spindle Activity	Monthly

MQ-22K	Shipments of Knit Cloth, Including Interplant Transfers	Quarterly
MA-22F	Yarn Production	Annual
MA-22G	Narrow Fabrics	Annual
MA-22S	Broadwoven Fabrics Finished	Annual
MA-22T.5	Nonwoven Fabrics	Annual
MA-23X	Sheets, Pillowcases, and Towels	Annual

## SPECIAL TEXTILE REPORTS

At intervals of a few years, special supplemental reports on broadwoven fabrics are also published. Recent reports of this type are:

Series	Title	Period Covered
M22T Supp.	Broadwoven Fabrics--Blends and Mixtures	1965
M22T.1 Supp.	Broadwoven Fabrics, Average Weight and Width of Fabric (Cotton, Manmade Fiber, and Wool Fabrics)	First Quarter 1968
M22T-1 Supp.	Broad Fabric Weaving Looms in Place by Type and Width	1964

## EXPLANATION OF TERMS

Cotton Fabrics--Wholly or chiefly by weight of cotton.

### Blends and Mixtures

Fabrics made from more than one fiber are classified in the same way as other fabrics, i.e., according to whether the fabric is chiefly cotton, wool, or manmade fiber. As examples, a fabric which is 55 percent cotton and 45 percent rayon is classified in the cotton section; a fabric which is 40 percent cotton, 30 percent rayon, and 30 percent acetate is classified in the manmade fibers section.

Blends and mixtures which are by weight 50 percent of one fiber and 10 percent of another fiber are classified according to the fiber of greatest value. As an example, a fabric which

is 50 percent polyester and 50 percent cotton is classified as polyester.

Fabrics which are 95 percent or more of one fiber are not considered blends. Such fabrics are included in the 100 percent classification for that fiber.

#### Units of Quantity

Production is reported in thousands of linear yards except as follows:

Blanketing--In thousands of linear yards, 72 inch width or equivalent.

Selected items in thousands of pounds as noted.

Production--Represents total production of cotton fabrics by all known weaving mills regardless of their primary activity.

Looms Operating--Represents number of looms operating on the specific fabrics at end of quarter.

Yarns Consumed Loom Hours, and Stocks of Selected Filament Yarns--Represents data for all mills primarily producing cotton broadwoven fabrics.

MILL CLASSIFICATION - Mills are classified according to the major type of fabric produced. However, this classification is not made on a quarterly basis. For 1967, particular mills whose primary activity had become the weaving of man-made fiber fabrics rather than cotton were given revised mill classifications. Consequently, data on loom hours, yarn consumption, and stocks shown in tables 3, 4, and 5 are not comparable with information shown for 1966 and prior years. An overlap between the old and new mill assignment is not available. It should be noted, however, that the combination of data shown in this series (M22T.1) and the manmade fiber broadwoven goods series (M22T.2) for yarns consumed, loom hours, and stocks are comparable.

#### **SEASONAL ADJUSTMENT**

This report presents seasonally adjusted data for a number of the most important series published quarterly in Current Industrial Reports Series MQ-22T.1, Cotton Broadwoven Gray Goods. The seasonal adjustment program largely eliminates the effect of normal seasonal variation (including variations due to vacations, weather, etc.) as measured over the time period for which data were used. The resulting information thus provides a better measure than the original data of the quarter-to-quarter variations which are due to factors that are not associated with a repetitive seasonal pattern.

# The Methods and Materials of Demography

These two volumes offer a systematic and comprehensive exposition, with illustrations, of the methods currently used by technicians and research workers in dealing with demographic data. They are intended to serve both as texts for courses in demographic methods and as references for professional workers who use population data. The publications deal with the sources, limitations, underlying definitions, and bases of classification of demographic data, as well as with techniques and methods that have been developed for summarizing and analyzing them.

Topics covered include formal demography and the study of many social and economic characteristics of the population.

The derivation of the demographic measures described is usually illustrated in step-by-step examples using actual statistics, drawn from a wide range of geographic areas, both in the United States and abroad. Considerable emphasis is placed on the kinds of data available for statistically underdeveloped areas, as well as on the special methods applicable to these areas.

At the same time, the materials of the United States are covered in great detail, especially with respect to sources, definitions, and historical developments. Plans for the enumeration, processing, and tabulation of the 1970 Census of the United States are included. The methodological material is presented in the simplest mathematical form and, for the most part, a knowledge of advanced mathematics is not required. The volumes benefit from the contribution of a number of specialists who participated as associate authors.

The two-volume book consists of about 26 subject chapters and three appendices of reference tables, covering approximately 900 pages. It is printed in the large format of decennial census reports and bound in vellum.

The following is a list of some of the subjects treated and reflects the scope of the work:

- Basic sources of demographic statistics
- Collection and processing of demographic data
- Population size and distribution
- Sex and age composition
- Racial and ethnic composition
- Marital characteristics and family groups
- Educational and economic characteristics
- Mortality and the life table
- Natality
- Reproductivity
- Marriage and divorce
- International migration, internal migration, and short-distance mobility
- Population estimates and projections
- Methods of estimation for statistically underdeveloped areas.

The preparation of the book was supported in part by the Office of Population, U.S. Agency for International Development.

The principal authors are Henry S. Shryock, formerly Assistant Chief, Population Division, U.S. Bureau of the Census, and Jacob S. Siegel, Staff Assistant for Program Development, Population Division.

## Cotton Broadwoven Gray Goods

Fourth Quarter 1972

U. S. DEPARTMENT OF COMMERCE • Social and Economic Statistics Administration • BUREAU OF THE CENSUS

March 1973

SERIES: MQ-22T.1(72)-4

The statistics in this publication are based on a survey of manufacturers and represent the entire U.S. production of cotton broadwoven gray fabrics over 12 inches in width. Estimates are included for companies whose reports were not received in time for tabulation. A more complete description of the survey appears on pages 9 and 10.

Table 1A.—Summary of Seasonally Adjusted Production Data, by Class of Fabric:  
1967 to 1972

(Millions of linear yards)

Quarter and year	Cotton broadwoven gray goods, total	Duck and allied fabrics	Sheeting and allied coarse and medium yarn fabrics	Print cloth yarn fabrics	Carded colored yarn fabrics	Towels, towelings and dishtowels	Napped fabrics, blankets and blanketing	Fine cotton fabrics	Other woven cotton fabrics and specialties

DATA", FOR DISCUSSION.

## DESCRIPTION OF SURVEY

The statistics in this publication and in the other MQ-22T reports were collected on Census Form MQ-22T, Broad Fabrics (Except Knit): Woven, Nonwoven, and Felts, from a panel of approximately 650 producers who account for about 95 percent of the total production. Estimates are included in the published figures for an additional 150 small producers reporting annually.

The current quarter's figures may also include estimates for respondents whose reports were not received in time for tabulation. Such missing figures are imputed from the quarter-to-quarter movements shown by reporting firms and are generally limited to a maximum of 10 percent to any one item. Individual items with higher imputation rates are footnoted.

The imputation rate is not an explicit indicator of the potential error in published figures due to nonresponse, because the actual quarterly movements for nonrespondents may or may not closely agree with the imputed movements. The probable range of difference between the actual and imputed figures is unknown. The degree of uncertainty regarding the accuracy of the data, however, increases as the percentage of imputation increases. Figures with high imputation rates, therefore, should be used with caution.

Statistics for previous quarters may be revised, due to receipt of corrected data from respondents, including late reports for which estimates were made, and other corrections. Figures which were revised significantly are indicated by footnotes.

The data in this report are not adjusted for number of working days.

## RELATED REPORTS

The following is a list of selected current and recent special textile reports published by the Census Bureau in the Current Industrial Reports series:

Series No.	Title	Frequency
M22A	Woven Fabrics--Production, Inventories, and Unfilled Orders	Monthly
M22D	Consumption on the Woolen and Worsted Systems	Monthly
M22P	Cotton, Manmade Fiber Staple, and Linters--Consumption, Stocks, and Spindle Activity	Monthly

MQ-22K	Shipments of Knit Cloth, including Interplant Transfers	Quarterly
MA-22F	Yarn Production	Annual
MA-22G	Narrow Fabrics	Annual
MA-22S	Broadwoven Fabrics Finished	Annual
MA-22H	Nonwoven Fabrics	Annual
MA-23X	Sheets, Pillowcases, and Towels	Annual

## SPECIAL TEXTILE REPORTS

At intervals of a few years, special supplemental reports on broadwoven fabrics are also published. Recent reports of this type are:

Series	Title	Period Covered
M22T Supp.	Broadwoven Fabrics--Blends and Mixtures	1965
M22T Supp.	Broadwoven Fabrics, Average Weight and Width of Fabric (Cotton, Manmade Fiber, and Wool Fabrics)	First Quarter 1972
M22T-1 Supp.	Broad Fabric Weaving Looms in Place by Type and Width	1964

## EXPLANATION OF TERMS

Cotton Fabrics--Wholly or chiefly by weight of cotton.

### Blends and Mixtures

Fabrics made from more than one fiber are classified in the same way as other fabrics, i.e., according to whether the fabric is chiefly cotton, wool, or manmade fiber. As examples, a fabric which is 55 percent cotton and 45 percent rayon is classified in the cotton section; a fabric which is 40 percent cotton, 30 percent rayon, and 30 percent acetate is classified in the manmade fibers section.

Blends and mixtures which are by weight 50 percent of one fiber and 10 percent of another fiber are classified according to the fiber of greatest value. As an example, a fabric which

is 50 percent polyester and 50 percent cotton is classified as polyester.

Fabrics which are 95 percent or more of one fiber are not considered blends. Such fabrics are included in the 100 percent classification for that fiber.

#### Units of Quantity

Production is reported in thousands of linear yards except as follows:

Blanketing--In thousands of linear yards, 72 inch width or equivalent.

Selected items in thousands of pounds as noted.

Production--Represents total production of cotton fabrics by all known weaving mills regardless of their primary activity.

Looms Operating--Represents number of looms operating on the specific fabrics at end of quarter.

Yarns Consumed Loom Hours, and Stocks of Selected Filament Yarns--Represents data for all mills primarily producing cotton broadwoven fabrics.

Revision to mill assignment data --Information on loom hours, yarn consumption, and stocks shown in tables 3, 4, and 5 are not comparable with information prior to third quarter 1972 because of the reclassification of particular mills whose primary activity is now the weaving of manmade fiber fabrics rather than cotton fabrics. An overlap between the old and new mill assignment is available by comparing the preliminary and revised third quarter data as published in this series. It should be noted that the combination of data shown in this series (MQ-22T.1) and the manmade fiber broadwoven goods report (MQ-22T.2) for yarns consumed by type of mill, loom hours, and stocks are comparable.

#### **SEASONAL ADJUSTMENT**

This report presents seasonally adjusted data for a number of the most important series published quarterly in Current Industrial Reports Series MQ-22T.1, Cotton Broadwoven Gray Goods. The seasonal adjustment program largely eliminates the effect of normal seasonal variation (including variations due to vacations, weather, etc.) as measured over the time period for which data were used. The resulting information thus provides a better measure than the original data of the quarter-to-quarter variations which are due to factors that are not associated with a repetitive seasonal pattern.

## CURRENT INDUSTRIAL REPORTS

## Cotton Broadwoven Gray Goods

Summary for 1972

U. S. DEPARTMENT OF COMMERCE • Social and Economic Statistics Administration • BUREAU OF THE CENSUS

June 1973

SERIES: MQ-22T.1(72)-5

The data shown in this report summarize the information published in the quarterly MQ-22T.1 series. Any revisions made to quarterly data previously published in this series are so noted.

## DESCRIPTION OF SURVEY

The statistics in this publication were published in Census quarterly series MQ-22T.1 Cotton Broadwoven Gray Goods, from a sample of mills accounting for approximately 98 percent of the total U.S. production of cotton broadwoven goods. Estimates have been included for manufacturers whose reports were not received and are based on their production as reported in the 1971 annual survey.

The data in this report are not adjusted for seasonal variation or number of working days.

## COVERAGE

The information contained in this report is collected on Census quarterly form MQ-22T, "Broad Fabrics (Except Knit): Woven, Nonwoven, and Felts." A separate report is requested from each mill, although in some instances the "mill" reported as one unit to the Census Bureau constitutes more than one location.

Fabrics woven on commission are reported in this series by the commission mill, not by the company for which the work is contracted.

## COVERAGE OF INDIVIDUAL TABLES

The production figures shown in tables 1 and 2 represent total production of the specified

fabrics by all weaving mills regardless of their primary activity. However, because a single report is collected from an individual mill, the information shown in tables 3, 4, 5, and 6 relates to the entire activity of all mills primarily producing cotton fabrics. Insofar as these mills produced other fabrics (manmade fiber or wool) as a secondary project, the yarn consumption or loom activity for such fabrics would be included in this report. Similarly, the yarns consumed in the manufacture of cotton fabrics produced as a secondary product in a mill primarily producing manmade fiber fabrics is excluded from this report and included in the Current Industrial Reports publication relating to manmade fiber broadwoven fabrics.

## WOOLEN AND WORSTED MILLS

Mills with woolen and worsted machinery which primarily produce manmade fiber fabrics do not report yarn consumption data. Separate data on knit cloth are published by the Bureau of the Census in quarterly series MQ-22K, Shipments of Knit Cloth, Including Interplant Transfers, beginning with the fourth quarter 1966. Data are available upon request.

## DEFINITION OF TERMS

Broad Fabrics--Fabric over 12" in width, as made.

Cotton Fabrics--Includes fabric wholly or chiefly by weight of cotton.

Blends, Chiefly Cotton--Includes fabrics chiefly by weight of cotton and containing other fibers, such as nylon, polyester, etc. Documents

JUL 21 1973

**Blends and Mixtures--**Fabrics which are made from more than one fiber are classified according to whether the fabric is chiefly cotton, wool, or manmade fiber. As examples, a fabric made of 55 percent cotton and 45 percent rayon is included in the cotton report; a fabric which is 40 percent cotton, 30 percent rayon, and 30 percent acetate is classified in the manmade fibers report. Blends and mixtures which are by weight 50 percent of one fiber and 50 percent of another fiber are classified according to the fiber of greatest value. As an example, a fabric which is 50 percent polyester and 50 percent cotton is classified as polyester. Fabrics which are 95 percent or more of one fiber are included in the 100 percent classification for that fiber.

## SPECIAL TEXTILE REPORTS

At intervals of a few years, special supplemental reports on broadwoven fabrics are also published. Recent reports of this type are:

Series	Title	Period Covered
MQ-22T Supp.	Broadwoven Fabrics-- Blends and Mixtures	1965
MQ-22T.1	Broadwoven Fabrics, Average Weight and Width of Fabric (Cotton, Manmade Fiber, and Wool Fabrics)	First Quarter 1972
MQ-22T.1 Supp.	Broad Fabric Weaving Looms in Place by Type and Width	1964

## ACKNOWLEDGMENTS

This report was prepared in the Industry Division, Bureau of the Census, under the direction of Robert J. Nealon, Chief, Foods, Textiles, and Apparel. Charles T. Lee was directly responsible for the review of the data and preparation of the report. Elmer S. Biles, Chief of the Division, and Louis J. Owen, Assistant Division Chief for Commodity and Industry Programs, provided overall direction and coordination to this project.

## Broadwoven Goods

## Summary of Looms in Place

December 31, 1972

U. S. DEPARTMENT OF COMMERCE • Social and Economic Statistics Administration • BUREAU OF THE CENSUS

August 1973

SERIES: MQ-22T(72)-Supplement

The data shown in this report summarize the information published in the quarterly MQ-22T series. No revisions have been made to data previously published.

Looms in place at broadwoven fabric mills, at the end of 1972 totaled 332,072. Of the total number of looms in place, there were 326,585 in place at cotton and manmade fiber fabric mills 3,611 in woolen and worsted mills and 1,876 at tire cord and tire fabric mills.

Coverage - Data are based on quarterly reports received on Census Form MQ-22T, Broad Fabrics (except knit): Woven, Nonwoven, and Felts. Estimates are included for respondents whose reports were not received in time for tabulation.

Beginning with first quarter 1969, these data, by type of mill, have been published separately on a quarterly basis in each of the Current Industrial Report Series MQ-22T (Cotton, Manmade, Wool, and Tire Cord).

LOOMS IN PLACE AT BROADWOVEN FABRIC MILLS, END OF 1972 AND 1971

Type of loom	Number in place, by type of mill <sup>1</sup>				
	Total	Cotton mills	Manmade fiber fabric mills	Woolen and worsted mills	Tire cord and tire fabric mills
End of 1972					
TOTAL.....	332,072	154,795	171,790	3,611	1,876
Single shuttle-cam looms.....	278,468	121,367	82,819	189	1,876
Single shuttle-dobby looms.....		15,085	57,132		
Multiple shuttle box or headmotion looms.....	42,659	8,735	19,769	2,670	-
Pile and Jacquard looms.....		6,083	5,402		
Shuttleless looms and weaving machines.	10,945	3,525	6,668	752	-
End of 1971					
TOTAL.....	342,020	220,863	113,312	5,566	2,279
Single shuttle-cam looms.....	286,093	173,322	35,907	87	2,279
Single shuttle-dobby looms.....		21,892	52,504	102	
Multiple shuttle box or headmotion looms.....	45,684	14,958	15,315	3,416	-
Pile and Jacquard looms.....		6,248	5,747		
Shuttleless looms and weaving machines.	10,243	4,443	3,839	1,961	-

- Represents zero.

<sup>1</sup>Mill classification is determined by the primary type of fabric produced by the establishment.

The assignment for 1972 is based on data reported for 1972 on the MQ-22T, Broadwoven Fabric (Gray) whereas the assignment for 1971 is based on their output in 1967.

Inquiries concerning these figures should be addressed to the U.S. Department of Commerce, Bureau of the Census, Industry Division, Washington, D.C. 20233. This publication is for sale by the Bureau of the Census, Price: 25 cents per copy.

## Broadwoven Gray Fabric Production

## Seasonal Adjustment Supplement

1968 to 1972

U. S. DEPARTMENT OF COMMERCE • Social and Economic Statistics Administration • BUREAU OF THE CENSUS

October 1973

SERIES: MQ-22T Supplement

This report presents seasonally adjusted data for the years 1968 to 1972 for a number of the product class aggregates published quarterly in Current Industrial Reports Series MQ-22T, Broadwoven Fabrics. The data for the years 1950 to 1967 were excluded from this publication because there were no significant changes. The data for the years 1950 to 1967 are available in the MQ-22T Seasonal Adjustment Supplement published on June 18, 1971.

## SEASONAL ADJUSTMENTS

The seasonal adjustment program largely eliminates the effect of normal seasonal variations (including variations due to vacations, weather, etc.) as measured over the time period for which data were used. The resulting information thus provides a better measure than the original data of quarter-to-quarter variations, which are due to factors unassociated with a repetitive seasonal pattern.

The seasonal adjustments were made using the X-11Q variant of the Census Bureau's seasonal adjustment program. This program is amply described in the literature on this method.<sup>1</sup>

For each series included in this report the following tables are shown:

<sup>1</sup>Electronic Computers and Business Indicators, National Bureau of Economic Research Occasional Paper 57 (New York, 1957); Tests and Revisions of Bureau of the Census Methods of Seasonal Adjustments, Bureau of the Census Technical Paper No. 5 (Washington, 1961, \$1.00); The X-11 Variant of the Census Method 11 Seasonal Adjustment Program, Bureau of the Census Technical Paper No. 15 (Washington, 1967, \$0.50).

- (1) Seasonally-adjusted data
- (2) Data without seasonal adjustment (original series)
- (3) Seasonal adjustment factors. The seasonally-adjusted data are obtained by dividing the unadjusted data by the seasonal factors for the specific month
- (4) Average percentage changes and related measures for each series.

## DEFINITIONS

The symbols and terms used in table 4 are briefly defined here; more complete explanations appear in Electronic Computers and Business Indicators, by Julius Shiskin, issued as Occasional Paper 57 by the National Bureau of Economic Research, 1957 (reprinted from Journal of Business, October 1957).

" $\bar{C}\bar{I}$ " is the average quarter-to-quarter percentage change, without regard to sign, in the seasonally adjusted series (i.e., the series after adjustment for measurable seasonal, trading-day, and holiday variations).

" $\bar{I}$ " is the same for the irregular component, obtained by dividing the cyclical component into the seasonally adjusted series.

" $\bar{C}$ " is the same for the cyclical component, a smooth, flexible moving average of the seasonally adjusted series.

" $\bar{I}/\bar{C}$ " is a measure of the relative smoothness (small values) or irregularity (large values) of the seasonally adjusted series.

DEPOSITORY

"QCD" (quarters for cyclical dominance) provides an estimate of the appropriate time span over which to observe cyclical movements in a quarterly series. It is small for smooth series and large for irregular series.

"Average Duration of Run" (ADR) is another measure of smoothness and is equal to the average

number of consecutive quarterly changes in the same direction in any series of observations. The ADR is shown for the seasonally adjusted series CI, irregular component I, cyclical component C, and the QCD curve. The QCD curve is an unweighted moving average (with the number of terms equal to QCD) of the seasonally adjusted series.

<sup>1</sup>Includes data for "Chiefly Nylon Filament Yarn Fabric" and "All Other Filament Yarn Fabrics" which are not shown separately.

# CURRENT POPULATION REPORTS

In addition to the findings of the Census of Population, conducted every 10 years, the Bureau of the Census publishes continuing and up-to-date statistics on population counts, characteristics, and other special studies on the American people. Data are issued in the eight separate series of reports described herein and released under the general title, Current Population Reports.

## P-20 POPULATION CHARACTERISTICS.

Current national and, in some cases, regional data on geographic residence and mobility, fertility, education, school enrollment, marital status, numbers and characteristics of household and families, etc. Approximately 10 reports each year.

**P-23 SPECIAL STUDIES.** Infrequent reports on methods, concepts, or specialized data.

## P-25 POPULATION ESTIMATES AND PROJECTIONS.

Monthly estimates of the total population of the United States; annual mid-year estimates of the population of States, by broad age groups, and of the United States by age, color, and sex; annual estimates of the components of population change. Estimates of the population selected metropolitan areas and their component counties. Projections of the future population of the United States and individual States. Approximately 20 reports each year.

**P-26 FEDERAL-STATE COOPERATIVE PROGRAM FOR POPULATION ESTIMATES.** Population estimates for counties for selected States in which the figures are prepared by a State agency as part of the Federal-State Cooperative Program for Local Population Estimates.

## P-27 FARM POPULATION.

(Census-ERS). Data on the size and selected characteristics of the farm population of the United States. Issued jointly with the Economic Research Service, U.S. Department of Agriculture. One or two reports each year.

**P-28 SPECIAL CENSUSES.** Results of population censuses taken at the request and expense of city or other local governments. Subscription includes only the quarterly and annual summaries showing the total population figures for all the censuses conducted during the particular period. Individual reports issued for areas of 50,000 or more, showing the population by age, sex, and color are available separately. See "How to Order Reports." Five reports each year.

**P-60 CONSUMER INCOME.** Information on the proportions of families and persons at various income levels. Also data on the relationship of income to age, sex, color, family size, education, occupation, work experience, and other characteristics. Two reports each year.

## P-65 CONSUMER BUYING INDICATORS.

Information on household ownership and recent purchase of cars, trucks, and selected household equipment. Ownership and purchase data are shown by income, age of head, residence, race, and other household characteristics. Annually.

## HOW TO ORDER REPORTS

All Current Population Reports are sold as a single subscription for \$30.50 a year (add \$7.75 for foreign mailing). Price includes Series P-20, P-23, P-25, P-26, P-27, P-28 (quarterly and annual summaries only), P-60, and P-65.

Subscriptions to individual series are not sold separately, but single copies of reports issued in all series except P-28 may be obtained from Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402. Individual city or area reports in the P-28 series may be ordered from the Social and Economic Statistics Administration—prices vary. For information on CP reports, write to Publications Distribution Section, Social and Economic Statistics Administration, Washington, D.C. 20233.

# IF YOU'RE RUSTY ON THE SUBJECT OF CORROSION, READ THESE!

Here are four Metals & Ceramics Information Center reports on corrosion and its treatment:

"The Corrosion of Metals in Marine Environments" is a current resource of information on the advanced metals and their use in hostile marine environments. It helps you to choose materials and equipment right for your job.

"Hot Corrosion in Gas Turbines" deals primarily with the sulfidation problem and explains major testing methods and research.

"Oxidation of Iron, Nickel, and Cobalt-base Alloys" guides the engineer or metallurgist to current data on oxidation of the pure metals and their alloys, as well as of more complex engineering alloys.

"Shot Peening for Improved Fatigue Properties and Stress-Corrosion Resistance" contains a summary of current peening procedures, and methods of control and improvement that can be achieved with these techniques.

Any one or all four of these studies can be invaluable to you in your research or in practical day to day operations. Put them on your shelf by filling out and returning the coupon below.

### GENTLEMEN:

- ☐ Please send me \_\_\_\_\_ copies of the MCIC report THE CORROSION OF METALS IN MARINE ENVIRONMENTS, hard cover copies \$12.50 each (\$15.00 foreign) or \_\_\_\_\_ soft cover copies at \$7.50 each (\$10.00 foreign) AD-712 585-H or AD-712 585-S.
- ☐ Send me \_\_\_\_\_ copies of the MCIC Report HOT CORROSION IN GAS TURBINES at \$10.75 each (\$13.25 foreign) AD-745 474.
- ☐ Send me \_\_\_\_\_ copies of the MCIC report OXIDATION OF IRON, NICKEL AND COBALT-BASE ALLOYS at \$10.75 each (\$13.25 foreign) AD-745 473.
- ☐ Send me \_\_\_\_\_ copies of the MCIC report SHOT PEENING FOR IMPROVED FATIGUE PROPERTIES AND STRESS-CORROSION RESISTANCE at \$7.50 each. (\$10.00 foreign) AD-735 409.

## Cotton Broadwoven Gray Goods

First Quarter 1973

U. S. DEPARTMENT OF COMMERCE • Social and Economic Statistics Administration • BUREAU OF THE CENSUS

June 1973

SERIES: MQ-22T.1(73)-1

The statistics in this publication are based on a survey of manufacturers and represent the entire U.S. production of cotton broadwoven gray fabrics over 12 inches in width. Estimates are included for companies whose reports were not received in time for tabulation. A more complete description of the survey appears on pages 9 and 10.

Table 1A.—Summary of Seasonally Adjusted Production Data, by Class of Fabric:  
1968 to 1973

(Millions of linear yards)

Quarter and year	Cotton broadwoven gray goods, total	Duck and allied fabrics	Sheeting and allied coarse and medium yarn fabrics	Print cloth yarn fabrics	Carded colored yarn fabrics	Towels, towelings, and dishcloths	Napped fabrics, blankets, and blanketing	Fine cotton fabrics	Other woven cotton fabrics and specialties

## DESCRIPTION OF SURVEY

The statistics in this publication and in the other MQ-22T reports were collected on Census Form MQ-22T, Broad Fabrics (Except Knit): Woven, Nonwoven, and Felts, from a panel of approximately 650 producers who account for about 95 percent of the total production. Estimates are included in the published figures for an additional 150 small producers reporting annually.

The current quarter's figures may also include estimates for respondents whose reports were not received in time for tabulation. Such missing figures are imputed from the quarter-to-quarter movements shown by reporting firms and are generally limited to a maximum of 10 percent to any one item. Individual items with higher imputation rates are footnoted.

The imputation rate is not an explicit indicator of the potential error in published figures due to nonresponse, because the actual quarterly movements for nonrespondents may or may not closely agree with the imputed movements. The probable range of difference between the actual and imputed figures is unknown. The degree of uncertainty regarding the accuracy of the data, however, increases as the percentage of imputation increases. Figures with high imputation rates, therefore, should be used with caution.

Statistics for previous quarters may be revised, due to receipt of corrected data from respondents, including late reports for which estimates were made, and other corrections. Figures which were revised significantly are indicated by footnotes.

The data in this report are not adjusted for number of working days.

## RELATED REPORTS

The following is a list of selected current and recent special textile reports published by the Census Bureau in the Current Industrial Reports series:

<u>Series No.</u>	<u>Title</u>	<u>Frequency</u>
M22A	Woven Fabrics--Production, Inventories, and Unfilled Orders	Monthly
M22D	Consumption on the Woolen and Worsted Systems	Monthly
M22P	Cotton, Manmade Fiber Staple, and Linters--Consumption, Stocks, and Spindle Activity	Monthly

MQ-22K	Shipments of Knit Cloth, including Interplant Transfers	Quarterly
MA-22F	Yarn Production	Annual
MA-22G	Narrow Fabrics	Annual
MA-22S	Broadwoven Fabrics Finished	Annual
MA-22H	Nonwoven Fabrics	Annual
MA-23X	Sheets, Pillowcases, and Towels	Annual

## SPECIAL TEXTILE REPORTS

At intervals of a few years, special supplemental reports on broadwoven fabrics are also published. Recent reports of this type are:

<u>Series</u>	<u>Title</u>	<u>Period Covered</u>
M22T Supp.	Broadwoven Fabrics--Blends and Mixtures	1965
M22T Supp.	Broadwoven Fabrics, Average Weight and Width of Fabric (Cotton, Manmade Fiber, and Wool Fabrics)	First Quarter 1972
M22T-1 Supp.	Broad Fabric Weaving Looms in Place by Type and Width	1964

## EXPLANATION OF TERMS

Cotton Fabrics--Wholly or chiefly by weight of cotton.

### Blends and Mixtures

Fabrics made from more than one fiber are classified in the same way as other fabrics, i.e., according to whether the fabric is chiefly cotton, wool, or manmade fiber. As examples, a fabric which is 55 percent cotton and 45 percent rayon is classified in the cotton section; a fabric which is 40 percent cotton, 30 percent rayon, and 30 percent acetate is classified in the manmade fibers section.

Blends and mixtures which are by weight 50 percent of one fiber and 10 percent of another fiber are classified according to the fiber of greatest value. As an example, a fabric which

is 50 percent polyester and 50 percent cotton is classified as polyester.

Fabrics which are 95 percent or more of one fiber are not considered blends. Such fabrics are included in the 100 percent classification for that fiber.

#### Units of Quantity

Production is reported in thousands of linear yards except as follows:

Blanketing--In thousands of linear yards, 72 inch width or equivalent.

Selected items in thousands of pounds as noted.

Production--Represents total production of cotton fabrics by all known weaving mills regardless of their primary activity.

Looms Operating--Represents number of looms operating on the specific fabrics at end of quarter.

Yarns Consumed Loom Hours, and Stocks of Selected Filament Yarns--Represents data for all mills primarily producing cotton broadwoven fabrics.

Revision to mill assignment data --Information on loom hours, yarn consumption, and stocks shown in tables 3, 4, and 5 are not comparable with information prior to third quarter 1972 because of the reclassification of particular mills whose primary activity is now the weaving of manmade fiber fabrics rather than cotton fabrics. An overlap between the old and new mill assignment is available by comparing the preliminary and revised third quarter data as published in this series. It should be noted that the combination of data shown in this series (MQ-22T.1) and the manmade fiber broadwoven goods report (MQ-22T.2) for yarns consumed by type of mill, loom hours, and stocks are comparable.

#### **SEASONAL ADJUSTMENT**

This report presents seasonally adjusted data for a number of the most important series published quarterly in Current Industrial Reports Series MQ-22T.1, Cotton Broadwoven Gray Goods. The seasonal adjustment program largely eliminates the effect of normal seasonal variation (including variations due to vacations, weather, etc.) as measured over the time period for which data were used. The resulting information thus provides a better measure than the original data of the quarter-to-quarter variations which are due to factors that are not associated with a repetitive seasonal pattern.

# Now Available — Selected Research Packages In 10 Environmental Areas

Ten information packages covering selected research projects in environmental management are now available to you at special rates from NTIS and the Smithsonian Institution's Science Information Exchange.

Each customized NTISearch generally costs \$25. And each computer search by SIE is \$50. But these ten searches were recently produced for a private organization. And now you can have this important information package for much less.

More than 100,000 notices of research proposals and current projects, covering all fields of basic and applied science, are registered by SIE every year and computerized for storage and retrieval. NTIS adds annually over 60,000 new reports of government-funded research in science, technology and business to its computerized file.

Notices of current research appear on one side of a standard 8½ x 11 form. It shows the supporting agency, the title of the project, the names of the principal investigators and their associates and their scientific specialty, the recipient institution, the funds allotted and the fiscal year the project falls in, and provides a brief description of project objectives.

Each NTIS abstract is copied on one side of a 4 x 6 reference card. It shows the report title, date, corporate and personal author, number of pages, accession number for ordering and the abstract.

**Environmental Problems Specific to Urban Areas** (74 ongoing projects, \$35; 65 completed projects, \$20).

**Conversion of Coal to Synthetic Fuels** (31 ongoing projects, \$35; 40 completed projects, \$20).

**Nitrogen Oxides In Air Pollution** (113 ongoing projects, \$45; 55 completed projects, \$20).

**Economic Incentives for Pollution Control:** economic benefits from improved water quality; pollution charges and costs; economic feasibility of pollution control techniques (70 ongoing projects, \$35; 45 completed projects, \$20).

**Water Rights Studies:** includes water rights doctrine, appropriations, doctrine, zoning, regulatory laws, easements, riparian rights, permits, and legal conflicts for fresh and marine waters (61 ongoing projects, \$35; 42 completed projects, \$20).

**Mathematical Modeling as a Technique in Water Pollution Control:** the application or development of various numeric, statistical, digital, or generalized math models for analysis of water quality problems (57 ongoing projects, \$35; 50 completed projects, \$20).

**Textile Processing Wastes** (23 ongoing projects, \$35; 15 completed projects, \$20).

**Metal Processing Wastes** (43 ongoing projects, \$35; 40 completed projects, \$20).

**Chemical Processing Wastes:** treatment and disposal of chemical waste water from manufacturers, such as petroleum, pesticide, polymer, etc. (60 ongoing projects, \$35; 53 completed projects, \$20).

**Automobile Exhaust and Emission:** air pollution reduction from gasoline or diesel powered vehicles; monitoring and analysis of combustion products; and alternate low-emission engine systems (154 ongoing projects, \$45; 70 completed projects, \$20).

Mail now to: **NATIONAL TECHNICAL INFORMATION SERVICE**  
U.S. Department of Commerce  
Springfield, Va. 22151

Please send notices of research projects and/or abstracts in the areas I have checked, at \$20 for NTIS abstracts and \$35 per subject area for SIE notices (\$45 if more than 100 notices per search).

## CURRENT INDUSTRIAL REPORTS

## Cotton Broadwoven Gray Goods

Second Quarter 1973

U. S. DEPARTMENT OF COMMERCE • Social and Economic Statistics Administration • BUREAU OF THE CENSUS

September 1973

SERIES: MQ-22T.1(73)-2

The statistics in this publication are based on a survey of manufacturers and represent the entire U.S. production of cotton broadwoven gray fabrics over 12 inches in width. Estimates are included for companies whose reports were not received in time for tabulation. A more complete description of the survey appears on pages 9 and 10.

## DESCRIPTION OF SURVEY

The statistics in this publication and in the other MQ-22T reports were collected on Census Form MQ-22T, Broad Fabrics (Except Knit): Woven, Nonwoven, and Felts, from a panel of approximately 650 producers who account for about 95 percent of the total production. Estimates are included in the published figures for an additional 150 small producers reporting annually.

The current quarter's figures may also include estimates for respondents whose reports were not received in time for tabulation. Such missing figures are imputed from the quarter-to-quarter movements shown by reporting firms and are generally limited to a maximum of 10 percent to any one item. Individual items with higher imputation rates are footnoted.

The imputation rate is not an explicit indicator of the potential error in published figures due to nonresponse, because the actual quarterly movements for nonrespondents may or may not closely agree with the imputed movements. The probable range of difference between the actual and imputed figures is unknown. The degree of uncertainty regarding the accuracy of the data, however, increases as the percentage of imputation increases. Figures with high imputation rates, therefore, should be used with caution.

Statistics for previous quarters may be revised, due to receipt of corrected data from respondents, including late reports for which estimates were made, and other corrections. Figures which were revised significantly are indicated by footnotes.

The data in this report are not adjusted for number of working days.

## RELATED REPORTS

The following is a list of selected current and recent special textile reports published by the Census Bureau in the Current Industrial Reports series:

Series No.	Title	Frequency
M22A	Woven Fabrics--Production, Inventories, and Unfilled Orders	Monthly
M22D	Consumption on the Woolen and Worsted Systems	Monthly
M22P	Cotton, Manmade Fiber Staple, and Linters--Consumption, Stocks, and Spindle Activity	Monthly

MQ-22K	Shipments of Knit Cloth, including Interplant Transfers	Quarterly
MA-22F	Yarn Production	Annual
MA-22G	Narrow Fabrics	Annual
MA-22S	Broadwoven Fabrics Finished	Annual
MA-22H	Nonwoven Fabrics	Annual
MA-23X	Sheets, Pillowcases, and Towels	Annual

## SPECIAL TEXTILE REPORTS

At intervals of a few years, special supplemental reports on broadwoven fabrics are also published. Recent reports of this type are:

Series	Title	Period Covered
M22T Supp.	Broadwoven Fabrics--Blends and Mixtures	1965
M22T Supp.	Broadwoven Fabrics, Average Weight and Width of Fabric (Cotton, Manmade Fiber, and Wool Fabrics)	First Quarter 1972
M22T-1 Supp.	Broad Fabric Weaving Looms in Place by Type and Width	1964

## EXPLANATION OF TERMS

Cotton Fabrics--Wholly or chiefly by weight of cotton.

### Blends and Mixtures

Fabrics made from more than one fiber are classified in the same way as other fabrics, i.e., according to whether the fabric is chiefly cotton, wool, or manmade fiber. As examples, a fabric which is 55 percent cotton and 45 percent rayon is classified in the cotton section; a fabric which is 40 percent cotton, 30 percent rayon, and 30 percent acetate is classified in the manmade fibers section.

Blends and mixtures which are by weight 50 percent of one fiber and 10 percent of another fiber are classified according to the fiber of greatest value. As an example, a fabric which

is 50 percent polyester and 50 percent cotton is classified as polyester.

Fabrics which are 95 percent or more of one fiber are not considered blends. Such fabrics are included in the 100 percent classification for that fiber.

#### Units of Quantity

Production is reported in thousands of linear yards except as follows:

Blanketing--In thousands of linear yards, 72 inch width or equivalent.

Selected items in thousands of pounds as noted.

Production--Represents total production of cotton fabrics by all known weaving mills regardless of their primary activity.

Looms Operating--Represents number of looms operating on the specific fabrics at end of quarter.

Yarns Consumed Loom Hours, and Stocks of Selected Filament Yarns--Represents data for all mills primarily producing cotton broadwoven fabrics.

Revision to mill assignment data--Information on loom hours, yarn consumption, and stocks shown in tables 3, 4, and 5 are not comparable with information prior to third quarter 1972 because of the reclassification of particular mills whose primary activity is now the weaving of manmade fiber fabrics rather than cotton fabrics. An overlap between the old and new mill assignment is available by comparing the preliminary and revised third quarter data as published in this series. It should be noted that the combination of data shown in this series (MQ-22T.1) and the manmade fiber broadwoven goods report (MQ-22T.2) for yarns consumed by type of mill, loom hours, and stocks are comparable.

#### **SEASONAL ADJUSTMENT**

This report presents seasonally adjusted data for a number of the most important series published quarterly in Current Industrial Reports Series MQ-22T.1, Cotton Broadwoven Gray Goods. The seasonal adjustment program largely eliminates the effect of normal seasonal variation (including variations due to vacations, weather, etc.) as measured over the time period for which data were used. The resulting information thus provides a better measure than the original data of the quarter-to-quarter variations which are due to factors that are not associated with a repetitive seasonal pattern.

## Cotton Broadwoven Gray Goods

Third Quarter 1973

U. S. DEPARTMENT OF COMMERCE • Social and Economic Statistics Administration • BUREAU OF THE CENSUS

January 1974

SERIES: MQ-22T.1(73)-3

The statistics in this publication are based on a survey of manufacturers and represent the entire U.S. production of cotton broadwoven gray fabrics over 12 inches in width. Estimates are included for companies whose reports were not received in time for tabulation. A more complete description of the survey appears on pages 9 and 10.

## DESCRIPTION OF SURVEY

The statistics in this publication and in the other MQ-22T reports were collected on Census Form MQ-22T, Broad Fabrics (Except Knit): Woven, Nonwoven, and Felts, from a panel of approximately 650 producers who account for about 95 percent of the total production. Estimates are included in the published figures for an additional 150 small producers reporting annually.

The current quarter's figures may also include estimates for respondents whose reports were not received in time for tabulation. Such missing figures are imputed from the quarter-to-quarter movements shown by reporting firms and are generally limited to a maximum of 10 percent to any one item. Individual items with higher imputation rates are footnoted.

The imputation rate is not an explicit indicator of the potential error in published figures due to nonresponse, because the actual quarterly movements for nonrespondents may or may not closely agree with the imputed movements. The probable range of difference between the actual and imputed figures is unknown. The degree of uncertainty regarding the accuracy of the data, however, increases as the percentage of imputation increases. Figures with high imputation rates, therefore, should be used with caution.

Statistics for previous quarters may be revised, due to receipt of corrected data from respondents, including late reports for which estimates were made, and other corrections. Figures which were revised significantly are indicated by footnotes.

The data in this report are not adjusted for number of working days.

## RELATED REPORTS

The following is a list of selected current and recent special textile reports published by the Census Bureau in the Current Industrial Reports series:

Series No.	Title	Frequency
M22A	Woven Fabrics--Production, Inventories, and Unfilled Orders	Monthly
M22D	Consumption on the Woolen and Worsted Systems	Monthly
M22P	Cotton, Manmade Fiber Staple, and Linters--Consumption, Stocks, and Spindle Activity	Monthly

MQ-22K	Shipments of Knit Cloth, including Interplant Transfers	Quarterly
MA-22F	Yarn Production	Annual
MA-22G	Narrow Fabrics	Annual
MA-22S	Broadwoven Fabrics Finished	Annual
MA-22H	Nonwoven Fabrics	Annual
MA-23X	Sheets, Pillowcases, and Towels	Annual

## SPECIAL TEXTILE REPORTS

At intervals of a few years, special supplemental reports on broadwoven fabrics are also published. Recent reports of this type are:

Series	Title	Period Covered
M22T Supp.	Broadwoven Fabrics--Blends and Mixtures	1965
M22T Supp.	Broadwoven Fabrics, Average Weight and Width of Fabric (Cotton, Manmade Fiber, and Wool Fabrics)	First Quarter 1972
M22T-1 Supp.	Broad Fabric Weaving Looms in Place by Type and Width	1964

## EXPLANATION OF TERMS

Cotton Fabrics--Wholly or chiefly by weight of cotton.

### Blends and Mixtures

Fabrics made from more than one fiber are classified in the same way as other fabrics, i.e., according to whether the fabric is chiefly cotton, wool, or manmade fiber. As examples, a fabric which is 55 percent cotton and 45 percent rayon is classified in the cotton section; a fabric which is 40 percent cotton, 30 percent rayon, and 30 percent acetate is classified in the manmade fibers section.

Blends and mixtures which are by weight 50 percent of one fiber and 10 percent of another fiber are classified according to the fiber of greatest value. As an example, a fabric which

is 50 percent polyester and 50 percent cotton is classified as polyester.

Fabrics which are 95 percent or more of one fiber are not considered blends. Such fabrics are included in the 100 percent classification for that fiber.

#### Units of Quantity

Production is reported in thousands of linear yards except as follows:

Blanketing--In thousands of linear yards, 72 inch width or equivalent.

Selected items in thousands of pounds as noted.

Production--Represents total production of cotton fabrics by all known weaving mills regardless of their primary activity.

Looms Operating--Represents number of looms operating on the specific fabrics at end of quarter.

Yarns Consumed Loom Hours, and Stocks of Selected Filament Yarns--Represents data for all mills primarily producing cotton broadwoven fabrics.

Revision to mill assignment data--Information on loom hours, yarn consumption, and stocks shown in tables 3, 4, and 5 are not comparable with information prior to third quarter 1972 because of the reclassification of particular mills whose primary activity is now the weaving of manmade fiber fabrics rather than cotton fabrics. An overlap between the old and new mill assignment is available by comparing the preliminary and revised third quarter data as published in this series. It should be noted that the combination of data shown in this series (MQ-22T.1) and the manmade fiber broadwoven goods report (MQ-22T.2) for yarns consumed by type of mill, loom hours, and stocks are comparable.

#### **SEASONAL ADJUSTMENT**

This report presents seasonally adjusted data for a number of the most important series published quarterly in Current Industrial Reports Series MQ-22T.1, Cotton Broadwoven Gray Goods. The seasonal adjustment program largely eliminates the effect of normal seasonal variation (including variations due to vacations, weather, etc.) as measured over the time period for which data were used. The resulting information thus provides a better measure than the original data of the quarter-to-quarter variations which are due to factors that are not associated with a repetitive seasonal pattern.

# THE 1972 ECONOMIC CENSUSES

Early in 1972...we asked the business community's help in providing us with the basic information about its business activities during the year 1972. The facts were requested so that we, in turn, could provide YOU with the data from various economic areas! NOW - the results are in! They're being analyzed...fed to computers...and published for YOUR use....YOUR needs...YOUR advantage in keeping up with the latest trends in the business and industrial worlds.

There are hundreds of reports coming off the press as fast as figures are tabulated.

Get the facts! Have your name placed on our mailing lists to receive a copy of the Publications Programs and publications order forms (free of charge), which describe the contents of the reports and the scheduled release dates. Please fill in your name and address, check the appropriate boxes below, and mail to:

## Cotton Broadwoven Gray Goods

Fourth Quarter 1973

April 1974

SERIES: MQ-22T.1(73)-4

The statistics in this publication are based on a survey of manufacturers and represent the entire U.S. production of cotton broadwoven gray fabrics over 12 inches in width. Estimates are included for companies whose reports were not received in time for tabulation. A more complete description of the survey appears on pages 9 and 10.

## DESCRIPTION OF SURVEY

The statistics in this publication and in the other MQ-22T reports were collected on Census Form MQ-22T, Broad Fabrics (Except Knit): Woven, Nonwoven, and Felts, from a panel of approximately 650 producers who account for about 95 percent of the total production. Estimates are included in the published figures for an additional 150 small producers reporting annually.

The current quarter's figures may also include estimates for respondents whose reports were not received in time for tabulation. Such missing figures are imputed from the quarter-to-quarter movements shown by reporting firms and are generally limited to a maximum of 10 percent to any one item. Individual items with higher imputation rates are footnoted.

The imputation rate is not an explicit indicator of the potential error in published figures due to nonresponse, because the actual quarterly movements for nonrespondents may or may not closely agree with the imputed movements. The probable range of difference between the actual and imputed figures is unknown. The degree of uncertainty regarding the accuracy of the data, however, increases as the percentage of imputation increases. Figures with high imputation rates, therefore, should be used with caution.

Statistics for previous quarters may be revised, due to receipt of corrected data from respondents, including late reports for which estimates were made, and other corrections. Figures which were revised significantly are indicated by footnotes.

The data in this report are not adjusted for number of working days.

## RELATED REPORTS

The following is a list of selected current and recent special textile reports published by the Census Bureau in the Current Industrial Reports series:

Series No.	Title	Frequency
M22A	Woven Fabrics--Production, Inventories, and Unfilled Orders	Monthly
M22D	Consumption on the Woolen and Worsted Systems	Monthly
M22P	Cotton, Manmade Fiber Staple, and Linters--Consumption, Stocks, and Spindle Activity	Monthly

MQ-22K	Shipments of Knit Cloth, including Interplant Transfers	Quarterly
MA-22F	Yarn Production	Annual
MA-22G	Narrow Fabrics	Annual
MA-22S	Broadwoven Fabrics Finished	Annual
MA-22H	Nonwoven Fabrics	Annual
MA-23X	Sheets, Pillowcases, and Towels	Annual

## SPECIAL TEXTILE REPORTS

At intervals of a few years, special supplemental reports on broadwoven fabrics are also published. Recent reports of this type are:

Series	Title	Period Covered
M22T Supp.	Broadwoven Fabrics--Blends and Mixtures	1965
M22T Supp.	Broadwoven Fabrics, Average Weight and Width of Fabric (Cotton, Manmade Fiber, and Wool Fabrics)	First Quarter 1972
M22T-1 Supp.	Broad Fabric Weaving Looms in Place by Type and Width	1964

## EXPLANATION OF TERMS

Cotton Fabrics--Wholly or chiefly by weight of cotton.

### Blends and Mixtures

Fabrics made from more than one fiber are classified in the same way as other fabrics, i.e., according to whether the fabric is chiefly cotton, wool, or manmade fiber. As examples, a fabric which is 55 percent cotton and 45 percent rayon is classified in the cotton section; a fabric which is 40 percent cotton, 30 percent rayon, and 30 percent acetate is classified in the manmade fibers section.

Blends and mixtures which are by weight 50 percent of one fiber and 10 percent of another fiber are classified according to the fiber of greatest value. As an example, a fabric which

is 50 percent polyester and 50 percent cotton is classified as polyester.

Fabrics which are 95 percent or more of one fiber are not considered blends. Such fabrics are included in the 100 percent classification for that fiber.

#### Units of Quantity

Production is reported in thousands of linear yards except as follows:

Blanketing--In thousands of linear yards, 72 inch width or equivalent.

Selected items in thousands of pounds as noted.

Production--Represents total production of cotton fabrics by all known weaving mills regardless of their primary activity.

Looms Operating--Represents number of looms operating on the specific fabrics at end of quarter.

Yarns Consumed Loom Hours, and Stocks of Selected Filament Yarns--Represents data for all mills primarily producing cotton broadwoven fabrics.

Revision to mill assignment data --Information on loom hours, yarn consumption, and stocks shown in tables 3, 4, and 5 are not comparable with information prior to third quarter 1972 because of the reclassification of particular mills whose primary activity is now the weaving of manmade fiber fabrics rather than cotton fabrics. An overlap between the old and new mill assignment is available by comparing the preliminary and revised third quarter data as published in this series. It should be noted that the combination of data shown in this series (MQ-22T.1) and the manmade fiber broadwoven goods report (MQ-22T.2) for yarns consumed by type of mill, loom hours, and stocks are comparable.

#### **SEASONAL ADJUSTMENT**

This report presents seasonally adjusted data for a number of the most important series published quarterly in Current Industrial Reports Series MQ-22T.1, Cotton Broadwoven Gray Goods. The seasonal adjustment program largely eliminates the effect of normal seasonal variation (including variations due to vacations, weather, etc.) as measured over the time period for which data were used. The resulting information thus provides a better measure than the original data of the quarter-to-quarter variations which are due to factors that are not associated with a repetitive seasonal pattern.

# THE 1972 ECONOMIC CENSUSES

Early in 1972...we asked the business community's help in providing us with the basic information about its business activities during the year 1972. The facts were requested so that we, in turn, could provide YOU with the data from various economic areas! NOW - the results are in! They're being analyzed...fed to computers...and published for YOUR use....YOUR needs...YOUR advantage in keeping up with the latest trends in the business and industrial worlds.

There are hundreds of reports coming off the press as fast as figures are tabulated.

Get the facts! Have your name placed on our mailing lists to receive a copy of the Publications Programs and publications order forms (free of charge), which describe the contents of the reports and the scheduled release dates. Please fill in your name and address, check the appropriate boxes below, and mail to:

# Cotton Broadwoven Gray Goods

## Summary for 1973

Issued July 1974

SERIES: MQ-22T, (73)-5

The data shown in this report summarize the information published in the quarterly MQ-22T.1 series. Any revisions made to quarterly data previously published in this series are noted.

### DESCRIPTION OF SURVEY

The statistics in this publication were published in Census quarterly series MQ-22T.1 Cotton Broadwoven Gray Goods, from a sample of mills accounting for approximately 98 percent of the total U.S. production of cotton broadwoven goods. Estimates have been included for manufacturers whose reports were not received and are based on their production as reported in the 1972 annual survey.

The data in this report are not adjusted for seasonal variation or number of working days.

### COVERAGE

The information contained in this report is collected on Census quarterly form MQ-22T, "Broad Fabrics (Except Knit): Woven, Nonwoven, and Felts." A separate report is requested from each mill, although in some instances the "mill" reported as one unit to the Census Bureau constitutes more than one location.

Fabrics woven on commission are reported in this series by the commission mill, not by the company for which the work is contracted.

### COVERAGE OF INDIVIDUAL TABLES

The production figures shown in tables 1 and 2

represent total production of the specified fabrics by all weaving mills regardless of their primary activity. However, because a single report is collected from an individual mill, the information shown in tables 3, 4, 5, and 6 relates to the entire activity of all mills primarily producing cotton fabrics. Insofar as these mills produced other fabrics (manmade fiber or wool) as a secondary product, the yarn consumption or loom activity for such fabrics would be included in this report. Similarly, the yarns consumed in the manufacture of cotton fabrics produced as a secondary product in a mill primarily producing manmade fiber fabrics is excluded from this report and included in the Current Industrial Reports publication relating to manmade fiber broadwoven fabrics.

### WOOLEN AND WORSTED MILLS

Mills with woolen and worsted machinery which primarily produce manmade fiber fabrics do not report yarn consumption data. Separate data on knit cloth are published by the Bureau of the Census in quarterly series MQ-22K, Shipments of Knit Cloth, Including Interplant Transfers, beginning with the fourth quarter 1966. Data are available upon request.

### DEFINITION OF TERMS

Broad Fabrics--Fabric over 12" in width, as made.

Cotton Fabrics--Includes fabric wholly or chiefly by weight of cotton.

Blends, Chiefly Cotton--Includes fabrics chiefly by weight of cotton and containing other fibers, such as nylon, polyester, etc.

Inquiries concerning these figures should be addressed to the U.S. Department of Commerce, Bureau of the Census, Industry Division, Washington, D.C. 20233.

U.S. DEPARTMENT OF COMMERCE | Social and Economic Statistics Administration | BUREAU OF THE CENSUS

For sale by the Subscriber Services Section (Publications), Social and Economic Statistics Administration, Washington, D.C. 20233 or any Department of Commerce District Office. Price: 25 cents per copy--\$1.00 per year.

**Blends and Mixtures**--Fabrics which are made from more than one fiber are classified according to whether the fabric is chiefly cotton, wool, or manmade fiber. As examples, a fabric made of 55 percent cotton and 45 percent rayon is included in the cotton report; a fabric which is 40 percent cotton, 30 percent rayon, and 30 percent acetate is classified in the manmade fibers report. Blends and mixtures which are by weight 50 percent of one fiber and 50 percent of another fiber are classified according to the fiber of greatest value. As an example, a fabric which is 50 percent polyester and 50 percent cotton is classified as polyester. Fabrics which are 95 percent or more of one fiber are included in the 100 percent classification for that fiber.

MQ-22T.1	Broadwoven Fabrics, Average Weight and Width of Fabric (Cotton, Man- made Fiber, and Wool Fabrics)	First Quarter 1972
MQ-22T.1 Supp.	Broad Fabric Weaving Looms in Place by Type and Width	1964

### ACKNOWLEDGMENTS

This report was prepared in the Industry Division, Bureau of the Census, under the direction of Robert J. Nealon, Chief, Foods, Textiles, and Apparel. Charles T. Lee was directly responsible for the review of the data and preparation of the report. Elmer S. Biles, Chief of the Division, and Conrad J. Jacob, Assistant Division Chief for Commodity and Industry Programs, provided overall direction and coordination to this project.

### SPECIAL TEXTILE REPORTS

At intervals of a few years, special supplemental reports on broadwoven fabrics are also published. Recent reports of this type are:

Table 1. SUMMARY OF PRODUCTION, BY CLASS OF FABRIC: 1962 TO 1973

(Millions of linear yards)

Year	Cotton broadwoven goods total <sup>1</sup>	Duck and allied fabrics	Sheeting and allied coarse and medium yarn fabrics	Print cloth yarn fabrics	Carded colored yarn fabrics	Towels, toweling, and dishcloths	Napped fabrics, blankets, and blanketing	Fine cotton fabrics	Other woven cotton fabrics and specialties
1973.....	5,085.6	157.1	1,252.5	1,967.5	481.5	553.3	123.7	130.2	419.8
1972.....	5,665.9	150.5	1,500.9	2,135.9	473.1	590.1	135.2	173.2	507.0
1971.....	6,148.8	183.8	1,741.2	2,355.0	438.6	563.3	126.0	201.5	539.5
1970.....	6,245.9	207.5	1,803.5	2,391.8	389.3	566.2	131.9	312.6	443.0
1969.....	6,968.0	274.6	1,969.6	2,748.4	319.0	590.9	143.4	474.9	447.4
1968.....	7,476.7	270.9	2,169.3	2,778.0	326.4	619.7	143.2	716.9	452.3
1967.....	8,278.1	277.9	2,545.1	2,871.7	380.6	623.8	152.3	944.5	482.2
1966.....	8,839.9	284.7	2,654.6	3,063.0	425.1	655.8	153.9	1,151.3	451.5
1965.....	9,237.8	247.9	2,634.9	3,119.6	478.6	712.5	176.2	1,405.4	462.6
1964.....	8,966.2	233.7	2,528.7	2,963.4	495.0	657.7	165.1	1,446.8	475.7
1963.....	8,759.3	212.8	2,394.4	2,979.5	435.9	617.6	150.0	1,519.9	449.3
1962.....	9,248.5	226.2	2,554.9	3,186.6	425.7	616.1	173.0	1,624.3	441.9

<sup>1</sup>Figures may not add to total because of independent rounding.

Table 2.--PRODUCTION OF COTTON BROADWOVEN FABRICS

(Thousands of linear yards)

Product code	Type of fabric	1973				
		Total	October-December	July-September	April-June	January-March
	COTTON BROADWOVEN GOODS.....	5,085,684	1,225,789	1,159,537	1,323,974	1,376,784

## Cotton Broadwoven Gray Goods

First Quarter 1974

Issued July 1974

SERIES: MQ-22T.1(74)-1

The statistics in this publication are based on a survey of manufacturers and represent the entire U.S. production of cotton broadwoven gray fabrics over 12 inches in width. Estimates are included for companies whose reports were not received in time for tabulation. A more complete description of the survey appears on pages 9 and 10.

TABLE 1A.--SUMMARY OF SEASONALLY ADJUSTED PRODUCTION DATA, BY CLASS OF FABRIC: 1969 TO 1974

Note: TABLE 5. STOCKS OF SELECTED FILAMENT YARNS AT COTTON MILLS has been discontinued with the publication of the first quarter, 1974, MQ22T.1, Cotton Broadwoven Fabrics report.

<sup>1</sup>10 to 25 percent of this item is imputed. (See description of survey for a discussion of imputation rates.)

<sup>2</sup>25 to 50 percent of this item is imputed. (See description of survey for a discussion of imputation rates.)

## DESCRIPTION OF SURVEY

The statistics in this publication and in the other MQ-22T reports were collected on Census Form MQ-22T, Broad Fabrics (Except Knit): Woven, Nonwoven, and Felts, from a panel of approximately 650 producers who account for about 95 percent of the total production. Estimates are included in the published figures for an additional 150 small producers reporting annually.

The current quarter's figures may also include estimates for respondents whose reports were not received in time for tabulation. Such missing figures are imputed from the quarter-to-quarter movements shown by reporting firms and are generally limited to a maximum of 10 percent to any one item. Individual items with higher imputation rates are footnoted.

The imputation rate is not an explicit indicator of the potential error in published figures due to nonresponse, because the actual quarterly movements for nonrespondents may or may not closely agree with the imputed movements. The probable range of difference between the actual and imputed figures is unknown. The degree of uncertainty regarding the accuracy of the data, however, increases as the percentage of imputation increases. Figures with high imputation rates, therefore, should be used with caution.

Statistics for previous quarters may be revised, due to receipt of corrected data from respondents, including late reports for which estimates were made, and other corrections. Figures which were revised significantly are indicated by footnotes.

The data in this report are not adjusted for number of working days.

## RELATED REPORTS

The following is a list of selected current and recent special textile reports published by the Census Bureau in the Current Industrial Reports series:

<u>Series No.</u>	<u>Title</u>	<u>Frequency</u>
M22A	Woven Fabrics--Production, Inventories, and Unfilled Orders	Monthly
M22D	Consumption on the Woolen and Worsted Systems	Monthly
M22P	Cotton, Manmade Fiber Staple, and Linters--Consumption, Stocks, and Spindle Activity	Monthly

MQ-22K	Shipments of Knit Cloth, including Interplant Transfers	Quarterly
MA-22F	Yarn Production	Annual
MA-22G	Narrow Fabrics	Annual
MA-22S	Broadwoven Fabrics Finished	Annual
MA-22H	Nonwoven Fabrics	Annual
MA-23X	Sheets, Pillowcases, and Towels	Annual

## SPECIAL TEXTILE REPORTS

At intervals of a few years, special supplemental reports on broadwoven fabrics are also published. Recent reports of this type are:

<u>Series</u>	<u>Title</u>	<u>Period Covered</u>
M22T Supp.	Broadwoven Fabrics--Blends and Mixtures	1965
M22T Supp.	Broadwoven Fabrics, Average Weight and Width of Fabric (Cotton, Manmade Fiber, and Wool Fabrics)	First Quarter 1972
M22T-1 Supp.	Broad Fabric Weaving Looms in Place by Type and Width	1964

## EXPLANATION OF TERMS

Cotton Fabrics--Wholly or chiefly by weight of cotton.

### Blends and Mixtures

Fabrics made from more than one fiber are classified in the same way as other fabrics, i.e., according to whether the fabric is chiefly cotton, wool, or manmade fiber. As examples, a fabric which is 55 percent cotton and 45 percent rayon is classified in the cotton section; a fabric which is 40 percent cotton, 30 percent rayon, and 30 percent acetate is classified in the manmade fibers section.

Blends and mixtures which are by weight 50 percent of one fiber and 10 percent of another fiber are classified according to the fiber of greatest value. As an example, a fabric which

is 50 percent polyester and 50 percent cotton is classified as polyester.

Fabrics which are 95 percent or more of one fiber are not considered blends. Such fabrics are included in the 100 percent classification for that fiber.

#### Units of Quantity

Production is reported in thousands of linear yards except as follows:

Blanketing--In thousands of linear yards, 72 inch width or equivalent.

Selected items in thousands of pounds as noted.

Production--Represents total production of cotton fabrics by all known weaving mills regardless of their primary activity.

Looms Operating--Represents number of looms operating on the specific fabrics at end of quarter.

Yarns Consumed Loom Hours, and Stocks of Selected Filament Yarns--Represents data for all mills primarily producing cotton broadwoven fabrics.

Revision to mill assignment data -- Information on loom hours, yarn consumption, and stocks shown in tables 3, 4, and 5 are not comparable with information prior to third quarter 1972 because of the reclassification of particular mills whose primary activity is now the weaving of manmade fiber fabrics rather than cotton fabrics. An overlap between the old and new mill assignment is available by comparing the preliminary and revised third quarter data as published in this series. It should be noted that the combination of data shown in this series (MQ-22T.1) and the manmade fiber broadwoven goods report (MQ-22T.2) for yarns consumed by type of mill, loom hours, and stocks are comparable.

#### **SEASONAL ADJUSTMENT**

This report presents seasonally adjusted data for a number of the most important series published quarterly in Current Industrial Reports Series MQ-22T.1, Cotton Broadwoven Gray Goods. The seasonal adjustment program largely eliminates the effect of normal seasonal variation (including variations due to vacations, weather, etc.) as measured over the time period for which data were used. The resulting information thus provides a better measure than the original data of the quarter-to-quarter variations which are due to factors that are not associated with a repetitive seasonal pattern.

## to the 1972 Economic Censuses

With hundreds of reports on the economic censuses now coming off the press, the MINI-GUIDE is designed as YOUR guide through the thousands of available facts, providing concise and handy information on the publications YOU want.

Geared for potential users of Census Bureau data, as well as for experienced users, **MINI-GUIDE** chapters provide useful information and references on:

- General information on the 1972 Economic Censuses
- Data collected and publication programs for the individual economic censuses
- Geographic areas for which data are available
- The Standard Industrial Classification System

The economic censuses conducted by the Bureau of the Census are a major source of information about the structure and function of the Nation's economy. Let the **MINI-GUIDE** serve as your introduction to each of the nine economic census programs listed below:

- Retail Trade*
- Selected Service Industries*
- Wholesale Trade*
- Construction Industries*
- Manufactures*
- Mineral Industries*

Transportation  
Enterprise Statistics  
Outlying Areas

For a valuable reference and guide to the economic censuses, the **MINI-GUIDE TO THE 1972 ECONOMIC CENSUSES** may now be ordered from the Publications Distribution Section, Social and Economic Statistics Administration, Washington, D.C. 20233.

44 pages at \$1.00

## Cotton Broadwoven Gray Goods

Second Quarter 1974

Issued September 1974

SERIES: MQ-22T.1(74)-2

The statistics in this publication are based on a survey of manufacturers and represent the entire U.S. production of cotton broadwoven gray fabrics over 12 inches in width. Estimates are included for companies whose reports were not received in time for tabulation. A more complete description of the survey appears on pages 9 and 10.

TABLE 1A.--SUMMARY OF SEASONALLY ADJUSTED PRODUCTION DATA, BY CLASS OF FABRIC: 1969 TO 1974

(Millions of linear yards)

## DESCRIPTION OF SURVEY

The statistics in this publication and in the other MQ-22T reports were collected on Census Form MQ-22T, Broad Fabrics (Except Knit): Woven, Nonwoven, and Felts, from a panel of approximately 650 producers who account for about 95 percent of the total production. Estimates are included in the published figures for an additional 150 small producers reporting annually.

The current quarter's figures may also include estimates for respondents whose reports were not received in time for tabulation. Such missing figures are imputed from the quarter-to-quarter movements shown by reporting firms and are generally limited to a maximum of 10 percent to any one item. Individual items with higher imputation rates are footnoted.

The imputation rate is not an explicit indicator of the potential error in published figures due to nonresponse, because the actual quarterly movements for nonrespondents may or may not closely agree with the imputed movements. The probable range of difference between the actual and imputed figures is unknown. The degree of uncertainty regarding the accuracy of the data, however, increases as the percentage of imputation increases. Figures with high imputation rates, therefore, should be used with caution.

Statistics for previous quarters may be revised, due to receipt of corrected data from respondents, including late reports for which estimates were made, and other corrections. Figures which were revised significantly are indicated by footnotes.

The data in this report are not adjusted for number of working days.

## RELATED REPORTS

The following is a list of selected current and recent special textile reports published by the Census Bureau in the Current Industrial Reports series:

<u>Series No.</u>	<u>Title</u>	<u>Frequency</u>
M22A	Woven Fabrics--Production, Inventories, and Unfilled Orders	Monthly
M22D	Consumption on the Woolen and Worsted Systems	Monthly
M22P	Cotton, Manmade Fiber Staple, and Linters--Consumption, Stocks, and Spindle Activity	Monthly

MQ-22K	Shipments of Knit Cloth, including Interplant Transfers	Quarterly
MA-22F	Yarn Production	Annual
MA-22G	Narrow Fabrics	Annual
MA-22S	Broadwoven Fabrics Finished	Annual
MA-22H	Nonwoven Fabrics	Annual
MA-23X	Sheets, Pillowcases, and Towels	Annual

## SPECIAL TEXTILE REPORTS

At intervals of a few years, special supplemental reports on broadwoven fabrics are also published. Recent reports of this type are:

<u>Series</u>	<u>Title</u>	<u>Period Covered</u>
M22T Supp.	Broadwoven Fabrics--Blends and Mixtures	1965
M22T Supp.	Broadwoven Fabrics, Average Weight and Width of Fabric (Cotton, Manmade Fiber, and Wool Fabrics)	First Quarter 1972
M22T-1 Supp.	Broad Fabric Weaving Looms in Place by Type and Width	1964

## EXPLANATION OF TERMS

Cotton Fabrics--Wholly or chiefly by weight of cotton.

### Blends and Mixtures

Fabrics made from more than one fiber are classified in the same way as other fabrics, i.e., according to whether the fabric is chiefly cotton, wool, or manmade fiber. As examples, a fabric which is 55 percent cotton and 45 percent rayon is classified in the cotton section; a fabric which is 40 percent cotton, 30 percent rayon, and 30 percent acetate is classified in the manmade fibers section.

Blends and mixtures which are by weight 50 percent of one fiber and 10 percent of another fiber are classified according to the fiber of greatest value. As an example, a fabric which

is 50 percent polyester and 50 percent cotton is classified as polyester.

Fabrics which are 95 percent or more of one fiber are not considered blends. Such fabrics are included in the 100 percent classification for that fiber.

#### Units of Quantity

Production is reported in thousands of linear yards except as follows:

Blanketing--In thousands of linear yards, 72 inch width or equivalent.

Selected items in thousands of pounds as noted.

Production--Represents total production of cotton fabrics by all known weaving mills regardless of their primary activity.

Looms Operating--Represents number of looms operating on the specific fabrics at end of quarter.

Yarns Consumed Loom Hours, and Stocks of Selected Filament Yarns--Represents data for all mills primarily producing cotton broadwoven fabrics.

Revision to mill assignment data--Information on loom hours, yarn consumption, and stocks shown in tables 3, 4, and 5 are not comparable with information prior to third quarter 1972 because of the reclassification of particular mills whose primary activity is now the weaving of manmade fiber fabrics rather than cotton fabrics. An overlap between the old and new mill assignment is available by comparing the preliminary and revised third quarter data as published in this series. It should be noted that the combination of data shown in this series (MQ-22T.1) and the manmade fiber broadwoven goods report (MQ-22T.2) for yarns consumed by type of mill, loom hours, and stocks are comparable.

#### **SEASONAL ADJUSTMENT**

This report presents seasonally adjusted data for a number of the most important series published quarterly in Current Industrial Reports Series MQ-22T.1, Cotton Broadwoven Gray Goods. The seasonal adjustment program largely eliminates the effect of normal seasonal variation (including variations due to vacations, weather, etc.) as measured over the time period for which data were used. The resulting information thus provides a better measure than the original data of the quarter-to-quarter variations which are due to factors that are not associated with a repetitive seasonal pattern.

# THE 1972 ECONOMIC CENSUSES

Early in 1972...we asked the business community's help in providing us with the basic information about its business activities during the year 1972. The facts were requested so that we, in turn, could provide YOU with the data from various economic areas! NOW - the results are in! They're being analyzed...fed to computers...and published for YOUR use....YOUR needs...YOUR advantage in keeping up with the latest trends in the business and industrial worlds.

There are hundreds of reports coming off the press as fast as figures are tabulated.

Get the facts! Have your name placed on our mailing lists to receive a copy of the Publications Programs and publications order forms (free of charge), which describe the contents of the reports and the scheduled release dates. Please fill in your name and address, check the appropriate boxes below, and mail to:

## Cotton Broadwoven Gray Goods

Third Quarter 1974

Issued December 1974

SERIES: MQ-22T.1(74)-3

The statistics in this publication are based on a survey of manufacturers and represent the entire U.S. production of cotton broadwoven gray fabrics over 12 inches in width. Estimates are included for companies whose reports were not received in time for tabulation. A more complete description of the survey appears on pages 8 and 9.

TABLE 1A.--SUMMARY OF SEASONALLY ADJUSTED PRODUCTION DATA, BY CLASS OF FABRIC: 1969 TO 1974  
(Millions of linear yards)

Quarter and year	Cotton broadwoven gray goods, total	Duck and allied fabrics	Sheeting and allied coarse and medium yarn fabrics	Print cloth yarn fabrics	Carded colored yarn fabrics	Towels, toweling, and dishcloths	Napped fabrics, blankets, and blanketing	Fine cotton fabrics	Other woven cotton fabrics and specialties
1974									
Third quarter.....	1,196.1	38.4	275.5	481.4	135.7	130.4	32.2	22.9	79.6
Second quarter.....	1,240.6	37.4	297.5	490.0	130.1	135.5	31.8	27.0	91.3

## DESCRIPTION OF SURVEY

The statistics in this publication and in the other MQ-22T reports were collected on Census Form MQ-22T, Broad Fabrics (Except Knit): Woven, Nonwoven, and Felts, from a panel of approximately 650 producers who account for about 95 percent of the total production. Estimates are included in the published figures for an additional 150 small producers reporting annually.

The current quarter's figures may also include estimates for respondents whose reports were not received in time for tabulation. Such missing figures are imputed from the quarter-to-quarter movements shown by reporting firms and are generally limited to a maximum of 10 percent to any one item. Individual items with higher imputation rates are footnoted.

The imputation rate is not an explicit indicator of the potential error in published figures due to nonresponse, because the actual quarterly movements for nonrespondents may or may not closely agree with the imputed movements. The probable range of difference between the actual and imputed figures is unknown. The degree of uncertainty regarding the accuracy of the data, however, increases as the percentage of imputation increases. Figures with high imputation rates, therefore, should be used with caution.

Statistics for previous quarters may be revised, due to receipt of corrected data from respondents, including late reports for which estimates were made, and other corrections. Figures which were revised significantly are indicated by footnotes.

The data in this report are not adjusted for number of working days.

## RELATED REPORTS

The following is a list of selected current and recent special textile reports published by the Census Bureau in the Current Industrial Reports series:

<u>Series No.</u>	<u>Title</u>	<u>Frequency</u>
M22A	Woven Fabrics--Production, Inventories, and Unfilled Orders	Monthly
M22D	Consumption on the Woolen and Worsted Systems	Monthly
M22P	Cotton, Manmade Fiber Staple, and Linters--Consumption, Stocks, and Spindle Activity	Monthly

MQ-22K	Shipments of Knit Cloth, including Interplant Transfers	Quarterly
MA-22F	Yarn Production	Annual
MA-22G	Narrow Fabrics	Annual
MA-22S	Broadwoven Fabrics Finished	Annual
MA-22H	Nonwoven Fabrics	Annual
MA-23X	Sheets, Pillowcases, and Towels	Annual

## SPECIAL TEXTILE REPORTS

At intervals of a few years, special supplemental reports on broadwoven fabrics are also published. Recent reports of this type are:

<u>Series</u>	<u>Title</u>	<u>Period Covered</u>
M22T Supp.	Broadwoven Fabrics--Blends and Mixtures	1965
M22T Supp.	Broadwoven Fabrics, Average Weight and Width of Fabric (Cotton, Manmade Fiber, and Wool Fabrics)	First Quarter 1972
M22T-1 Supp.	Broad Fabric Weaving Looms in Place by Type and Width	1964

## EXPLANATION OF TERMS

Cotton Fabrics--Wholly or chiefly by weight of cotton.

### Blends and Mixtures

Fabrics made from more than one fiber are classified in the same way as other fabrics, i.e., according to whether the fabric is chiefly cotton, wool, or manmade fiber. As examples, a fabric which is 55 percent cotton and 45 percent rayon is classified in the cotton section; a fabric which is 40 percent cotton, 30 percent rayon, and 30 percent acetate is classified in the manmade fibers section.

Blends and mixtures which are by weight 50 percent of one fiber and 10 percent of another fiber are classified according to the fiber of greatest value. As an example, a fabric which

is 50 percent polyester and 50 percent cotton is classified as polyester.

Fabrics which are 95 percent or more of one fiber are not considered blends. Such fabrics are included in the 100 percent classification for that fiber.

#### Units of Quantity

Production is reported in thousands of linear yards except as follows:

Blanketing--In thousands of linear yards, 72 inch width or equivalent.

Selected items in thousands of pounds as noted.

Production--Represents total production of cotton fabrics by all known weaving mills regardless of their primary activity.

Looms Operating--Represents number of looms operating on the specific fabrics at end of quarter.

Yarns Consumed Loom Hours, and Stocks of Selected Filament Yarns--Represents data for all mills primarily producing cotton broadwoven fabrics.

Revision to mill assignment data -- Information on loom hours, yarn consumption, and stocks shown in tables 3, 4, and 5 are not comparable with information prior to third quarter 1972 because of the reclassification of particular mills whose primary activity is now the weaving of manmade fiber fabrics rather than cotton fabrics. An overlap between the old and new mill assignment is available by comparing the preliminary and revised third quarter data as published in this series. It should be noted that the combination of data shown in this series (MQ-22T.1) and the manmade fiber broadwoven goods report (MQ-22T.2) for yarns consumed by type of mill, loom hours, and stocks are comparable.

#### **SEASONAL ADJUSTMENT**

This report presents seasonally adjusted data for a number of the most important series published quarterly in Current Industrial Reports Series MQ-22T.1, Cotton Broadwoven Gray Goods. The seasonal adjustment program largely eliminates the effect of normal seasonal variation (including variations due to vacations, weather, etc.) as measured over the time period for which data were used. The resulting information thus provides a better measure than the original data of the quarter-to-quarter variations which are due to factors that are not associated with a repetitive seasonal pattern.

# COUNTY<sub>AND</sub> CITY DATA BOOK 1972

A compact and comprehensive presentation of local area data tailored for use by market researchers, business analysts, economists, legislators, statisticians, librarians, and others.

Indispensable as a quick reference tool for a wide variety of economic and social facts on counties, cities, metropolitan areas, urbanized areas, and unincorporated places of 25,000 inhabitants or more in the United States.

## TAKEN FROM—

The 1970 Census of Population and Housing, the 1969 Census of Agriculture, and the 1967 Censuses of Business, Governments, Manufactures, and Mineral Industries. Statistics from other governmental and private agencies are also included.

## CONTAINS—

196 items of statistical data for each of the 50 States and 3,141 counties or county equivalents in the U.S.

163 items for each of 243 standard metropolitan statistical areas (SMSA's)

194 items for each of 840 cities of 25,000 inhabitants or more

99 items for each of 248 urbanized areas and 76 unincorporated places of 25,000 inhabitants or more.

## ALSO INCLUDES—

maps for each State, showing counties, SMSA's, and cities of 25,000 inhabitants or more

explanatory notes and source citations  
appendixes that expand or explain the coverage of the tables

## SUBJECTS COVERED—

- Agriculture
- Area
- Bank deposits
- Birth and death rates
- Business firms
- Climate
- Crime
- Education
- Electric bills
- Employment
- Farms
- Governmental revenue and expenditures
- Home equipment
- Hospitals
- Housing
- Income of families

- Labor force
- Local government employment
- Manufactures
- Migration
- Mineral industries
- Population
- Presidential vote
- Public assistance
- Retail trade
- Savings
- Selected services
- Social security
- Wholesale trade

1,076 pp. (clothbound) at \$18.65

## Cotton Broadwoven Gray Goods

Fourth Quarter 1974

Issued March 1975

SERIES: MQ-22T.1(74)-4

The statistics in this publication are based on a survey of manufacturers and represent the entire U.S. production of cotton broadwoven gray fabrics over 12 inches in width. Estimates are included for companies whose reports were not received in time for tabulation. A more complete description of the survey appears on pages 10 and 11.

<sup>F</sup> Revised.

<sup>1</sup>10 to 25 percent of this item is imputed. (See description of survey for a discussion of imputation rates.)

<sup>2</sup>Over 25 percent of this item is imputed.

## DESCRIPTION OF SURVEY

The statistics in this publication and in the other MQ-22T reports were collected on Census Form MQ-22T, Broad Fabrics (Except Knit): Woven, Nonwoven, and Felts, from a panel of approximately 650 producers who account for about 95 percent of the total production. Estimates are included in the published figures for an additional 150 small producers reporting annually.

The current quarter's figures may also include estimates for respondents whose reports were not received in time for tabulation. Such missing figures are imputed from the quarter-to-quarter movements shown by reporting firms and are generally limited to a maximum of 10 percent to any one item. Individual items with higher imputation rates are footnoted.

The imputation rate is not an explicit indicator of the potential error in published figures due to nonresponse, because the actual quarterly movements for nonrespondents may or may not closely agree with the imputed movements. The probable range of difference between the actual and imputed figures is unknown. The degree of uncertainty regarding the accuracy of the data, however, increases as the percentage of imputation increases. Figures with high imputation rates, therefore, should be used with caution.

Statistics for previous quarters may be revised, due to receipt of corrected data from respondents, including late reports for which estimates were made, and other corrections. Figures which were revised significantly are indicated by footnotes.

The data in this report are not adjusted for number of working days.

## RELATED REPORTS

The following is a list of selected current and recent special textile reports published by the Census Bureau in the Current Industrial Reports series:

<u>Series No.</u>	<u>Title</u>	<u>Frequency</u>
M22A	Woven Fabrics--Production, Inventories, and Unfilled Orders	Monthly
M22D	Consumption on the Woolen and Worsted Systems	Monthly
M22P	Cotton, Manmade Fiber Staple, and Linters--Consumption, Stocks, and Spindle Activity	Monthly

MQ-22K	Shipments of Knit Cloth, including Interplant Transfers	Quarterly
MA-22F	Yarn Production	Annual
MA-22G	Narrow Fabrics	Annual
MA-22S	Broadwoven Fabrics Finished	Annual
MA-22H	Nonwoven Fabrics	Annual
MA-23X	Sheets, Pillowcases, and Towels	Annual

## SPECIAL TEXTILE REPORTS

At intervals of a few years, special supplemental reports on broadwoven fabrics are also published. Recent reports of this type are:

<u>Series</u>	<u>Title</u>	<u>Period Covered</u>
M22T Supp.	Broadwoven Fabrics--Blends and Mixtures	1965
M22T Supp.	Broadwoven Fabrics, Average Weight and Width of Fabric (Cotton, Manmade Fiber, and Wool Fabrics)	First Quarter 1972
M22T-1 Supp.	Broad Fabric Weaving Looms in Place by Type and Width	1964

## EXPLANATION OF TERMS

Cotton Fabrics--Wholly or chiefly by weight of cotton.

### Blends and Mixtures

Fabrics made from more than one fiber are classified in the same way as other fabrics, i.e., according to whether the fabric is chiefly cotton, wool, or manmade fiber. As examples, a fabric which is 55 percent cotton and 45 percent rayon is classified in the cotton section; a fabric which is 40 percent cotton, 30 percent rayon, and 30 percent acetate is classified in the manmade fibers section.

Blends and mixtures which are by weight 50 percent of one fiber and 10 percent of another fiber are classified according to the fiber of greatest value. As an example, a fabric which

is 50 percent polyester and 50 percent cotton is classified as polyester.

Fabrics which are 95 percent or more of one fiber are not considered blends. Such fabrics are included in the 100 percent classification for that fiber.

#### Units of Quantity

Production is reported in thousands of linear yards except as follows:

Blanketing--In thousands of linear yards, 72 inch width or equivalent.

Selected items in thousands of pounds as noted.

Production--Represents total production of cotton fabrics by all known weaving mills regardless of their primary activity.

Looms Operating--Represents number of looms operating on the specific fabrics at end of quarter.

Yarns Consumed Loom Hours, and Stocks of Selected Filament Yarns--Represents data for all mills primarily producing cotton broadwoven fabrics.

Revision to mill assignment data--Information on loom hours, yarn consumption, and stocks shown in tables 3, 4, and 5 are not comparable with information prior to third quarter 1972 because of the reclassification of particular mills whose primary activity is now the weaving of manmade fiber fabrics rather than cotton fabrics. An overlap between the old and new mill assignment is available by comparing the preliminary and revised third quarter data as published in this series. It should be noted that the combination of data shown in this series (MQ-22T.1) and the manmade fiber broadwoven goods report (MQ-22T.2) for yarns consumed by type of mill, loom hours, and stocks are comparable.

#### **SEASONAL ADJUSTMENT**

This report presents seasonally adjusted data for a number of the most important series published quarterly in Current Industrial Reports Series MQ-22T.1, Cotton Broadwoven Gray Goods. The seasonal adjustment program largely eliminates the effect of normal seasonal variation (including variations due to vacations, weather, etc.) as measured over the time period for which data were used. The resulting information thus provides a better measure than the original data of the quarter-to-quarter variations which are due to factors that are not associated with a repetitive seasonal pattern.

# Cotton Broadwoven Gray Goods

## Summary for 1974

Issued July 1975

SERIES: MQ-22T.1(74)-5

### DESCRIPTION OF SURVEY

The statistics in this publication summarize the information published in Census quarterly series MQ-22T.1 Cotton Broadwoven Gray Goods, from a sample of mills accounting for approximately 98 percent of the total U.S. production of cotton broadwoven goods. Estimates have been included for manufacturers whose reports were not received and are based on their production as reported in the 1973 annual survey.

The data in this report are not adjusted for number of working days.

### COVERAGE

The information contained in this report is collected on Census quarterly form MQ-22T, "Broadwoven Fabrics (gray)." A separate report is requested from each mill, although in some instances the "mill" reported as one unit to the Census Bureau constitutes more than one location.

Fabrics woven on commission are reported in this series by the commission mill, not by the company for which the work is contracted.

### COVERAGE OF INDIVIDUAL TABLES

The production figures shown in tables 1 through 3 represent total production of the specified fabrics by all weaving mills regardless of their primary activity.

However, because a single report is collected from an individual mill, the information shown in tables 4 and 5 relates to the entire activity of all mills primarily producing cotton fabrics. Insofar as these mills produced other fabrics (manmade fiber or wool) as a secondary project, the yarn consumption or loom activity for such fabrics would be included in this report. Similarly, the yarns consumed in the manufacture of cotton fabrics produced as a secondary product in a mill primarily producing manmade fiber fabrics is excluded from this report and included in the Current Industrial Reports publication relating to manmade fiber broadwoven fabrics.

### WOOLEN AND WORSTED MILLS

Mills with woolen and worsted machinery which primarily produce manmade fiber fabrics do not report yarn consumption data. Separate data on knit cloth are published by the Bureau of the Census in quarterly series MQ-22K, Production of Knit Fabric. Data are available upon request.

### DEFINITION OF TERMS

**Broad Fabrics**—Fabric over 12" in width, as made.

**Cotton Fabrics**—Includes fabric wholly or chiefly by weight of cotton.

**Blends, Chiefly Cotton**—Includes fabrics chiefly by weight of cotton and containing other fibers, such as nylon, polyester, etc.

Inquiries concerning these figures should be addressed to the U.S. Department of Commerce, Bureau of the Census, Industry Division, Washington, D.C. 20233, or call Carole A. Klein, telephone 301-763-7541.

# Bureau of the Census catalog of publications 1790-1972

## A Guide To The Growth Of The Nation!

A unique volume which provides a comprehensive historical bibliography of sources for Bureau of the Census statistics from 1790 through 1972.

The ever-growing flow of statistics from the "Nation's Fact Finder" and the increasing awareness of the value of data in planning by businessmen, government officials, and individuals make this Catalog an indispensable data-finding guide.

### BUREAU OF THE CENSUS **CATALOG OF PUBLICATIONS**

1790 - 1972

## TWO CATALOGS UNDER ONE COVER

This new consolidated Catalog is presented in two sections. The first section is a reprint of the Catalog of United States Census Publications, 1790-1945 which had been out of print for several years. This Catalog, developed by the Census Library Project under the sponsorship of the Bureau of the Census and the Library of Congress, presents a compilation of all materials issued by the Bureau of the Census and its predecessor organizations starting with the first decennial report of 1790.

The second section, Bureau of the Census Catalog of Publications, 1946-1972 is a new research document that updates and complements its historical predecessor. The information in this publication is a compilation of the data published in the annual issues of the Bureau of the Census Catalog from 1946 to 1972.

## Cotton Broadwoven Gray Goods

First Quarter 1975

Issued June 1975

SERIES: MQ-22T.1(75)-1

The statistics in this publication are based on a survey of manufacturers and represent the entire U.S. production of cotton broadwoven gray fabrics over 12 inches in width. Estimates are included for companies whose reports were not received in time for tabulation. A more complete description of the survey appears on pages 8 and 9.

TABLE 1A.--SUMMARY OF SEASONALLY ADJUSTED PRODUCTION DATA, BY CLASS OF FABRIC: 1970 TO 1975

(Millions of linear yards)

Quarter and year	Cotton broadwoven gray goods, total	Duck and allied fabrics	Sheeting and allied coarse and medium yarn fabrics	Print cloth yarn fabrics	Carded colored yarn fabrics	Towels, toweling, and dishcloths	Napped fabrics, blankets, and blanketing	Fine cotton fabrics	Other woven cotton fabrics and specialties

## DESCRIPTION OF SURVEY

The statistics in this publication and in the other MQ-22T reports were collected on Census quarterly Form MQ-22T, "Broadwoven Fabrics (Gray, Except Knit)," from a panel of approximately 650 producers who account for about 95 percent of the total production. Estimates are included in the published figures for an additional 150 small producers reporting annually.

The current quarter's figures may also include estimates for respondents whose reports were not received in time for tabulation. Such missing figures are imputed from the quarter-to-quarter movements shown by reporting firms and are generally limited to a maximum of 10 percent for any one item. Individual items with higher imputation rates are footnoted.

The imputation rate is not an explicit indicator of the potential error in published figures due to non-response, because the actual quarterly movements for nonrespondents may or may not closely agree with the imputed movements. The probable range of difference between the actual and imputed figures is unknown. The degree of uncertainty regarding the accuracy of the data, however, increases as the percentage of imputation increases. Figures with high imputation rates, therefore, should be used with caution.

Statistics for previous quarters may be revised, due to receipts of corrected data from respondents, including late reports for which estimates were made, and other corrections. Figures which were revised significantly are indicated by footnotes.

The data in this report are not adjusted for number of working days.

## SEASONAL ADJUSTMENT

This report presents seasonally adjusted data for a number of the most important series published quarterly in Current Industrial Reports Series MQ-22T.1, "Cotton Broadwoven Gray Goods." The seasonal adjustment program largely eliminates the effect of normal seasonal variation (including variations due to vacations, weather, etc.) as measured over the time period for which data were used. The resulting information thus provides a better measure than the original data of the quarter-to-quarter variations which are due to factors that are not associated with a repetitive seasonal pattern.

## RELATED REPORTS

The following is a list of selected current and recent textile reports published by the Bureau of the Census in the Current Industrial Reports series:

Series	Title	Frequency
M22A	Woven Fabrics: Production, Inventories, and Unfilled Orders	Monthly
M22D	Consumption on the Woolen and Worsted Systems	Monthly
M22P	Cotton, Manmade Fiber Staple, and Linters—Consumption, Stocks, and Spindle Activity	Monthly
MQ-22K	Knit Fabric Production	Quarterly
MA-22F	Yarn Production	Annually
MA-22G	Narrow Fabrics	Annually
MA-22S	Broadwoven Fabrics Finished	Annually
MQ-23X	Sheets, Pillowcases, and Towels	Quarterly

## SPECIAL TEXTILE REPORTS

At intervals of a few years, special supplemental reports on broadwoven fabrics are also published. Recent reports of this type are shown below:

Series	Title	Period Covered
M22T Supp.	Broadwoven Fabrics—Average Weight and Width of Fabric (Cotton, Manmade Fiber, and Wool Fabrics)	First Quarter 1972

## EXPLANATION OF TERMS

**Cotton Fabrics** Wholly or chiefly by weight of cotton.

**Blends and Mixtures**—Fabrics made from more than one fiber and classified in the same way as other

fabrics, i.e., according to whether the fabric is chiefly cotton, wool, or manmade fiber. As examples, a fabric which is 55 percent cotton and 45 percent rayon is classified in the cotton section; a fabric which is 40 percent cotton, 30 percent rayon, and 30 percent acetate is classified in the manmade fibers section.

Blends and mixtures which are by weight 50 percent of one fiber and 10 percent of another fiber are classified according to the fiber of greatest value. As an example, a fabric which is 50 percent polyester and 50 percent cotton is classified as polyester.

Fabrics which are 95 percent or more of one fiber are not considered blends. Such fabrics are included in the 100 percent classification for that fiber.

**Units of Quantity**—Production is reported in thousands of linear yards except blanketing, which is in thousands of linear yards, 72-inch width or equivalent, and selected items in thousands of pounds as noted.

**Production**—Represents total production of cotton fabrics by all known weaving mills regardless of their primary activity.

**Looms Operating**—Represents number of looms operating on the specific fabrics at end of quarter.

**Yarns Consumed, Loom-Hours, and Stocks of Selected Filament Yarns**—Represents data for all mills primarily producing cotton broadwoven fabrics.

**Revision to Mill Assignment Data**—Information on loom-hours, yarn consumption, and stocks shown in tables 3, 4, and 5 are not comparable with information prior to third quarter 1972 because of the reclassification of particular mills whose primary activity is now the weaving of manmade fiber fabrics rather than cotton fabrics. An overlap between the old and new mill assignment is available by comparing the preliminary and revised third quarter data as published in this series. It should be noted that the combination of data shown in this series (MQ-22T.1) and the manmade fiber broadwoven goods report (MQ-22T.2) for yarns consumed by type of mill, loom-hours, and stocks are comparable.

# CURRENT CONSTRUCTION REPORTS

**CONSTRUCTION accounts for approximately 12 percent of the gross national product!**

To assist industry representatives, research specialists, market analysts, and government officials interested in this vital segment of the Nation's economy, the Bureau of the Census issues **monthly, quarterly, and annual reports** on the value of new construction put in place, building permits, housing starts, housing completions, housing sales, alterations and repairs and demolition of residential structures.

Current Construction Reports include:

- C20 - Housing Starts
- C22 - Housing Completions
- C25 - Sales of New One-Family Homes
- C30 - Value of New Construction Put in Place
- C40 - Housing Authorized by Building Permits and Public Contracts
- C41 - Authorized Construction - Washington, D.C. Area
- C45 - Permits Issued for Demolition of Residential Structures in Selected Cities
- C50 - Expenditures on Residential Additions, Alterations, Maintenance and Repairs, and Replacements

For further information and a Publications Order Form, free of charge, on all the above reports, write to the Subscriber Services Section (Publications), Social and Economic Statistics Administration, Washington, D.C. 20233

# COUNTY AND CITY DATA BOOK 1972

A compact and comprehensive presentation of local area data tailored for use by market researchers, business analysts, economists, legislators, statisticians, librarians, and others.

Indispensable as a quick reference tool for a wide variety of economic and social facts on counties, cities, metropolitan areas, urbanized areas, and unincorporated places of 25,000 inhabitants or more in the United States.

## TAKEN FROM—

The 1970 Census of Population and Housing, the 1969 Census of Agriculture, and the 1967 Censuses of Business, Governments, Manufactures, and Mineral Industries. Statistics from other governmental and private agencies are also included.

## CONTAINS—

196 items of statistical data for each of the 50 States and 3,141 counties or county equivalents in the U.S.

163 items for each of 243 standard metropolitan statistical areas (SMSA's)

194 items for each of 840 cities of 25,000 inhabitants or more

99 items for each of 248 urbanized areas and 76 unincorporated places of 25,000 inhabitants or more.

## ALSO INCLUDES—

maps for each State, showing counties, SMSA's, and cities of 25,000 inhabitants or more

explanatory notes and source citations

appendixes that expand or explain the coverage of the tables

## SUBJECTS COVERED—

Agriculture	Income of families
Area	Labor force
Bank deposits	Local government employment
Birth and death rates	Manufactures
Business firms	Migration
Climate	Mineral industries
Crime	Population
Education	Presidential vote
Electric bills	Public assistance
Employment	Retail trade
Farms	Savings
Governmental revenue and expenditures	Selected services
Home equipment	Social security
Hospitals	Wholesale trade
Housing	

1,076 pp. (clothbound) at \$18.65

## COMPUTER TAPES AND PUNCHCARDS—

Computer tapes and punchcards containing all the data in this volume are available for purchase. Corresponding sets of tapes and cards of the 1967, 1962, 1956, and 1952 editions of this book are also available for purchase.

## CURRENT INDUSTRIAL REPORTS

## Cotton Broadwoven Gray Goods

Second Quarter 1975

Issued September 1975

SERIES: MQ-22T.1(75)-2

The statistics in this publication are based on a survey of manufacturers and represent the entire U.S. production of cotton broadwoven gray fabrics over 12 inches in width. Estimates are included for companies whose reports were not received in time for tabulation. A more complete description of the survey appears on pages 8 and 9.

TABLE 1A.--SUMMARY OF SEASONALLY ADJUSTED PRODUCTION DATA, BY CLASS OF FABRIC: 1970 TO 1975

(Millions of linear yards)

Quarter and year	Cotton broadwoven gray goods, total	Duck and allied fabrics	Sheeting and allied coarse and medium yarn fabrics	Print cloth yarn fabrics	Carded colored yarn fabrics	Towels, toweling, and dishcloths	Napped fabrics, blankets, and blanketing	Fine cotton fabrics	Other woven cotton fabrics and specialties

## DESCRIPTION OF SURVEY

The statistics in this publication and in the other MQ-22T reports were collected on Census quarterly Form MQ-22T, "Broadwoven Fabrics (Gray, Except Knit)," from a panel of approximately 650 producers who account for about 95 percent of the total production. Estimates are included in the published figures for an additional 150 small producers reporting annually.

The current quarter's figures may also include estimates for respondents whose reports were not received in time for tabulation. Such missing figures are imputed from the quarter-to-quarter movements shown by reporting firms and are generally limited to a maximum of 10 percent for any one item. Individual items with higher imputation rates are footnoted.

The imputation rate is not an explicit indicator of the potential error in published figures due to non-response, because the actual quarterly movements for nonrespondents may or may not closely agree with the imputed movements. The probable range of difference between the actual and imputed figures is unknown. The degree of uncertainty regarding the accuracy of the data, however, increases as the percentage of imputation increases. Figures with high imputation rates, therefore, should be used with caution.

Statistics for previous quarters may be revised, due to receipts of corrected data from respondents, including late reports for which estimates were made, and other corrections. Figures which were revised significantly are indicated by footnotes.

The data in this report are not adjusted for number of working days.

## SEASONAL ADJUSTMENT

This report presents seasonally adjusted data for a number of the most important series published quarterly in Current Industrial Reports Series MQ-22T.1, "Cotton Broadwoven Gray Goods." The seasonal adjustment program largely eliminates the effect of normal seasonal variation (including variations due to vacations, weather, etc.) as measured over the time period for which data were used. The resulting information thus provides a better measure than the original data of the quarter-to-quarter variations which are due to factors that are not associated with a repetitive seasonal pattern.

## RELATED REPORTS

The following is a list of selected current and recent textile reports published by the Bureau of the Census in the Current Industrial Reports series:

Series	Title	Frequency
M22A	Woven Fabrics: Production, Inventories, and Unfilled Orders	Monthly
M22D	Consumption on the Woolen and Worsted Systems	Monthly
M22P	Cotton, Manmade Fiber Staple, and Linters—Consumption, Stocks, and Spindle Activity	Monthly
MQ-22K	Knit Fabric Production	Quarterly
MA-22F	Yarn Production	Annually
MA-22G	Narrow Fabrics	Annually
MA-22S	Broadwoven Fabrics Finished	Annually
MQ-23X	Sheets, Pillowcases, and Towels	Quarterly

## SPECIAL TEXTILE REPORTS

At intervals of a few years, special supplemental reports on broadwoven fabrics are also published. Recent reports of this type are shown below:

Series	Title	Period Covered
M22T Supp.	Broadwoven Fabrics—Average Weight and Width of Fabric (Cotton, Manmade Fiber, and Wool Fabrics)	First Quarter 1972

## EXPLANATION OF TERMS

**Cotton Fabrics**—Wholly or chiefly by weight of cotton.

**Blends and Mixtures**—Fabrics made from more than one fiber and classified in the same way as other

fabrics, i.e., according to whether the fabric is chiefly cotton, wool, or manmade fiber. As examples, a fabric which is 55 percent cotton and 45 percent rayon is classified in the cotton section; a fabric which is 40 percent cotton, 30 percent rayon, and 30 percent acetate is classified in the manmade fibers section.

Blends and mixtures which are by weight 50 percent of one fiber and 10 percent of another fiber are classified according to the fiber of greatest value. As an example, a fabric which is 50 percent polyester and 50 percent cotton is classified as polyester.

Fabrics which are 95 percent or more of one fiber are not considered blends. Such fabrics are included in the 100 percent classification for that fiber.

**Units of Quantity**—Production is reported in thousands of linear yards except blanketing, which is in thousands of linear yards, 72-inch width or equivalent, and selected items in thousands of pounds as noted.

**Production**—Represents total production of cotton fabrics by all known weaving mills regardless of their primary activity.

**Looms Operating**—Represents number of looms operating on the specific fabrics at end of quarter.

**Yarns Consumed, Loom-Hours, and Stocks of Selected Filament Yarns**—Represents data for all mills primarily producing cotton broadwoven fabrics.

**Revision to Mill Assignment Data**—Information on loom-hours, yarn consumption, and stocks shown in tables 3, 4, and 5 are not comparable with information prior to third quarter 1972 because of the reclassification of particular mills whose primary activity is now the weaving of manmade fiber fabrics rather than cotton fabrics. An overlap between the old and new mill assignment is available by comparing the preliminary and revised third quarter data as published in this series. It should be noted that the combination of data shown in this series (MQ-22T.1) and the manmade fiber broadwoven goods report (MQ-22T.2) for yarns consumed by type of mill, loom-hours, and stocks are comparable.

## Cotton Broadwoven Gray Goods

Third Quarter 1975

Issued December 1975

SERIES: MQ-22T.1(75)-3

The statistics in this publication are based on a survey of manufacturers and represent the entire U.S. production of cotton broadwoven gray fabrics over 12 inches in width. Estimates are included for companies whose reports were not received in time for tabulation. Detailed information on production of manmade fiber fabrics and woolen and worsted apparel fabrics are available in Current Industrial Reports Series MQ-22T.2 and MQ-22T.3, respectively. A more complete description of the survey appears on pages 9 and 10.

## BROADWOVEN FABRICS PRODUCTION, 1968 - 1975

U.S. DEPARTMENT OF COMMERCE | Bureau of the Census

Inquiries concerning these figures should be addressed to the U.S. Department of Commerce, Bureau of the Census, Industry Division, Washington, D.C. 20233. For sale by the Subscriber Services Section (Publications), Bureau of the Census, Washington, D.C. 20233, or any Department of Commerce district office. Price: 25 cents per copy, \$1.00 per year.

## DESCRIPTION OF SURVEY

The statistics in this publication and in the other MQ-22T reports were collected on Census quarterly Form MQ-22T, "Broadwoven Fabrics (Gray, Except Knit)," from a panel of approximately 650 producers who account for about 95 percent of the total production. Estimates are included in the published figures for an additional 150 small producers reporting annually.

The current quarter's figures may also include estimates for respondents whose reports were not received in time for tabulation. Such missing figures are imputed from the quarter-to-quarter movements shown by reporting firms and are generally limited to a maximum of 10 percent for any one item. Individual items with higher imputation rates are footnoted.

The imputation rate is not an explicit indicator of the potential error in published figures due to non-response, because the actual quarterly movements for nonrespondents may or may not closely agree with the imputed movements. The probable range of difference between the actual and imputed figures is unknown. The degree of uncertainty regarding the accuracy of the data, however, increases as the percentage of imputation increases. Figures with high imputation rates, therefore, should be used with caution.

Statistics for previous quarters may be revised, due to receipts of corrected data from respondents, including late reports for which estimates were made, and other corrections. Figures which were revised significantly are indicated by footnotes.

The data in this report are not adjusted for number of working days.

## SEASONAL ADJUSTMENT

This report presents seasonally adjusted data for a number of the most important series published quarterly in Current Industrial Reports Series MQ-22T.1, "Cotton Broadwoven Gray Goods." The seasonal adjustment program largely eliminates the effect of normal seasonal variation (including variations due to vacations, weather, etc.) as measured over the time period for which data were used. The resulting information thus provides a better measure than the original data of the quarter-to-quarter variations which are due to factors that are not associated with a repetitive seasonal pattern.

## RELATED REPORTS

The following is a list of selected current and recent textile reports published by the Bureau of the Census in the Current Industrial Reports series:

Series	Title	Frequency
M22A	Woven Fabrics: Production, Inventories, and Unfilled Orders	Monthly
M22D	Consumption on the Woolen and Worsted Systems	Monthly
M22P	Cotton, Manmade Fiber Staple, and Linters—Consumption, Stocks, and Spindle Activity	Monthly
MQ-22K	Knit Fabric Production	Quarterly
MA-22F	Yarn Production	Annually
MA-22G	Narrow Fabrics	Annually
MA-22S	Broadwoven Fabrics Finished	Annually
MQ-23X	Sheets, Pillowcases, and Towels	Quarterly

## SPECIAL TEXTILE REPORTS

At intervals of a few years, special supplemental reports on broadwoven fabrics are also published. Recent reports of this type are shown below:

Series	Title	Period Covered
M22T Supp.	Broadwoven Fabrics—Average Weight and Width of Fabric (Cotton, Manmade Fiber, and Wool Fabrics)	First Quarter 1972

## EXPLANATION OF TERMS

**Cotton Fabrics**—Wholly or chiefly by weight of cotton.

**Blends and Mixtures**—Fabrics made from more than one fiber and classified in the same way as other

fabrics, i.e., according to whether the fabric is chiefly cotton, wool, or manmade fiber. As examples, a fabric which is 55 percent cotton and 45 percent rayon is classified in the cotton section; a fabric which is 40 percent cotton, 30 percent rayon, and 30 percent acetate is classified in the manmade fibers section.

Blends and mixtures which are by weight 50 percent of one fiber and 10 percent of another fiber are classified according to the fiber of greatest value. As an example, a fabric which is 50 percent polyester and 50 percent cotton is classified as polyester.

Fabrics which are 95 percent or more of one fiber are not considered blends. Such fabrics are included in the 100 percent classification for that fiber.

**Units of Quantity** Production is reported in thousands of linear yards except blanketing, which is in thousands of linear yards, 72-inch width or equivalent, and selected items in thousands of pounds as noted.

**Production**—Represents total production of cotton fabrics by all known weaving mills regardless of their primary activity.

**Looms Operating**—Represents number of looms operating on the specific fabrics at end of quarter.

**Yarns Consumed, Loom-Hours, and Stocks of Selected Filament Yarns**—Represents data for all mills primarily producing cotton broadwoven fabrics.

**Revision to Mill Assignment Data**—Information on loom-hours, yarn consumption, and stocks shown in tables 3, 4, and 5 are not comparable with information prior to third quarter 1972 because of the reclassification of particular mills whose primary activity is now the weaving of manmade fiber fabrics rather than cotton fabrics. An overlap between the old and new mill assignment is available by comparing the preliminary and revised third quarter data as published in this series. It should be noted that the combination of data shown in this series (MQ-22T.1) and the manmade fiber broadwoven goods report (MQ-22T.2) for yarns consumed by type of mill, loom-hours, and stocks are comparable.

# THE 1972 ECONOMIC CENSUSES

Early in 1973...we asked the business community's help in providing us with the basic information about its business activities during the year 1972. The facts were requested so that we, in turn, could provide YOU with the data from various economic areas! NOW—the results are in! They've been analyzed...fed to computers...and published for YOUR use....YOUR needs...YOUR advantage in keeping up with the latest trends in the business and industrial worlds.

There are hundreds of reports coming off the press as fast as figures are tabulated.

Get the facts! Have your name placed on our mailing lists to receive publications programs, which describe the contents of the reports and list the scheduled release dates, and publication announcements, which furnish prices and order forms for reports in print. Please fill in the request form below and mail to:

# Cotton Broadwoven Gray Goods

## Fourth Quarter 1975

Issued March 1976

SERIES: MQ-22T.1(75)-4

The statistics in this publication are based on a survey of manufacturers and represent the entire U.S. production of cotton broadwoven gray fabrics over 12 inches in width. Estimates are included for companies whose reports were not received in time for tabulation. Detailed information on production of manmade fiber fabrics and woolen and worsted apparel fabrics are available in Current Industrial Reports Series MQ-22T.2 and MQ-22T.3, respectively. A more complete description of the survey appears on pages 9 and 10.

### BROADWOVEN FABRICS PRODUCTION, 1968 - 1975

U.S. DEPARTMENT OF COMMERCE | Bureau of the Census

Inquiries concerning these figures should be addressed to the U.S. Department of Commerce, Bureau of the Census, Industry Division, Washington, D.C. 20233. For sale by the Subscriber Services Section (Publications), Bureau of the Census, Washington, D.C. 20233, or any Department of Commerce district office. Price: 25 cents per copy, \$1.00 per year.

## DESCRIPTION OF SURVEY

The statistics in this publication and in the other MQ-22T reports were collected on Census quarterly Form MQ-22T, "Broadwoven Fabrics (Gray, Except Knit)," from a panel of approximately 650 producers who account for about 95 percent of the total production. Estimates are included in the published figures for an additional 150 small producers reporting annually.

The current quarter's figures may also include estimates for respondents whose reports were not received in time for tabulation. Such missing figures are imputed from the quarter-to-quarter movements shown by reporting firms and are generally limited to a maximum of 10 percent for any one item. Individual items with higher imputation rates are footnoted.

The imputation rate is not an explicit indicator of the potential error in published figures due to non-response, because the actual quarterly movements for nonrespondents may or may not closely agree with the imputed movements. The probable range of difference between the actual and imputed figures is unknown. The degree of uncertainty regarding the accuracy of the data, however, increases as the percentage of imputation increases. Figures with high imputation rates, therefore, should be used with caution.

Statistics for previous quarters may be revised, due to receipts of corrected data from respondents, including late reports for which estimates were made, and other corrections. Figures which were revised significantly are indicated by footnotes.

The data in this report are not adjusted for number of working days.

## SEASONAL ADJUSTMENT

This report presents seasonally adjusted data for a number of the most important series published quarterly in Current Industrial Reports Series MQ-22T.1, "Cotton Broadwoven Gray Goods." The seasonal adjustment program largely eliminates the effect of normal seasonal variation (including variations due to vacations, weather, etc.) as measured over the time period for which data were used. The resulting information thus provides a better measure than the original data of the quarter-to-quarter variations which are due to factors that are not associated with a repetitive seasonal pattern.

## RELATED REPORTS

The following is a list of selected current and recent textile reports published by the Bureau of the Census in the Current Industrial Reports series:

Series	Title	Frequency
M22A	Woven Fabrics: Production, Inventories, and Unfilled Orders	Monthly
M22D	Consumption on the Woolen and Worsted Systems	Monthly
M22P	Cotton, Manmade Fiber Staple, and Linters—Consumption, Stocks, and Spindle Activity	Monthly
MQ-22K	Knit Fabric Production	Quarterly
MA-22F	Yarn Production	Annually
MA-22G	Narrow Fabrics	Annually
MA-22S	Broadwoven Fabrics Finished	Annually
MQ-23X	Sheets, Pillowcases, and Towels	Quarterly

## SPECIAL TEXTILE REPORTS

At intervals of a few years, special supplemental reports on broadwoven fabrics are also published. Recent reports of this type are shown below:

Series	Title	Period Covered
M22T Supp.	Broadwoven Fabrics—Average Weight and Width of Fabric (Cotton, Manmade Fiber, and Wool Fabrics)	First Quarter 1972

## EXPLANATION OF TERMS

**Cotton Fabrics**—Wholly or chiefly by weight of cotton.

**Blends and Mixtures**—Fabrics made from more than one fiber and classified in the same way as other

fabrics, i.e., according to whether the fabric is chiefly cotton, wool, or manmade fiber. As examples, a fabric which is 55 percent cotton and 45 percent rayon is classified in the cotton section; a fabric which is 40 percent cotton, 30 percent rayon, and 30 percent acetate is classified in the manmade fibers section.

Blends and mixtures which are by weight 50 percent of one fiber and 10 percent of another fiber are classified according to the fiber of greatest value. As an example, a fabric which is 50 percent polyester and 50 percent cotton is classified as polyester.

Fabrics which are 95 percent or more of one fiber are not considered blends. Such fabrics are included in the 100 percent classification for that fiber.

**Units of Quantity** Production is reported in thousands of linear yards except blanketing, which is in thousands of linear yards, 72-inch width or equivalent, and selected items in thousands of pounds as noted.

**Production**—Represents total production of cotton fabrics by all known weaving mills regardless of their primary activity.

**Looms Operating**—Represents number of looms operating on the specific fabrics at end of quarter.

**Yarns Consumed, Loom-Hours, and Stocks of Selected Filament Yarns**—Represents data for all mills primarily producing cotton broadwoven fabrics.

**Revision to Mill Assignment Data**—Information on loom-hours, yarn consumption, and stocks shown in tables 3, 4, and 5 are not comparable with information prior to third quarter 1972 because of the reclassification of particular mills whose primary activity is now the weaving of manmade fiber fabrics rather than cotton fabrics. An overlap between the old and new mill assignment is available by comparing the preliminary and revised third quarter data as published in this series. It should be noted that the combination of data shown in this series (MQ-22T.1) and the manmade fiber broadwoven goods report (MQ-22T.2) for yarns consumed by type of mill, loom-hours, and stocks are comparable.

# It's good business

to base your business decisions  
on the facts.

U.S. INDUSTRIAL OUTLOOK puts the facts at your fingertips. It could be the best investment you will make this year.

A great bargain for small business: the services of a staff of 100 industry analysts for \$5.45 per copy. Helpful statistics, analyses and comments on more than 200 industries to back up your own business judgment.

U.S. INDUSTRIAL OUTLOOK 1976 gives you the facts you need about actual product and industry shipments, exports, imports, employment trends since 1967 with projections for 10 years into the future.

A service of the U.S. Department of Commerce, Domestic and International Business Administration, to foster the progress of business.

# Cotton Broadwoven Gray Goods

## Summary for 1975

Issued August 1976

SERIES: MQ-22T.1 (75)-5

### SUMMARY OF FINDINGS

Total production of cotton broadwoven gray goods decreased by 13 percent to 4,094.7 million linear yards in 1975. All major product lines decreased except for

carded colored yarn fabrics which increased by 33 percent. Within that product class denims increased by 52 percent and all other carded colored yarn decreased by 35 percent.

BROADWOVEN FABRICS PRODUCTION: 1969 TO 1975  
(Millions of linear yards)

----- Seasonally adjusted      ——— Not adjusted

<sup>1</sup> Excludes government orders.

<sup>2</sup> Rayon, nylon, and polyester fibers only. Includes tire cord fabrics.

Inquiries concerning these figures should be addressed to the U.S. Department of Commerce, Bureau of the Census, Industry Division, Washington, D.C. 20233, or call Carole A. Klein, (301) 763-7541.

U.S. Department of Commerce      BUREAU OF THE CENSUS

For sale by the Subscriber Services Section (Publications), Bureau of the Census, Washington, D.C. 20233, or any U.S. Department of Commerce district office. Postage stamps not acceptable; currency submitted at sender's risk. Remittances from foreign countries must be by international money order or by a draft on a U.S. bank. Price: 25 cents per copy, \$1.45 per year.

## DESCRIPTION OF SURVEY

The statistics in this publication summarize the information published in Census quarterly series MQ-22T.1, **Cotton Broadwoven Gray Goods**, from a sample of mills accounting for approximately 98 percent of the total U.S. production of cotton broadwoven goods. Estimates have been included for manufacturers whose reports were not received and are based on their production as reported in the 1974 annual survey.

The data in this report are not adjusted for number of working days.

The information contained in this report is collected on Census quarterly form MQ-22T, **Broadwoven Fabrics (gray)**. A separate report is requested from each mill, although in some instances the "mill" reported as one unit to the Census Bureau, constitutes more than one location.

Fabrics woven on commission are reported in this series by the commission mill, not by the company for which the work is contracted.

The production figures shown in tables 1 through 3 represent total production of the specified fabrics by all weaving mills regardless of their primary activity. However, because a single report is collected from an individual mill, the information shown in tables 4 and 5 relates to the entire activity of all mills primarily producing cotton fabrics. Insofar as these mills produced other fabrics (manmade fiber or wool) as a secondary product, the yarn consumption or loom activity for such fabrics would be included in this report. Similarly, the yarns consumed in the manufacture of cotton fabrics produced as a secondary product in a mill primarily producing manmade fiber fabrics is excluded from this report and included in the Current Industrial Reports publication relating to manmade fiber broadwoven fabrics.

Mills with woolen and worsted machinery which primarily produce manmade fiber fabrics do not report yarn consumption data.

This report presents seasonally adjusted data for a number of the most important series published quarterly in Current Industrial Reports Series MQ-22T.1, **Cotton Broadwoven Gray Goods**. The seasonal adjustment program largely eliminates the effect of normal seasonal variation (including variations due to vacations, weather, etc.) as measured over the time period for which data were used. The resulting information

thus provides a better measure than the original data of the quarter-to-quarter variations which are due to factors that are not associated with a repetitive seasonal pattern.

## EXPLANATION OF TERMS

**Cotton fabrics**—Wholly or chiefly by weight of cotton.

**Blends and mixtures**—Fabrics made from more than one fiber and classified in the same way as other fabrics, i.e., according to whether the fabric is chiefly cotton, wool, or manmade fiber. As examples, a fabric which is 55 percent cotton and 45 percent rayon is classified in the cotton section; a fabric which is 40 percent cotton, 30 percent rayon, and 30 percent acetate is classified in the manmade fibers section.

Blends and mixtures which are by weight 50 percent of one fiber and 10 percent of another fiber are classified according to the fiber of greatest value. As an example, a fabric which is 50 percent polyester and 50 percent cotton is classified as polyester.

Fabrics which are 95 percent or more of one fiber are not considered blends. Such fabrics are included in the 100 percent classification for that fiber.

**Units of quantity**—Production is reported in thousands of linear yards except blanketing, which is in thousands of linear yards, 72-inch width or equivalent, and selected items in thousands of pounds as noted.

**Production**—Represents total production of cotton fabrics by all known weaving mills regardless of their primary activity.

**Looms operating**—Represents number of looms operating on the specific fabrics at end of quarter.

**Yarns consumed, loom-hours, and stocks of selected filament yarns**—Represents data for all mills primarily producing cotton broadwoven fabrics.

**Revision to mill assignment data**—Information on loom-hours, yarn consumption, and stocks shown in tables 3, 4, and 5 are not comparable with information prior to third quarter 1972 because of the reclassification of particular mills whose primary activity is now the weaving of manmade fiber fabrics rather than cotton fabrics. An overlap between the old and new mill assignment is available by comparing the preliminary and revised third quarter data as published in this series. It should be noted that the combination of data

shown in this series (MQ-22T.1) and the manmade fiber broadwoven goods report (MQ-22T.2) for yarns consumed by type of mill, loom-hours, and stocks are comparable.

### HISTORICAL NOTES

This survey began in 1943. Historical data may be obtained from *Current Industrial Reports* (called *Facts for Industry* before 1959), available at your local Federal Depository Library.

### RELATED REPORTS

The following is a list of selected current and recent textile reports published by the Bureau of the Census in the Current Industrial Reports series:

Series	Title	Frequency
M22A	Woven Fabrics: Production, Inventories, and Unfilled Orders	Monthly
M22D	Consumption on the Woolen and Worsted Systems	Monthly
M22P	Cotton, Manmade Fiber Staple, and Linters—Consumption, Stocks, and Spindle Activity	Monthly
MQ-22K	Knit Fabric Production	Quarterly
MQ22T.2	Manmade Fiber Fabric Broadwoven Gray Goods	Quarterly
MQ22T.3	Wool Fabrics Broadwoven Goods	Quarterly
MQ22T.4	Tire Cord and Tire Cord Fabrics	Quarterly

Series	Title	Frequency
MA-22F	Yarn Production	Annually
MA-22G	Narrow Fabrics	Annually
MA-22S	Broadwoven Fabrics Finished	Annually
MQ-23X	Sheets, Pillowcases, and Towels	Quarterly

### SPECIAL TEXTILE REPORTS

At intervals of a few years, special supplemental reports on broadwoven fabrics are also published. Recent reports of this type are shown below:

Series	Title	Period Covered
M22T Supp.	Broadwoven Fabrics—Average Weight and Width of Fabric (Cotton, Manmade Fiber, and Wool Fabrics)	First Quarter 1972
MC-22Z	Textile Machinery in Place	1973

### ACKNOWLEDGMENTS

This report was prepared in the Industry Division, Bureau of the Census, under the direction of Robert J. Nealon, Chief, Current Nondurables Branch. Carole A. Klein was directly responsible for the review of the data and preparation of the report. Milton Eisen, Chief of the Division, and James S. Werking, Assistant Chief for Current Programs, provided overall direction and coordination to this project.
